

## ENEAGRAMM - 7 and 8008

Author: [Kharyushin D.](#)

All of us, thanks to parents and teachers, at one time learned to count. We started with the basics. One plus one equals two. Two plus two equals four. The laws of mathematical science are immutable in any corner of the Earth. The ability to count helps us in life, sometimes we don't even pay attention to it, as if the ability to count is a matter of everyday life, of course. Take any area of our social structure: shops, transport, home, work, the service sector, and of course, you can't ignore the event - the day of the payday, everywhere we are surrounded by numbers. We use the decimal number system, which uses a set of ten digital characters 0,1,2,3,4,5,6,7,8,9. They are also called Arabic numerals. With this set, you can make a number of any size. For example, one billion can be written in two ways: linearly 1.000.000.000 and to the power of  $10^9$ . In the first variant, two types of digital characters 1 and 0 are used, in the second variant, three characters 1,0,9. We also have to deal with another set of digital signs in life - Roman numerals. Roman numerals can be found in the markings of "antique" watch dials, in the designation of centuries and millennia, in the numbering of chapters in books or in electricians' permits to designate an electrical safety group. To write a number in Roman, you will need not ten, but seven digital characters I, V, X, L, C, D, M.

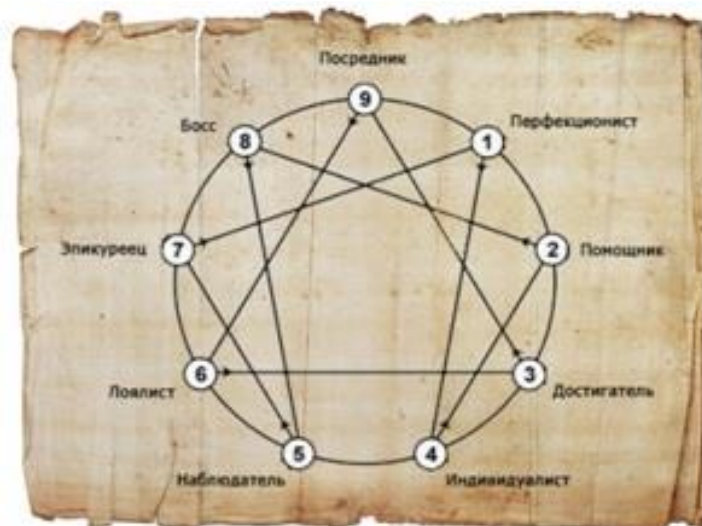

Returning to the ten digital signs, let us recall that earlier in the Old Russian alphabet, each letter had the inherent property of a sign, sound, image, number. The combination of letters gave birth to a word, a cathedral of sounds and an image. In our case, a digit also has the property of being a word, sound and image. A bunch of several digits, even if not a number, but only a chain of interconnected digits can create an image filled with meaning and content. By presenting the numbers as dots and connecting them with lines, we get a certain figure. If a figure is given an image, putting meaning and content into it, it will become a symbol in which a holographic volume with an image and text will appear. Then the symbol will be the key to Knowledge and activation of Consciousness.

Let's take our Russian-"Arabic" ten digits 0,1,2,3,4,5,6,7,8,9 and try to pull them out of oblivion using ready-made symbols. Imagine zero in the form of a circle and place the remaining nine digits equidistant on the circle, denoting them with dots. By connecting the dots with lines in various ways, you can get shapes. Some figures have names. In general, they all fall under the graphic classification with the name "Enneagram". What is this strange exotic foreign word "enneagram"? The Latin dictionary has well preserved the transmission of semantic images in compressed words for many centuries.

The term "Enneagram" comes from two Latin words, enneas — "nine" and gramma — "line", "outline", "record", "letter". The semantic ending of "gram" has been preserved in many words familiar in everyday speech, such as telegram, epigram, phonogram, cartogram and others, in which the transfer of an image is carried out by writing with the help of what is specified in the beginning of the word - card, verse, sound and television waves.

The enneagram is fully understood as the transmission of an image in the form of a figure created using nine lines or nine dots connected by lines placed on a circle.

