

1.04. The role of SvetL programs in the transformation of a person into an initial state. Part 1

Author: Shkrudnev F.D.

Introduction

In order to move forward and satisfy your curiosity to know what the "**SvetL PROGRAMS**" are and, in particular (this is most interesting), how and on what principle, from a SCIENTIFIC POINT OF VIEW, the "**SvetL**" Complex "works", you probably need to first try to understand science itself, as such, which everyone refers to and relies on...

"The Communist party and the Soviet state show daily concern for the development of science..." (this was then). Today - the United Russia Party, the Government of the Russian Federation and the President of the Russian Federation - in person! - SHOW DAILY and CONSTANT CONCERN for SCIENCE and its development ... etc.

So, what is useful to choose from the following definition?

1. Purpose and goals of science

The purpose of science, which we are constantly presented with is the study of the properties of the phenomenal world, the formation of knowledge, conclusions of laws about the world around us with the purpose of successful operation of the society in terms of capitalism (once in the service, then there is wage) or the same in terms of socialism, but free (that is, just on the principle of theft). The structure of the social order differs only in its attitude to science - **whether it is paid adequately for the result or not**. The society is then provided with the results of scientific research in the form of atomic bombs, tanks, tights, synthetic food, etc. As a rule, along with the whip (the management system), a carrot (the society) is found. Science should not be open; otherwise its meaning is lost. Therefore, the goal of science is to create a whip for the exploiting class (or some mafia structure) to manage society, both at the level of social relations and using new technical means.

2. Means of achieving the goal

The means to achieve the goal should include:

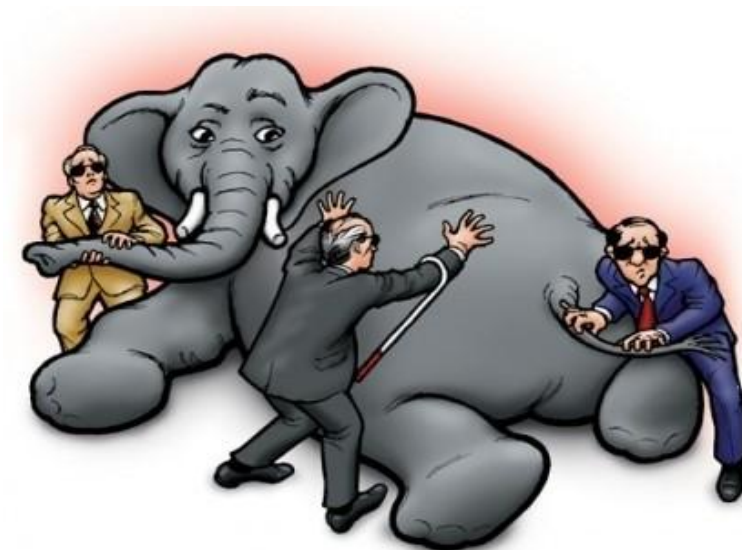

- a method of organizing research and monitoring research;
- method of implementation;
- technical means.

2.1. Method of research organization and control over research

It is generally accepted that scientific research is carried out only in conditions of providing opportunities for such research. However, this should be divided into two areas. First, the actual scientific development does not require the involvement of large technical resources - as a rule, it is work on displaying formulas, dependencies, explanations on paper or using a computer.

The second - is to attract large technical resources in the absence of a scientific base (we are not talking about checking the results with the involvement of technical means, and even more so, problems of implementation). For example, to check the charge density of a proton atom, a Synchrotron is built, since there is no theory on its structure.

Therefore, **only the first direction should be attributed to science.**

The division of science into fundamental and applied is not valid - there is only one science. And even more so to differentiate it into components (similar to dragging a mammoth into a cave - divide it into parts and study each part separately, the applied part is what you can eat, and the fundamental part - the skin - what to sleep on).

Let's consider the first direction separately.

a) Targeted research within a specially created structure (laboratory, Institute, Academy, etc.). Competitions, tests, family ties allow you to select the necessary composition, which later grows due to theft (based on the ability to survive in this structure) corresponding scientific titles.

b) "Insight" – a one-time delivery of the necessary materials at any critical moment or extreme need. These are rare individuals, and the scientific community is not responsible for the results of their work, but this "insight" allows us to bring the situation out of the crisis (for example, the method of separating the magnetic pulse, without knowledge of which it is impossible to test a new atomic bomb). This is the case when you can get "from dirt to princes". The case is rare, but it does take place.

