

In the beginning there was a word, and it was a Russian word

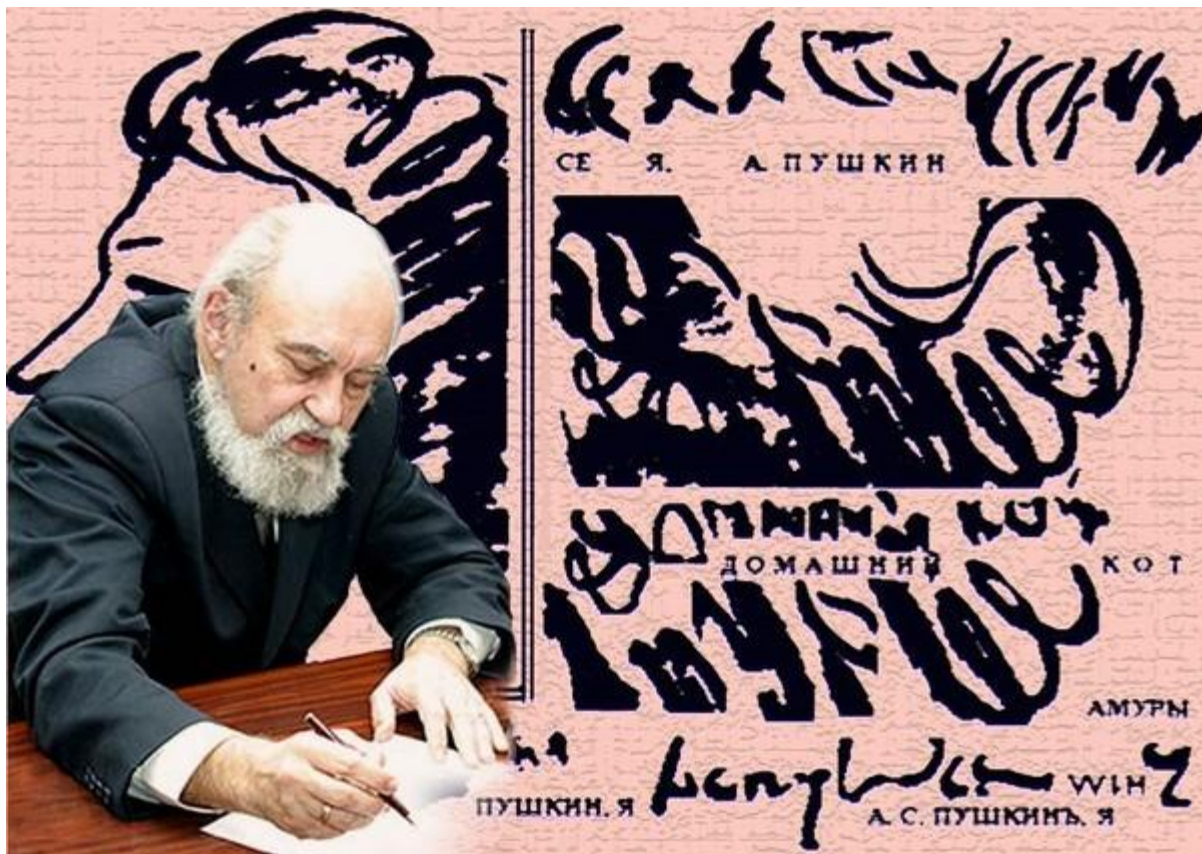

(Reflections on a given topic)

Every article is interesting primarily for its novelty, a new look at known issues and the fact that it not only answers some questions, but also poses new ones, the answer to which contribute to the development of Man, because he tries to find answers to questions.

Questions of language, in our time, is perhaps one of the pressing problems that must be addressed first. Language is not only a means of communication, but it is also the richest means for reflecting the real reality, it is also the true chronicle of the people, because nothing so forms the "soul" or mentality of the people as language. It should be remembered that language, as a system, also develops according to certain laws.