When you set out to find on the Internet what an enneagram is, the search engine will unilaterally present you with a single figure among the many informational links in the Russian version, something similar to a spider. The Internet will report that the initiator of the popularization of the figure was George Ivanovich Gurdjieff, a philosopher with Greek-Armenian roots, a mystic and a spiritual teacher born in the second half of the 19th century. This knowledge has been hidden from outsiders for a long time, and he is the first who had the honor to reveal it to the general public. He did not consider himself the author of the Enneagram, moreover, he repeatedly stressed that he received this knowledge from some ancient and mysterious source. A transcript of one of the Paris lectures has been preserved, in which Gurdjieff says: "This symbol cannot be found by exploring occultism, either in books or in oral tradition. It was given such great importance by those who knew it that it was never published or transmitted in its entirety."

1- Perfectionist, 2- Helper, 3- Achiever, 4- Individualist, 5- Observer, 6- Loyalist, 7- Epicurean, 8- Boss, 9- Mediator

In the current philosophical concept of representatives of the occult and esoteric sciences, the enneagram shows the Law of Seven and the Law of Three in a single symbol. The figure consists of 3 parts: a circle, an inner triangle (connecting 3-6-9) and a so-called six-pointed "star" (connecting 1-4-2-8-5-7-1). The circle symbolizes integrity, the inner triangle symbolizes the "law of three", and the six-pointed figure symbolizes the "law of seven". First of all, for Gurdjieff, the enneagram is a sacred universal symbol in which the great cosmic laws governing the universe are encoded; the blueprint by which all phenomena and processes in the universe are built; a source of wisdom that can explain anything and everything to anyone who can read it.

By the 70s of the 20th century, the enneagram had formed as a model reflecting the basic personality types (enneatypes) inherent in a person and the relationship between them.

What Wikipedia declares: "The enneagram describes nine personality types and symbolizes the equal contribution of each personality type to the creation of a holistic world. The types are interconnected not only by a circle, but also by so-called "arrows" - a complex internal figure inscribed in a circle. The arrows symbolize changes in people's behavior in a situation of stress and in a situation of psychological comfort."

Spiritual teachers, heirs of the founders of esotericism continue to engage in educational activities, caring for the uninitiated, ignorant of mystical teachings of people. In addition to creating schools, circles, sects, orders and other groups, magicians, charlatans, mystics and other gurus do not neglect to engage in additional writing craft. The proof of this is the presence of many books on the shelves of bookstores with esoteric themes.

THE WISDOM OF THE ENNEAGRAM - "The magic power of the Enneagram" - ASTROLOGY AND THE ENNEAGRAM - ENNEAGRAM

According to what the virtual space offers and based on the literal semantic meaning in the word "enneagram", the question arises whether the enneagram discussed above is the only one? If read as "nine lines plus an image in a circle", then the enneagram should include geometric figures from the category of symbolic stars "The Star of Ingliia and "The Nine-pointed Star".

Энеаграмма №1 «Звезда Инглии»	Энеаграмма №2 «Девятиконечная звезда»	Энеаграмма №3 (Г.И. Гурджиева)	Энеаграмма №4 (Николы Тесла)
			

Enneagram No 1 "Ingliia Star" - Enneagram No 2 "Nine Pointed Star" - Enneagram No. 3 (G.I. Gurdjieff) - Enneagram No. 4 (Nikola Tesla)

Star of Ingliia – Nine pointed star  
Level 3, level 2, level 1

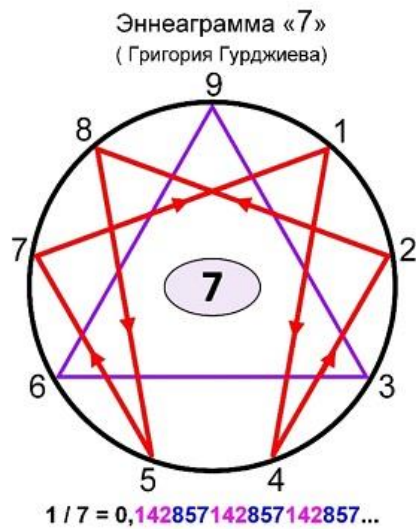

Enneagram number 4 is known to us as the symbol 369 of Nikola Tesla. It is impossible to answer unequivocally, having information of general access, what relation Nikola Tesla had to the enneagram. It is partly explained by the presence of the number 369 in the graphic image and his famous statement about cognition of the laws of the universe with the help of the numerical key 369. Nikola Tesla himself, a Serb by birth, was born in the Croatian village of Smiljan in 1856. He later became a world-renowned inventor in the field of electrical engineering and radio engineering. Ten years later, Grigori Gurdjieff was born. To both of them the present-day attributes indirect authorship of the two images, which with their outward resemblance and number of similar figures, have a significant difference in the functional filling of the symbols. Naturally they are distinguished by the hexagonal figure. Gurdjieff has a figure with "legs", while Tesla has a figure with "wings". The lines are drawn in a sequence from number to number "1-4-2-8-5-7-1" (with Gurdjieff) and "1-2-4-8-7-5-1" (with N. Tesla). Conventionally, each sequence is assigned a six-digit code "142857" and "124875".