C) Autonomous research. This is the most inconvenient case for science.

First, when conducting research independently, it is necessary to have a "rear", that is, finances, and the ability to conduct research on time, to be independent of any circumstances. The results can be stored for hundreds of years, to publish, to put them on display in the academic organizations, etc. Since Autonomous research is not controlled, they try to confiscate it, steal it, and so on. Then you can pass it to those scientific (or other) structures that should be engaged in such research, in terms of rank.

What does "control" mean?

None of the areas of scientific activity should be outside the goals set for science - the development of a control mechanism by society. Hence the slogan "he who does not work, does not eat" applies to scientific work. If it is possible to conduct Autonomous research, the fiscal authorities have hundreds of methods of confiscation. Control is necessary to ensure that all scientific research is subordinated to one goal, and none of the research would contain seditious directions.

So what is meant by the word "science"?

The answer to this question will be understood after explaining the meaning of the information fields. But first we can say: **"science is not only a way of broadcasting when reading the information field, but also the quality of broadcasting for the period of time that is necessary for the implementation of the information received."**

For such work, a person must have a brain, a system of connections with the appropriate information field, have the appropriate encyclopedic education (so that, at least, not to be confused in the names) and the ability to do this work.

2.2. Method of implementation

The methods of implementation should include only the method of implementing options "a, b" from 2.1. Option "C" is not subject to implementation, since it does not meet the goals of science: **"Ignorance is power."** So, the way to implement it is to form a system of managing society for the corresponding mafia clans and bring the charms of such management to society. When organizing the management system, the principle of an ice hole is used - "which floats up easier and smells worse". In this case, society, if its needs are not met, tends to get rid of the floating layer, but in its place always on a purely scientific basis, **a new one emerges, but with slightly different qualities**. If the management systems can be replaced (socialism, democracy, capitalism, etc.), then the mafia clans that are the customer of science cannot be replaced - the clan is either completely removed or modified to meet new goals and objectives.

There are no problems in forming the consciousness of society - it does not exist.

If the development program is formed, the corresponding mafia structure selects the appropriate management system for the program and presents it to the public, after indicating that the hole is cleaned. Unconscious elements of society are subject to the implementation of the developed program by means of their destruction, suppression, enslavement, etc. Science, which seeks (or rather translates from the information field) the foundations of the current development of society, cannot be part of the management system or be an integral part of the mafia clan. At the same time, science itself is not available to either the management system or the customer (mafia clan). That's why there is control.

As a rule, science management is conditionally selected, or rather assigned - with the full consent of the top of the scientific pyramid and the customer. The structure of science is a multi-layered pyramid, where each productive layer is framed by a control system.

Those who directly form the knowledge system are in danger of being banished from the pyramid if they fail to get a hold of any chair after the result is given. As a rule, the first design of a stable chair is the degree of doctor (Doctora) of Sciences. The academician's chair can already float in any ice hole, despite the abundance of academies (more than 180), research centers, institutes, and one pyramid. All the secrecy of research is hidden from society, not from the "building blocks" of the pyramid.

Each country has the right to have its own management system, but it does not have the right to develop according to another program, the goals and objectives of which are defined by the pyramid.

You can be a month or 50 years ahead in development, but you cannot go across or in the opposite direction from the single pyramid, which is transmitted from the information field, relative to which the pyramid was built. There are not and cannot be different pyramids in the same information space. At the same time, one scientific pyramid cannot work in different information spaces, since the goals in each space are different. In this case, we consider the information space with the conditional number 4 (communication frequency at 75.45004500 octave). The density of this information field, due to the imperfection of the life support system itself (which provides the information space itself), is constantly decreasing, which leads to inconsistency of actions and blurring of the goal. What, in fact, we observed today when "choosing" the President of the Russian Academy of Sciences. They could, of course, "drag" the Nobel laureate - but "SOMETHING STOPPED" THIS PROCESS, **and academician Fortov was ELECTED.**

The "artificially suffered" system of knowledge, but in reality "false-planted", will not help in the future in knowledge, i.e. it is simply not necessary. All current science can continue to be showered with ever-missing greenbacks, plan mind-boggling budgets for their "development", but all their activities are now likened to the materialization of the call from the "Covenant": "separation of the tares from the grains".