And if our "friends" give 1000 years to the formation of our self-consciousness, then the Russian scientist V. A. Chudinov, Ph.D., chairman of the commission on the history of culture of Ancient Russia, the Council on the history of culture under the Presidium of the Russian Academy of Sciences, an expert on the Slavic runica, showed that **the only language of Mankind** during the great time of human existence (from two million years (according to the development of the structure) back to five thousand years ago) there was a single language of Mankind, which with good reason **can be called the Russian language**.

And now, for the **Russian language**, a special time has come, as writes in his article "RUSSIAN LANGUAGE - IT IS TIME" SvetL "- to help ...", <http://www.liveinternet.ru/users/2979159/post321236698/> affecting many questions, F.D. Shkrudnev: "In 2013, Russian came out on the second place among the most popular languages of the Internet" [27]. And this is no coincidence. There are no random processes in the world, they are all controllable.

А ¹ Азъ (а) Бог, живущий и сотворяющий на Земле, Я.	Б ² Боги (б) Множество Богов; Божественное; превосходящее.	В ² Вѣди (в) Мудрость на Земле и Небесах ведаю.	Г ³ Глаголи (г) Передана мудрости; движение, истечение; поток, направление.	Д ⁴ Добро (д) Развитие; достаток; накопление; полнота; преуспевание.	Е ⁵ Есть (е) Пять элементов жизни, форма жизни; бытие.	Є Есмь (ие) Связка; определение; разнообразие.
Ж Животъ (ж) Жизнь многогранная; зарождение; эволюция; рост, преобразование.	З ⁶ Зѣло (з) Неизведанное; сверх; очень; весьма; не познанное нами.	З ⁷ Земля (з) Земля (небесное тело); почва; форма жизни.	И ⁸ Иже (идолгая) Соединение; единство; равновесие; истина (бытийная).	І ¹⁰ Іжеи (и - ровное) Истина (Вселенская); уравнивает.	Ї Їнитъ (и - полукраткая) О б щ и н а ; истина (общинная).	Ѡ Гервь (гз, ха) Прекрасное; необычное; душевное.
К ²⁰ Како (к) Объединение человека со Вселенной; объёмность, объём.	Л ³⁰ Людѣ (л) Объединение мироу мышления; общность; сопереживание объёмов.	М ⁴⁰ Мыслитѣ (м) мышление; мысль; мудрость; думать; общаюсь; движение; улучшение.	Н ⁵⁰ Нашъ (н) то, что было известно нашим Предкам; то, что существует при нас (наше).	О ⁷⁰ Онъ (о - дальне) Бог; нечто, нечто самостоятельное; форма, структура.	П ⁸⁰ Покои (п) Бездействие; подвешенное состояние; покой; гармония.	Р ¹⁰⁰ Рѣци (рѣ) Речь; изречение; течение; сила (энергия); разграничение.
С ²⁰⁰ Слово (с) Мысль трюмоновкая; поток; соединительная форма.	Т ³⁰⁰ Тѣрдо (тз) Утверждённое свыше указание; определённая форма; утверждение.	У ⁴⁰⁰ Укъ (у) Зов, посланка; взаимодействие; нахождение; род; форма приближения.	Ѹ Ѹкъ (Ѹу) Чувствительность; у с т о и ; определённая форма.	Ф ⁵⁰⁰ Фѣртъ (ф) Гордость; благородство; значимость.	Х ⁶⁰⁰ Хѣръ (х) Мировое равновесие; пересечение определённых значений; гармония.	Ѡ ⁸⁰⁰ Отъ (от) До сей поры; окончательный результат; предел.
Ц ⁹⁰⁰ Ци (ц) Целеустремлённость; цель; высшая структура, определяющая цель.	У ⁹⁰ Уервь (ч) Красный, красивый; грань, рубец, черта.	Ш Ша (ш) Тишина; простор; ширь; объёмное распространение.	Щ Шта (шт) Плотность; разнообразие; неопределённое состояние; защитная форма.	Ъ Еръ (о - краткое) Твёрдость; сотворение в процессе действия; действие.	Ы Еры (ы - мягкое) Единство соединения; множество; множественное действие.	Ь Ерь (ѣ - краткое) Существующая жизнь; Богом данная; законченное творение.
Ѣ Ять (ие) Божественная связь; взаимосвязь небесных и земных структур.	Ю Юнъ (ю, ѳ) Сопереживание; взаимосвязь по касательной; прикосновение.	Ѧ Аръ (а - краткая, я) Образ одного рода; однородная структура.	Є Эдо (ие - краткая, э) Прикосновение к целому; форма познания.	Ѡ Омъ (ом, о - мягкая) Сияние; созидание.	Ѡ Енъ (е - носовое) Он; структура, определяющая восходящий образ.	Ѡ Одь (о - носовое.) Богатство, передаваемое по наследству.
Ѧ Ѧта (ѣ - краткое носовое) П о з н а н и я (указывающая форма).	Ѧ Ѧта (о - краткое носовое) Приобщение к наследию.	Ѧ ⁶⁰ Кси (кс) Дух, духовность; духовное.	Ѧ ⁷⁰⁰ Пси (пс) Душа и всё, что к ней относиться.	Ѧ ⁹ Фига (ф - мягкая) Единство духа; природа; слияние.	Ѧ Ижица (й, у, ю, я, ѳ) Движение; гармоничное состояние; благодать.	Ѧ Ижа (й) Мера времени; краткость.