The period with the code "142.857" occurs when dividing one by seven, which in a decimal fraction is repeated every six digits

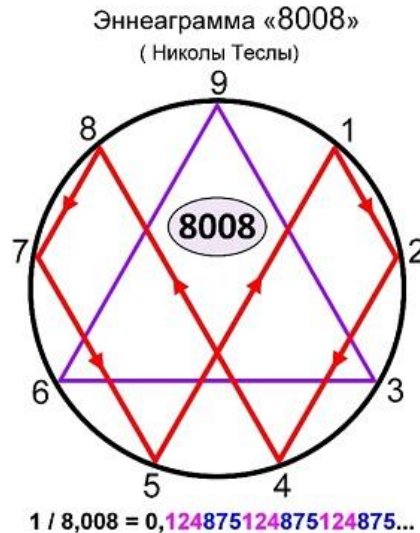

$$1/7 = 0.142857142857142857142857142857...$$

The period with the code "124.875" occurs when dividing the unit by 8.008, which is also repeated in decimal every six digits

$$1/8.008 = 0.124875124875124875124875124875...$$

Enneagram "7" (Grigory Gurdjieff)

- Enneagram "8008" (Nikola Tesla)

The number 7 is the base number for the formation of the Gurdjieff enneagram. Most likely, the number 7 has a direct connection with the name "Law of Seven", rather than a closed chain of seven digits "1-4-2-8-5-7-1" or an octave of seven notes. Grigory Gurdjieff considered his enneagram a symbol of a number of hidden laws of the Cosmos. It is quite possible that he knew the repeating cycle of the digital code formed when dividing one by seven, which is displayed in a hexagonal figure, but emphasized the mention of seven in the Law of Octaves (the Law of Seven).

In the case of Nikola Tesla's enneagram, the number 8008 served as the basis for the emergence of the six digital figures. The inverse value of the number 8.008 from the digits forms the digital code "124.875". The question arises regarding the "wing-shaped" figure, if we discard the method of education using the number 8008, about which there is no word on the Internet, how and on what basis did it arise? Here seekers of knowledge of the truth unanimously agree that the method of obtaining a figure "with wings" was the result of displaying consecutive numerical values of the function  $f = 2n$  through digital roots.

$2^0$	$2^1$	$2^2$	$2^3$	$2^4$	$2^5$	$2^6$	$2^7$	$2^8$	$2^9$	$2^{10}$	$2^{11}$
1	2	4	8	16	32	64	128	256	512	1024	2048
1	2	4	8	7	5	1	2	4	8	7	5

When translating all the values of the function  $f$  into digital roots, a six-digit cycle of 1-2-4-8-7-5-1-2-4-8-7-5 is formed...

FREQUENCY OCTAVE  $2^n$   
 ENNEAGRAM - frequency  $2^n$  in digital roots  
 Octaves 1-12

In the New Knowledge, the function  $f = 2^n$  or the Octave function is presented as a fundamental characteristic of oscillatory processes with different frequencies, which are classified by an octave value. Octave is a formula expression of frequency with base 2 ( $f=2^n$ ). The power  $n$  of the number 2 is an octave. Imagine a wave having 2 oscillations per second. The frequency of this wave is the 1st octave.

1st octave - 2 vibrations per second ( $2^1=2$ )

2nd octave - 4 vibrations per second ( $2^2=4$ )

The 3rd octave is 8 vibrations per second ( $2^3=8$ ) and so on.

$2^n$  is a power (exponential) function with base 2, a doubling function, or you can also call it a function of life, birth. There are some patterns that occur in the universe, patterns that are found in life, the galaxy, stellar cathedrals and natural systems. There is one really very important system that nature seems to obey - these are the "Forces of Binary Systems", in which the pattern begins with one and continues with the doubling of numbers. In fact, this is a "binary" series, when each next number after one is the sum of the previous number with itself  $2 = 1 + 1$ ;  $4 = 2 + 2$ ...