Only this separation is not happening now. Since this activity is likened to digging up a pile of garbage (from the old System), in which there were never any grains, only chaff. Our task is not to be "helpers", but to dispose of and get rid of all unnecessary things that can somehow interfere with development in moving forward to the truth and with the truth.

2.3. Technical means

The tools used by science (other than those that are genetically embedded in the life support system) are called technical tools. These are the means by which data obtained from the information field is transformed. This can also include the level of knowledge acquired when reaching the previous target program. However, due to the decrease in the density of the information space, it is not possible to use new technical means today, so we have to solve new problems with the help of repeatedly tested old technical means, which at the present stage are already an anachronism and cannot serve as a means to achieve the goal.

We can report that one of the SvetL programs, "inscribed" in the SU Program, contains material on converting nuclear reserves into raw mineral materials. To understand this correctly, cognition must be based on a framework that knows everything about the atom, its structure, morphology, albedo, and so on. It's simple enough, BUT!..

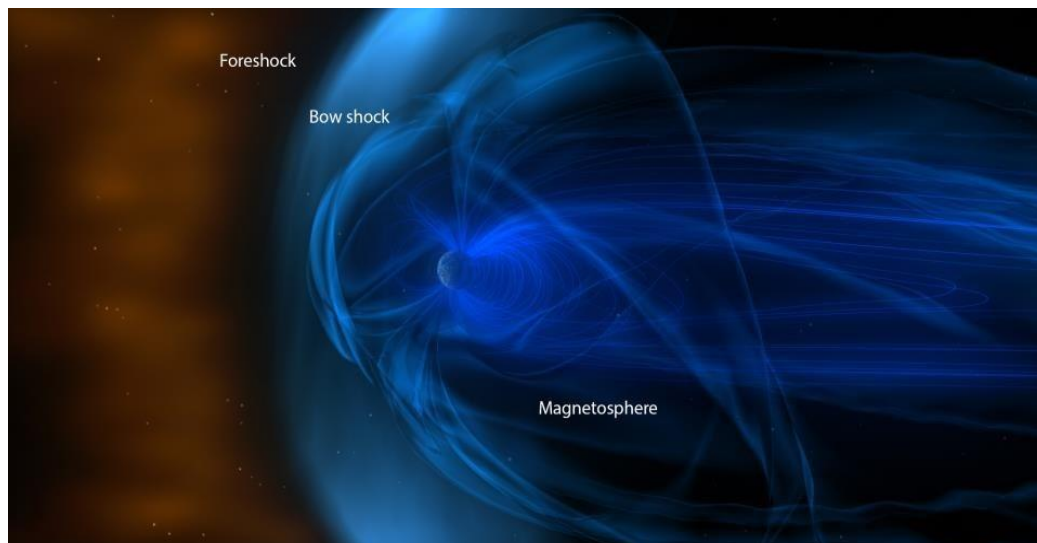

But modern science has a system of metric units based on horse constants, the Bohr atom model, and the periodic table. The attempt to rebuild the technical base is not informative, and this makes it difficult to understand the goals.

In science, revolutions are rare - only in connection with a radical change in the information base intended for the implementation of a new program. Without bringing a new technical base to science, it is impossible to ask for results from it, no matter how quickly they would be required. What's the catch? Why is the old database not suitable for solving new problems? After all, it is on this base that both nuclear weapons and spaceships were created. Let's briefly consider the basic concepts of the old information base, or the technical tools of the previous program.

2.3.1. System of physical constants

The most important is the power constant (joules, ergs, watts, etc.). But this constant is a translation from horsepower (1 HP = 746 watts - an American horse and 1 HP = 745.7 watts - an English horse). What color was the horse, what suit, how many teeth, how was it shod - science is silent. It is also known that the SUPER-SYSTEM indicates the clock time interval (24, 60, 60). However, the use of such an interval is allowed only in macro systems, for external links. And when calculating the proton atom, the time is different. Just as in the interaction in the exchange of "information" between the Brain and the "Light" Complex. It is also established that the clock on the roof and in the basement of the skyscraper show different times.

