

2.01. WHAT KIND OF ENVIRONMENT DO WE EXIST IN?

Author: [Boreyko V.M.](#)

"Donkeys and scientists - to the center"

Napoleon

"Let's think a little and fix the defect"

Vysotsky

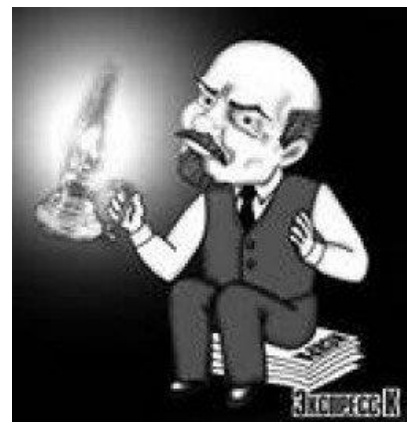

"Ignorance is power"

Orwell, 1984

"Communism is Soviet power plus electrification of the whole country" (V.I. Lenin).

No one has ever thought about this phrase, which briefly and clearly expressed the essence of the centennial program. Electrification was carried out all over the world without communism. There were several programs.

The largest one is 500 years old, according to which conditions should be created for the formation of such a genotype that would be under the full influence of the Interventional Control System.

The sequence of Program execution was recorded by the Interventional Control System to Nostradamus.

At one stage of this program, in 1845, the creation of a radiation web covering the globe was completed, after which only those who could be controlled using the properties of the web and the development program, which would no longer allow a return to other ways of Brain development, should remain on Earth.

People (and animals) who have a connection with such a web are called "electronics".

So, the first goal is that there should be only electronics on Earth, the rest should be destroyed.

To achieve the goal, any means were good - war, civil war, genocide (Yeltsin was especially successful - he imperceptibly significantly reduced the population).

Electronics can be given any command using the web, directed to perform the task.

The Soviet government, or rather, the pyramid of power, should ensure the correction and implementation (pyramid of power) of the presented program. It should be noted that both public consciousness and science began to implement the program at the same time - a ghost appeared in Europe, and scientists rushed to study radiation.

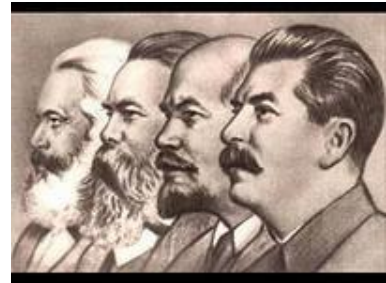

The Interventional Control System selectively provided only the "electronics" with everything necessary, removing the brain from the rest (step by step) and narrowing their range of sensitivity to changes. Those who remained after the purges were to pass away naturally (according to Darwin's theory).

The program also had a completion date of 2012. By this point, the "electronics" would get a new brain, and the rest - all kinds of diseases.

The intermediate formation of genotypes was also subject to destruction - these are mutants from "electronics", having irreversible distortions of the brain matrix, incorrectly understanding commands and incorrectly responding to control requests of the Control System.

We note here that until this date, all work was carried out in conditions of counteraction and possible harm from non-"electronics", because knowledge was given in a distorted form, and did not give an idea of reality. Attempts to find out the truth were stopped at the root.

There were also failures in the Interventional Control System - Stalin, who was not an "electronics man", got into the Marx-Engels-Lenin group, and therefore misinterpreted the work program and, instead of making "electrification", climbed into regions where the density of the control web was not yet sufficient, for which he paid.

Gorbachev managed to correct Stalin's mistakes (by removing weak control zones) and Yeltsin continued to quietly remove part of the unwanted population by the method of "not helping".

However, the development of the program would be accompanied by new knowledge that only "electronics" would possess (at the same time, all mutants, or so-called gutta-percha individuals should be removed). The features of gutta-percha individuals include the presence of frequencies of 39.5 octaves, which misinform the Control System, and in addition, distort technical means (computers, communication systems).

The scientific base for "electronics" was prepared and was waiting in the wings, while it should not be forgotten that the slogan "**no knowledge is power**" was the main one in science, which is common to all, and it should be given credit - one of the main conductors of such a "science" was V.I. Vernadsky. The value of Vernadsky's work lies in the fact that **he managed to combine all the obscurantism** that was not introduced for "electronics" with information taken from the new program and take it so far aside that if the information from the program accidentally turned out to be in the wrong place, it would be impossible to go back.