Living cells and embryos develop according to this sacred scheme: 1, 2, 4, 8, 16, 32, 64, 128, 256 ... At the first stage, when an egg merges with a sperm, a zygote cell appears - the first living cell for a future multicellular organism. Then the cell divides and two identical cells are formed. At the next stage, the cells divide again, forming four of the two, as in a binary sequence: 1-2-4-8-16 and so on. Without pretending to know the truth of the created formation of a certain Construct based on Platonic bodies in the process of copying the likeness of myself, starting from the first cell, I will express an interesting version of the qualitative transition of the flow of one form into another.

At the initial stages, the following scheme of transformation of forms is formed. In short: the zygote cell begins as a sphere, doubles and at the stage of four cells passes into a tetrahedron, then passes into two interpenetrating tetrahedra, forming a stellate octahedron of eight cells. Further, if we rely on the materials of the "Constructive Theory of Everything", when the process of improving and complicating the forms of the external Construct of the energy lattices of matter occurs, at the stage of sixteen cells, the transformation from a stellate octahedron into the form of a stellate decaexiahedron takes place. With the number of 32 cells, a form conditionally close to the construct of a stellate triandasiohedron arises, and further, as the number of cells increases, the symbiosis of cells again takes the form of a somewhat flattened sphere, where at the 512 cell stage it becomes a torus, after which the process of cell formation begins in the image and likeness of the future organism. I will make an addition regarding the volume in the process of division. The human zygote will not change its size during the first nine cell divisions (up to 512 cells). Then the volume increases, the cells begin to form according to the functional endowment, increasing in size. The very process of birth and development of life symbolically lies in the enneagram of Life (Nikola Tesla) with the code "124.875".

### 7 and 8008

- The common digital root of these numbers is 7;
- The difference between the numbers 8.008 and 7 gives the number 1.008, where 1.008 today is the clock interval of oscillations of the Earth's Control System, established on 25 December, 2012 at 01:15;

"The clock cycle is just one physical indicator, the template relative to which all other frequency characteristics are calculated. There is a clock cycle of 1.008. It coincided with the frequency of charge fluctuations along the energy grid of one chemical element. And this chemical element is taken as the basis of this template. With respect to this chemical element, an increase or change in the frequency characteristics of the remaining chemical elements is built up." (B.V. Makov)

- The New Knowledge from the Research Institute "TSUS" contains information about the Design of energy grids of the Atmosphere with a layered arrangement relative to the conditional zero level of the water area of the world's oceans. The figure shows the layer under No. 7 in the altitude range from **8,800 m** to **12,400 m**.

## PLACEMENT OF ATMOSPHERIC GRIDS

<b>12</b>	<b>450,000 m – 128,400 m</b>	<b>LAYER OF FORMING A NEW STATE OF LAYERS BY EXTERNAL INTERACTION</b>
<b>11</b>	<b>127,600 m – 450,000 m</b>	<b>LAYER OF FORMATION OF A NEW STATE OF PROTECTIVE LAYERS OF THE ATMOSPHERE FROM EXTERNAL INFLUENCES</b>
<b>10</b>	<b>62,400 m – 127,600 m</b>	<b>LAYER OF FORMATION OF A NEW STATE OF PROTECTIVE LAYERS OF THE ATMOSPHERE FROM EXTERNAL INFLUENCES</b>
<b>9</b>	<b>23,100 m – 62,400 m</b>	<b>ANTI-GRAVITY FORMATION LAYER</b>
<b>8</b>	<b>12,400 m – 23,100 m</b>	<b>PROTECTIVE LAYER OF THE ATMOSPHERE</b>
<b>7</b>	<b>8,800 m – 12,400 m</b>	<b>LAYER OF MATERIALIZATION (INSECTS, FISH, CLAY, STONES, "CHEBARKUL METEORITES", UFO'S)</b>
<b>6</b>	<b>6,400 m – 8,800 m</b>	<b>STORAGE LAYER FOR ALL KINDS OF HUMANOID INSECTS</b>
<b>5</b>	<b>1,200 m – 6,400 m</b>	<b>ACCUMULATIVE LAYER OF THE ATMOSPHERE</b>
<b>4</b>	<b>0 m – 1,200 m</b>	<b>BASE LAYER OF THE ATMOSPHERE</b>
<b>3</b>	<b>-1,200 m – 0 m</b>	<b>A LAYER OF 1200 METERS DEEP OF WATER</b>
<b>2</b>	<b>-2,200 m - -1,200 m</b>	<b>HYROPHONE LAYER WITH ATMOSPHERIC CONTROL SYSTEM</b>
<b>1</b>	<b>-4,400 m - -2,200 m</b>	<b>ATMOSPHERIC BRAIN LOCATION</b>