It is no accident that Cyril and Methodius left only 49 letters out of the 54 letters of the old Slavonic alphabet, removing letters from it that were not present in the Greek language. And these letters conveyed nasal and throat sounds. Losing them, the Rus people gradually lost their throat singing and a special vibration of the vocal cords. And the absence of nasal sounds, which when pronounced stimulated the pituitary gland, negatively affected the functions of the pituitary gland. And he, by the way, is the center of the WILL.

In addition, nasal sounds, or nasal twang in pronunciation:

1) opens the Eustachian tubes in the head, giving the ability of clairvoyance;

2) and activates the simultaneous work of both hemispheres of the brain (the modern education system is built on the work of the left hemisphere only).

It is no accident that the anti-scientific term "Indo-European peoples, languages..." has long been introduced into science. There is no such people. There are the Dravidian Hindus, who unite the Nagas and Dravidians belonging to the Negroid group of peoples – the black race, and there are the Europeans – representatives of the white race.

It is worth recalling N.V. Levashova, who wrote in his book "Russia in Crooked Mirrors" that after the second trip to Dravidia (Ancient India), which took place in Summer 3503 from S.M.Z.KH or 2006 AD Slavic-Aryans who spoke the Old Russian language ([1]), the Vedas were transferred to the Indians - the basic knowledge and language. Over time, the Old Russian language among the Indians became Sanskrit (itself hidden). This is also claimed by B.V. Makov in "Fundamentals of the Formation of Humanity" (Appendix 4), who writes: "Let's leave Latin and Greek aside, since it is still the same Hebrew language, and stop at Sanskrit - the ancestor of the Indo-European family of languages.... **"...Sanskrit itself has Hebrew linguistic roots"...** **"let's go deeper into Sanskrit, which is the same as the Hebrew language. So, "PRA", "Pro" (pra, pro), generally speaking, is a commodity in its very first sense, then passed into the meaning – property."**

After the Exodus from India, the Hyksos (ancestors of the Jews), a gray sub-race, took Sanskrit as their language, which they eventually transformed into Hebrew, which retained only 22 letters from Sanskrit. Similarly, the Britons, as noted by A. Dragunkin, removed the suffixes from our language and replaced our alphabet with the Latin alphabet, leaving 26 letters.