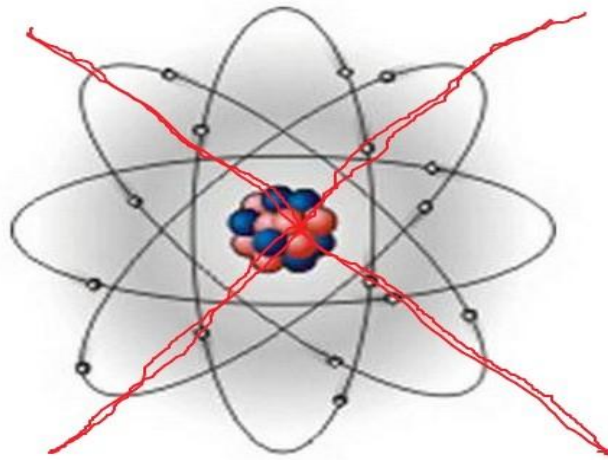

But that's not all. The clock magnetic pulse from the Sun comes at a very different time, as is customary with horse constants. The same can be said about metric units, the concept of inertial mass.

Science has no idea about non-inertial mass. And not inertial mass is the basis of the SvetL Complex.

2.3.2. Atom

The Bohr Atom Model (and with it, quantum electrodynamics and electromechanics) is today a misery of the times of Pithecanthropus, but yet, there is nothing to replace it, and still all calculations are made with electrons, protons (which collide) and quarks. Huge amounts of money are spent on searching for cosmic particles (i.e., ion formations).

2.3.3. The Periodic Table

The Mendeleev table closes the group of technical means - a table of macroionic structures without taking into account energy features and without the meaning of their existence. The table is based on the structure of the Boron atom, and if it is replaced with something, the technical base will collapse.

To avoid this, you need to update the concepts, clarify many parameters, and move to a new technical base.

If biological structures are not genetically prepared, then it is necessary to increase the density of the information space in order to start implementing the program with a new goal in a fairly short time. By the way, this is one of the tasks directly related to the imputed functions of the SvetL Complex.

3. Scientific base of other information spaces

Each life Support System forms its own information space for itself. The SvetL programs, in the variants of their application and use, **also form their OWN INFORMATION SPACES for themselves**. There are **18** such spaces on Earth, and all of them are designed to run their own programs. There are also 18 such spaces in the SvetL Complex.

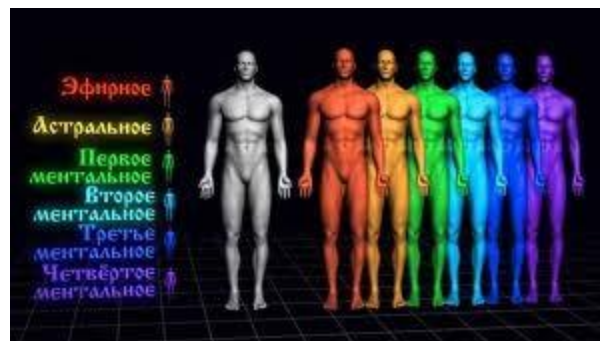

In terms of functionality, these spaces are comparable to the spaces on Earth, but they are only imputed to be created relative to The Brain of the Owner of the Complex and its physical body and all the Entity bodies developed by the Brain of this body at the time of TURNING on the COMPLEX (with the prospect of further development of the missing Entity bodies). Consider, for example, the scientific base of the information space on Earth.