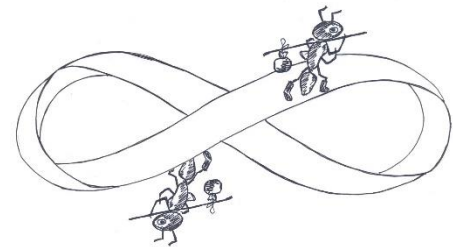

The considered numbers **7** and **8.008**, as well as 124 as part of the cyclic remainder of the inverse number 8.008: **124875**, fit into one line at once.

### 8 in 8008

- In Elementary Music Theory, the octave is denoted by the number 8.
- The fortepiano and piano have 88 keys;
- There are only 8 triangles in N. Tesla's enneagram.
- The result of the multiplicity of the number 8008 by 8 coincides with the title of the series of Arabic fairy tales of Scheherazade "One Thousand and One Nights";

— If you start moving along the Mobius strip, laid out in the form of a figure eight, and before returning to its original position, you must make the path along the figure eight twice.

8008 - partly understood by the words from the texts of the Emerald Tablet of Hermes Trismegistus: "True without any falsehood, authentic and supremely true. That which is below is analogous to that which is above. And that which is above is analogous to that which is below, in order to realize the wonders of the one thing."

There is a phenomenon of identical twins in the environment of the sacrament of childbirth - their mirroring. This can be noticeable during an external examination (one has a mole on the left cheek, the other on the right) or even in the location of internal organs (for example, the heart of one of the twins may be on the right), often one of these twins is left-handed, and the other is right-handed. Homozygous twins look very similar to each other (have a portrait similarity) and are always of the same sex. Their blood type is identical. During their life, they maintain a close connection at the level of metabolic processes and psychosomatics, even when they are far from each other. If one gets sick, being hundreds or even thousands of kilometers away from the other, then the second one begins to feel it and may get sick with the same disease.

In addition to the internal connection between people, there is a mysterious inexplicable connection at a deep level between a person and his favorite everyday thing, which he often uses. When a son or husband went to war or on a long trip, they left at home something that belonged to this particular person and which he often used. Relatives, looking at this thing, for example, a knife, found out about the state of a person there in the war. So, if the knife blade suddenly rusted, it meant that the person died, and if it was covered with some other coating, then something bad happened to this person, but not fatal, for example, a wound. This amazing property was noticed by ancient people and used as an informant.

People's attention and observation are not the cause of the omens, but the result of the people's wisdom. Folk signs are wisdom accumulated over centuries. Now this wisdom is confirmed by science. Quantum mechanics explains the behavior of interacting things by the fact that there are paired particles in the microcosm, they are almost the same, they differ from each other only in spin - the direction of rotation. They are called entangled particles. Scientists note that if the same particles fly apart from each other, then there continues to be a connection between them. And if one particle changes, then the other will also change instantly, although it may be located at an arbitrarily distance.

Thus, 8008 is perceived both as a mirror image and as a direct connection in the interaction of objects of being.

### **Number 124**

A special status is acquired from the enneagram "Star of Life" (N. Tesla), the number **124**, which is repeatedly mentioned when studying the materials of New Knowledge:

— Lifetime is set by the lymph sweep octave, during the formation of the ionic structure, and by magnetic pulses with corresponding sliding angles. The relationship between time and space in a living cell is determined by the sliding angle, the values of this angle are from 21.60 to 43.50 and determine the lifetime from 0 to 32,000 years (on the Earth time scale). The middle point corresponds to **124 years** of life;

— **124 types of bone structure** in our bone helmet (skull);

— “In the periodic table there should be **124 chemical elements**, instead of the existing 118. 6 chemical elements are missing. They don't exist yet. They will appear soon. And when they appear, then science will find them.” (B.V. Makov)