For four thousand years, Sanskrit, "frozen" (forbidden to make any adjustments to the grammar and pronunciation of words) among the representatives of the highest caste of Hindus, actually turned out to be an old Russian language, 70% of the words of which have been preserved in modern Russian. However, over the millennia this relationship was forgotten, especially after the collapse of the Slavic-Aryan Empire. This had such a strong impact even on native speakers of the ancient language that its representatives – linguists - prefer to "touch" the history of their language very carefully, inventing various compromise terms such as Indo-European languages, Indo-European peoples. **Here are a few words in Sanskrit and modern Russian:**

Русский	Санскрит	Русский	Санскрит
Матерь	матрь	брат	бхратар
Праматерь	праматрь	братство	бхратрътва
Сын	суну, суна	деверь	деварь
Сноха	снуша	зять	джата, джати
Свояк	свака	свойство	сватва
Тата, тятя	тата	жена	джани

English translation:

Russian	Sanskrit	Russian	Sanskrit
Mother	mother	brother	bhratar
Foremother	grandmother	Brotherhood	bhratrtva
Son	sunu, suna	brother-in-law	maiden
Daughter-in-law	snusha	son-in-law	jata, jati
Brother-in-law	bitch	property	svatva
Tata, aunt	tata	wife	jani

Durga Prasad Shastri, a Professor of Sanskrit at Delhi University, writes that "the Russian language is more ancient than Sanskrit, and is the oldest dialect of Sanskrit." Most likely, a scholar who studied Sanskrit and knew that it was brought to India by the Russians, as well as that it is 70% similar to Russian, considered that the latter is one of the varieties of even older prasanskrit.

FIG. 5

As a result of his research, Professor Chudinov comes to the conclusion that the Slavic writing system and, above all, the Russian writing system has existed for at least several tens of thousands of years. "It is now quite obvious," says Chudinov, "that our ancestors for many millennia had a tradition of writing, very thoughtful and perfect in their own way - and this at a time when most European peoples could not write and read" [2].

One of the goals of the author of the article is to show the role of CPS in the management of processes on Earth and the role of language in this process, especially in the current period – the transition from parasitic CPS to Native, non-violent CPS (Earth Management System).

Рис. 7

With the transition to the Native CPS, the octave in which the Brain should perceive its commands changes, and the language changes, as well as the genotypes of the Brain.

One of the keywords of the article: "Everything happens in public and not in public. But no one can stop processes that are already running.

Yes, and these processes are manageable. This is a kind of self-defense of an intelligent civilization in the form of CPS. Obviously, more than one civilization perished at the initial stages of its development, without reliable protection. And this protection was created by more advanced civilizations.

And this is possible because the world is created according to uniform laws, which at a certain stage of development can be known and used for their own planned non-violent development. But that doesn't mean that CPS has to solve all the personal problems for every Earthman. It provides freedom of choice.

However, there is a category of people who believe that if they read Levashov, Khatybov and Makov, the CPS will provide them with a ticket to the "White Steamship". **Here it is easier to answer in the words of Vysotsky V.:**

But if an oak is like a tree, you will be born a baobab.

And it will be a baobab for a thousand years until you die.

No CPS, no God or Hero will solve our problems with our brains for us. Everyone should use the chance given to them to develop themselves in order to be integrated into the future. Nothing else is given.

The article notes that "the Brain receives information in musical sequences and converts it, using its translator, into a text sequence."

Therefore, our language is not just a set of words, but a certain sequence of sounds arranged in a row according to certain laws of harmony, on which the entire world around us and our receiver - spine are built.

We will also touch on such a question as the energy of letters. We remember that the Cyrillic Alphabet had 49 letters, with 19 vowel letters. According to physics, our vowels are energy, while consonants take energy, especially explosive ones. The more vowels in the language, the more energy the people have.

So, as a result of all the reforms of the Alphabet, almost 50% of the vowels were reduced: out of 19, 10 remained, even 9, because the letter E is not printed in the hope that in 2-3 generations it will leave the language, like the long – suffering Yusa, which were very important letters (Yusa, justice, align, single-root words). They transmitted nasal sounds, the vibration of which was the highest and reached the highest layers of space.