There were no such geniuses on Earth who would have so masterfully led science into the wilds at a crucial stage of the program. If Marx-Engels-Lenin were only the executors of the program, then problems could arise without Vernadsky. Vernadsky's brilliant works had to be supported until the program was fully completed, no one should know the goals, means, or capabilities of the Control System. To spend energy on achieving goals that do not exist, to disperse attempts to find out the real state of affairs, to increase the number of sheep among scientists - Vernadsky managed to instill all this in the entire scientific world.

And it was not for nothing that Lenin pointed out the great importance of science - the science that was entrusted to Vernadsky. Vernadsky, unlike Lenin, did not prepare murder, genocide, destruction, but he very competently solved the main task - to destroy science.

Humanity will be grateful to Vernadsky as a genius of all times and peoples for his creative approach in solving the main task - to ensure the safety of the program. And this task was honorably accomplished.

The following are some quotes from the book "V.I. Vernadsky. Philosophical thoughts of a naturalist. Moscow. The science. 1988. Publication of the USSR Academy of Sciences".

"And it turned out that we do not have a deeper theoretical basis for all environmental measures than V.I. Vernadsky's teaching about the biosphere and its transformation into the noosphere" (p. 4).

« ... And he (Vernadsky) came to believe that his teaching about the noosphere is consistent with the Marxist teaching about scientific socialism, and the future of the noosphere is closely linked with the spread of communist beliefs" (p. 13).

"For the biosphere is the only earthly shell into which cosmic energy continuously penetrates, cosmic radiation continuously and, above all, the radiation of the Sun, which maintains dynamic equilibrium, organization: the biosphere is a living substance" (p.23).

A brilliant find by V.I. Vernadsky:

"The evolutionary process... he created a new geological force - the scientific thought of social humanity" (p.27).

"Under the influence of scientific thought and human labor, the biosphere passes into a new state - the noosphere" (p.27).

"There is no theory, no exact scientific explanation of this basic phenomenon in the history of the planet" (p.29).

"The creation of the noosphere from the biosphere is a natural phenomenon, deeper and more powerful than human history" (p.35).

"In reality, this unity of man, his difference from all living things, a new form of power of a living organism over the biosphere, its greater independence than all other organisms from its conditions, is the main factor that eventually emerged in the geological evolutionary process of creating the noosphere" (p.42).

"The main geological force creating the noosphere is the growth of scientific knowledge" (p.49).

"For the first time, the task of penetrating scientific knowledge into the whole of humanity is being set" (p.50).

"The course of scientific creativity is the force by which a person changes the biosphere in which he lives" (p. 57).

"Although man is a geologically superficial phenomenon in one of the shells of the earth's crust, a new geological factor,... there is no objection to introducing this factor for geological divisions along with stratigraphic and tectonic ones" (p.58).

"Without the formation of the human brain, there would be no scientific thought in the biosphere, and without scientific thought there would be no geological effect - the restructuring of the biosphere by mankind" (p.59)

"Tens of thousands of generations passed after the appearance of man in the biosphere before his manifestation became noticeable" (p.61).

"To the previously known area of human life (the noosphere), in which science has been developing so far, two new ones have been added, sharply different from it - the world of the expanses of Space and the world of atoms and their nuclei".... (p.74).

"E. Rutherford correctly pointed out that the modern development of physics, which has turned our worldview,... on 9/10 it is obliged to radioactivity" (p.78).

"As we have seen, geologically we are now experiencing the separation in the biosphere of the realm of reason, radically changing both its appearance and its structure - the noosphere" (p.127).

"Living organisms, having metabolism, create their own chemical elementary composition"....(p.177).

(*) You will not find a more stupid formulation anywhere else (***)**

"An empirical generalization, since it is accurately derived from facts, does not require verification" (p.283).

"Until now, the people have not been touched by scientific knowledge" (p.396).

Only a microscopic part of the fundamental teaching is given, Vernadsky can be quoted endlessly, reinforcing the theory with his own observations.

The existing pyramid of science has been created for centuries, and in an epoch-making event - the transition to a new era and a new program, it makes sense to look back and inspect the pyramid, since it simply turned out to be without a foundation.