- In the solar system, 2 pi numbers are used: 3.000864 ... (**124 decimal places**) and 3.1648 .... (**124 decimal places**);

— The System of complexes on Earth for monitoring and changing surfaces on land and in the oceans is **124 complexes**, including Stonehenge;

— The speed of computer processing of object 440 (UFO) **124** terahertz;

— To date, the time clock for the course of human metabolic processes has a range of 1.008 - **1.24 seconds**;

— During lethargic sleep, body temperature = **12.4<sup>0</sup>**;

— The maximum free fall acceleration within the solar system is **12.4 m/sec<sup>2</sup>** at 56.97501250 octave, which corresponds to the "edge" of the system;

— Before the capture of mankind by the Ebrov civilization, more than 18 thousand years ago, **1,240 million** people lived on Earth. After the change of the system power on 04/24/2011, the Native Earth Control System planned to create all the necessary conditions for life support and life support for the revealed entities in the amount of about **1,240 million**;

— Atmosphere layer No. 3 from 0 meters to **1,240 meters**;

— For **12,400 years**, there were several attempts to create people from spiders, all ended unsuccessfully;

### **Mathematical Mind Games**

The cyclic residues of the inverse numbers 7 and 8.008 do not have the number 9, but under certain mathematical operations, the number 9 appears. It is believed that the number 9 is the number of the Universe, the highest number of the digital series of the decimal number system.

Cyclic remainder of the inverse number 7: **142857**

Cyclic remainder of the inverse number 8.008: **124875**

**124875** → 124 + 875 = **999**

**142857** → 142 + 857 = **999**

**142857** → 14 + 28 + 57 = **99**

**124875** or **142857** → 1+2+4+5+7+8=27 → **9** (digital root)

-----

**124875** →  $7 \times \frac{124}{875} + 8,008 = 9$  Two numbers 7, 8.008 and the cyclic remainder "124875", of the inverse number 8.008, participate in this operation when forming the number of the Universe.

$$7 \times \frac{124}{875} + 8,008 = 9$$

The sign  $\rightarrow$  is three digits "9", i.e. – 999. The symbol of "nine" is the promotion of energies "for bestowal", symbolizing "daily bread from the Almighty" (the "six" spins of energy "for consumption", is a symbol of "ego"). Each petal of the symbol comes out 1200, which in simple addition gives – 3. It also symbolizes the "trinity": a Suprasystem, a System and a Subsystem, which is the meaning and essence of the Material World.

$$(142857 - 124875)/(3+6+9) = 999$$

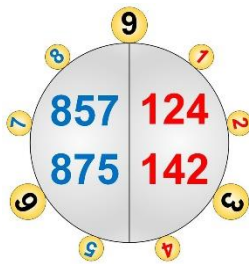

$$(142857 - 124875)/(1+2+4+5+7+8) = 666$$

As we can see by the example of two arithmetic operations, the figures "124875" and "142857", without the central figure "369" from the Almighty, work for consumption, spending their own potential. Only the Almighty "369" allows the figures to exist indefinitely.

In the following examples, in order for the number 124875 to become a round number 125000, 125 is not enough. Accordingly, in order for the number 142857 to become a round number 143000, 143 is not enough.

$$124875/125 = 999$$

$$142857/143 = 999$$

Numbers 124 and 142 in the enneagram occupy the right half, and numbers 857 and 875 occupy the left half. The difference between the paired numbers of the halves is the number 18.

$$142 - 124 = 18 \text{ и } 875 - 857 = 18$$

The difference is what distinguishes objects from each other. What distinguishes (124,142) and (875,857) is the number 18, which is the sum of the missing numbers 3, 6, 9.  $18 = 3 + 6 + 9$ .

George Gurdjieff and Nikola Tesla are not the authors of the enneagrams created by the numbers 7 and 8008. They were only the conduits through which the symbolic representation of the laws of the Cosmos was established. There are no winners or losers, just as there are no pluses or minuses in each author's enneagram. Each enneagram is good in its own way, and filled with its own inner meaning.

The only difference is in the different approach and interpretation of the reading of the symbolism of the row of numbers 1,2,4,5,7,8. N.Tesla's Enneagram is more saturated with information density.

**2021 - 2023. Dmitry Kharyushin**