Work with linguists and mathematicians at Moscow State University have shown that the structure of human speech, book text, and DNA sequence structures, i.e. chromosomes, are mathematically similar. This proves that the Human body can be influenced through language. These facts were discovered relatively recently, and they immediately tried to use them in works that aim to change the consciousness of a person, regardless of his will, i.e. with the purpose of controlling it.

The fact is that the Alphabet is not just a list of letters that reflect the sounds that exist in the language. This is an intra-natural code, the electromagnetic matrix of which is 30% common to humans, animals and plants. This is proved by the works of academicians P. P. Garyaev (1997), G. I. Shipov and A. E. Akimov. The letters of the Russian Alphabet are like physical signs that have their own geometry and mathematical formulas. **The letter is the geometry of the sound.** The Russian language has always been figurative. Our words preserved the image, the essence of nature. Figurative (sloganistic) construction of ancient thought-language involves a lot of words - synonyms and variants of the assembly sequence, because the task of the brain is to draw a holographic image of an object that is understandable. But this is not the end of our brain's capabilities.

The article presents the perspective of our development and the significance of the Complex "SvetL": "However, today we have to MOVE from HOLOGRAPHY (one of the "remarkable achievements of modern science and technology". Holograms have a "unique property - to restore a full-fledged three-dimensional image of real objects") (of a holographic image) **to a visualography – a figurative multi - SPATIAL display of any information** (what N. Levashov and A. Khatybov spoke about) - **through the function of the BRAIN**. Here is the "BENEFIT" of the SvetL Program.

SvetL Programs are aimed at harmonizing our essence, and therefore its proper development, regardless of the owner himself, his location and preparedness for ongoing changes in the environment. In other words, this is another chance for self-development.

Referring to countries that use Chinese characters, you can mark one of their features of their cognitive features. Their people remember graphic information well, but they solve problems through compromises (typical for designers), without understanding the meaning of contradictions. I had to spend 4 hours explaining to Chinese doctors of technical Sciences how I solved the problem of electrolyzers in an aluminum plant. They could not understand why a graphite electrode should be both short and long at the same time. They liked the decision, but they did not understand the course of the decision. Why? – they also studied dialectics... A week later, the answer was found by a friend who read a book about Asian thinking.

Delving into **the physics of the process, the Russian scientist A. M. Khatybov** writes that "any form of life requires support for frequency balance, and this support is provided on a temporary or permanent basis (System)."

Biostructures on any celestial body have only the frequency spectrum provided by the System. This frequency spectrum is provided either by UFOs (a dome is created inside which the life of the biostructure is provided, for which the frequency balance is unique).

Evidence about the effect of a certain frequency spectrum on living things was given by academician P. P. Garyaev in his work "Wave Genome", which describes numerous experiments: 90% of dead wheat grains came to life from human speech and all experimental seeds died from the Mat! At the same time, the result was striking in its stability and repeatability. Everyone saw a video of N. Levashov, where he spoke about the role of Mat in language and its impact on humans, water, etc.

Our speech is also a certain spectrum of frequencies. And it is no accident that in poetry we easily perceive those poems that are "musical" and obey a certain rhythm. That's why there is rhyme in different forms. For example, the preferred sizes of Pushkin's poems tend to be numbers 5, 8, 13, 21, 34, 55... And this is the Fibonacci series. Moreover, poems also have their own musical rhythm, which has an aesthetic and emotional impact on a person.

Even "white" poems, pronounced in a certain key, rhythm, are listened to with pleasure. And ordinary prose, read with expression, in a certain key and with a certain timbre, is perceived as poetry.

It is known from life that the language is divided. But despite the number of Chinese, the development and richness of the Russian language, the old CPS chose English as the command language. This is no accident. The parasitic system was actively introduced primarily among the Anglo-Saxons, i.e. in Western Europe, where development followed a technocratic path – in fact, a dead end, as is the purely contemplative path of development (yoga). Russia does not count (it went two ways), because Russian thought before Peter's reforms was based on "Russian cosmism" (now it is called system analysis), and this did not fit into the technocratic path of development, **because the EBRA are more left-hemisphere creatures**, and therefore good inventors-destroyers. English, as more informational, "circumcised" and poor language, was best suited for the role of a command language.