Our civilization, in the near future, will have to go through its birth.

And, if the "birth" is successful, **the Earthly civilization will reach a new qualitative level of its development, when mentally, only by the power of his thought, a person will be able to influence the ecology of his planet, control the weather, the elements, heal and restore the wounds of nature inflicted by the unreasonable activity of man himself.**

A person will be able to know himself, his own capabilities, the capabilities of his brain. Moving into the past, into the future, in space for billions of light years, will cease to be a "miracle", as some say, or "the ravings of madmen", as others say now...

Over time, it will become as common as flying on an airplane.

All this is still in the future and will become possible only if humanity accepts the **new knowledge** necessary to rise to the next stage of knowledge of nature. If humanity does not accept, does not want to accept new knowledge, **the Earthly civilization will destroy itself before birth, and the "child" will be born dead...**

How so, many will be outraged, because our civilization has achieved great success!.. A man went into Space, was on the moon, and will soon fly to Mars... And in general, science, culture, art, everything is developing so fast, especially in the last hundred years... there was an information explosion... But, do not rush to conclusions, try to **hear** or at least **listen**...

As Christ said: "**Whoever has ears to hear, let him hear!**"

You can cook wonderful food, but if a person dying of hunger does not want to swallow it, it is pointless to swallow food for him - he will still die of hunger...

It is possible **to have knowledge and the desire to pass it on to Humanity**, but if it does not want to accept them in order not to perish, then it remains only to regret it and try to fix what can still be fixed in order to expand the period of time that Earthlings have left to make a decision before they die...

Sleepers, wake up if you don't want this dream to become eternal!.. And if there was still time in biblical times not to wake up the "sleeper", now **there is no time left**. Humanity, in its madness, has approached a critical milestone, already tangible, and not the abstract "end of the world", which has been talked about for more than one century, but it has not come and has not come. And many calmed down and were sure that the "end of the world" would never come. What is this "end of the world", what is a critical milestone in the development of mankind?

You can, of course, call it in different ways, but the essence is not in the name, the essence is in the content. So, what is behind all this? And behind all this is... ignorance, ignorance of the real laws of nature, which have **acted and will act** completely independently of what a person knows about them, how he understands them and whether he wants to understand them at all. The laws of nature will work, but man (humanity) will not be able to live and develop without a proper understanding of these laws. There will simply be no one to develop on the once beautiful blue planet Earth. And there is absolutely no need for a nuclear war for this. If a person continues to "conquer" nature just as thoughtlessly, to interfere in it without understanding the basic laws, then this will lead humanity to **self-destruction** faster than nuclear war.

Remember the words of Christ: "**If a blind man leads a blind man, they will both fall into a pit...**"

Humanity, at one of the moments of its development, went down the wrong path.

Let's remember, Socrates also said: "**Know yourself, and you will know the whole world...**"

Unfortunately, people did not listen - they began to know the world around them without knowing themselves. And their descendants, who followed the same path of knowledge, **today came to a dead end...** No knowledge **can be absolute**, but one road of knowledge can lead to the truth, another -take her away from her. Although, both roads have the same beginning. How to understand which road leads where?!.. Oh, very simple... When a person begins to create the foundation of his understanding of the universe, his mind is not able to give an answer to all the questions that have arisen at once. A person closes these "white spots" with postulates, axioms that make it possible to create a kind of mosaic of the universe. If a person follows the right path of knowledge, the picture of the universe created by him allows him to rise to the next level of knowledge and remove the veil of mystery from a number of "white spots", which allows him to create an even more complete and accurate picture of the universe, etc. In other words, if humanity follows the **right** path of development, as this knowledge develops, less and less **there are fewer "white spots"** - postulates, axioms. If the development has gone the wrong way of knowledge, the **"white spots" will become more and more**, which, in itself, should alert.

There are much more "white spots" in modern science than there were at its birth. And this leads to the fact that more and more experimental data contradict the basic laws of physics, chemistry, biology...

Modern science has approached the edge of the abyss, which scares it itself. In the Middle Ages, **religion was the inquisitor of science**. For a long time, knowledge fought for the right to exist and emerged victorious in this struggle. It is sad to see **modern science as an inquisitor of new knowledge**, a new understanding of nature and its mechanisms...