By the way, from the experience of working with children; in Russian children, the right hemisphere, associated with imagination, imagery, sensuality, etc., and the left hemisphere work well, but without logic, brought to the emasculated formalism.

And, as noted in the article, the redundancy of Russian as a command language is zero, i.e. it can be used completely. The richness of the language itself gives a huge opportunity to manage the CPS itself, despite the fact that it was developed over 257 years. Before the birth of Pushkin - the conductor of this language. But the language was formed not from scratch, but for thousands of years and at a certain period of its development was unified for wide use (because there are different dialects).

If we look at it more broadly, the problem of language is not only among the Russian people.

Recently, two tendencies have been outlined, about which one scientist wrote back in the 90s - this is the internationalization of society and the self-identification of people, a return to their roots. Contradictions are resolved in the following way: at the level of the individual, there is self-identification, a Person asks himself – who am I? There is an increased interest in the history of their people. And at the community level, internationalization is underway, but with the preservation and development of their language, although many languages have descended from Russian. After all, the death of the language means the death of the Genus.

But, according to the laws of system development, in the end all languages should merge again into a single language, where each of the preserved languages will be an organic subsystem of the Unified language of Mankind. **And this Language will again be new Russian.**

This can be confirmed by the examples given in the article. Russian language is taught to children by communicating with only one Russian child. This is no accident. Despite the great differences between different language groups, the brain retains the holographic principle of operation - imagery, at least at the level of internal communication between brain departments. When conducting experiments on the speech zone of the brain, it was found that no matter how people of different nationalities break their tongues; their brain pronounces words and communicates between their departments "in Russian".

Another example. Scientists from the University of Haifa (Israel) write: "Students who know Russian are more likely to achieve success in education than those who do not speak the language of Pushkin and Dostoevsky... Mastering the skills of reading and writing in Russian in the preschool period gives students significant advantages in mastering knowledge, says prof. Mila Schwartz. Research has shown that students who have knowledge of the grammar of the Russian language show higher results in their studies compared to their peers who speak only Hebrew or other languages.

The author of the article does not bypass a certain category of people, the so-called amateurs. Here we should also stop, because amateurs put themselves on par with enlightened "amateurs".

There is a General scientific definition that an amateur is someone who is engaged in science or art, etc. without special professional training or sufficient knowledge. TRUE: he is not an expert in someone else's field of knowledge. **But he is an expert, usually in his field, and he still knows how to think systematically.** We will talk about enlightened amateurs who created science and technology. The lack of psychological inertia in a new area allows the "dilettante" to approach the problem in a non-standard way, after which he eventually becomes a specialist and even a professional. However, there are amateurs who at all costs want to be great, to have a lot of money, or to be always in sight, to be among the mentioned in vain, and only to satisfy their base instincts. They are ready to do anything to solve their problems. **This is the most common and dangerous type of amateur.** It also applies, in particular to, "comrade ANYA" with its team". They stole someone else's development, not realizing that they stole it, so they will not succeed in the end. **One day their "Archer" will shoot at them.**

And more. We often hear that **with the change of CPS, energy production technologies must also change.** And for some reason, this puts many people in a state of fear – what will happen? Ask yourself and answer the questions: **will matter change and in what direction? Will the atom, electron, magnetic, gravitational, and electric fields that are a "kind" of electric disappear, or will they only change their energy characteristics? Analyze why 40,000 years ago our ancestors recorded Santias for us on platinum and gold plates?**

Here are the many questions and associations that FD Shkrudnev's article raised.

And in conclusion, I want to say in the words of the author: **the time has come for the Russian language!**

17.04.2014

I. Kondrakov

To be continued...