This is a space built, as in the case of an Autonomous proton field, on the basis of a proton atom. But its density is insignificant and does not exceed the density of the information space. The octaves associated with this space are 71.625625, 73.625625, 77.625625, and 79.625625. The information contained in this space is of particular value, since it contains all the data on the structures of atoms and their energy characteristics. In addition, there is information about the current status of the program and its purpose. This is a space built, as in the case of an Autonomous proton field, on the basis of a proton atom. But its density is insignificant and does not exceed the density of the information space. The octaves associated with this space are 71.625625, 73.625625, 77.625625, and 79.625625. The information contained in this space is of particular value, since it contains all the data on the structures of atoms and their energy characteristics. In addition, there is information about the current status of the program and its purpose. The same thing happens with the Brain of a Person with respect to which (in conjunction) there is a Complex "Light". **That is, the information located in the Brain passes (in interaction) into a complex, since it contains all the data on the structures of Human cells at the atomic level and their energy characteristics with octaves of communication in this space. That is, the information located in the Brain passes (in interaction) into a complex, since it contains all the data on the structures of Human cells at the atomic level and their energy characteristics with octaves of communication in this particular space.**

Other spaces, such as space 11, contain information (like a verbatim report) about all changes that occur in the neutrino space. The first coupling frequency (octave 91.450450) is found, but the space density is extremely small. Information spaces do not intersect and cannot be seen without knowledge of their existence.

Information space 2 contains information about the location of mineral resources on Earth, ways to transform them for the purpose of creating non-inertial masses with the ability to move at 50 and 60 octaves of state. **And the information space of the Brain, in interaction with the Complex, contains all the information about the location of human mineral resources, regarding the saturation of cells with these resources, according to their entire needs, and contributing to the creation of non-inertial masses necessary for building up the next and already existing bodies of the Essence.**

If the Complex determines that the Brain of an individual using the "Light" Complex and its "Shirt" (the body and the bodies developed for this period by the Entity (read the brain) are not biologically and genetically prepared, then it is necessary to increase the density of the information space in order to start implementing the program with a new goal in a fairly short time. The goal is determined by the Complex regarding the **state of the brain as A WHOLE (at the PRESENT)** and interaction (communication and control) of the Brain and "shirt" at the cellular level in full. In this case, the purpose of the Complex, in interaction with the Brain, is to create (transform) a biostructure (Human) that fully meets the requirements of the current Program of the Earth's Native Control System, no more and no less.

4. Science, power, religion

No science can be created without an information space. No research can be initiated or even conceived without knowledge of the environment in which it should be developed. Therefore, specific knowledge falls on the environment where it was obtained. But this does not mean that the knowledge was as if in an information ball, subsequently deployed in space. Imagine a spider weaving a web. An analog of this is the creation of an information space. The goal of creating a web is to attract all Autonomous structures that cross the Cosmos, "suck" information from these structures and distribute this information through their own information space through media created in the image and likeness.

Thus, the implemented ideas of Jules Verne and other great science fiction writers are nothing more than concrete information transmitted to them, received from another "fly" that could not overcome the web that encircled the Earth.

The information space is built exactly like a web (Subsystem), the spider itself as a control structure is the System. But there are 18 such spiders on Earth, and each has its own information space. Further, to ensure the security of the web, systems are formed for the dependence of objects carrying stolen information (scientists) on various conditions in order to prevent the received information from entering other webs. **This is the formation of a corridor where the left wall is the system of power, and the right wall is religion. Everything that corresponds to the genotype of the formed information space and is supported based on the security of the System is driven into these limits. If one of the walls collapses, the System creates a new one; therefore, within the framework of the already created information space, it is impossible to destroy what is not subject to destruction.** Science should be controlled by the authorities (you can, of course, allow some academicians and even doctors of science who have their own chair to swim in the hole with the authorities) and have a backup option for writing off all failures. In this case, you can always refer to God, to whom you cannot even drive up on a chair. The boundaries of the corridor are determined by the density of the information field, which also includes the concepts of energy information density, holographic display, and reaction time and space. If the corridor parameters do not match the objects it is intended for, then no System can use the necessary information even for its own needs.

Given the presence of the musical Russian series, which is successfully used when "working" with spiders TODAY, and, in PARTICULAR, **is used as a basis in the "SvetL" Complex when it is directly "tuned to the user"**, it can be assumed that such a musical (8-register) series **can be used to radically change the properties of the web**, even in the conditions of existence in the information corridor itself. This is exactly what is happening today (during the transition period) **with respect to Users of the Complex**. This issue cannot be considered in more detail today, due to the existence of the corridor and those who are still active in carrying out all sorts of "saving" activities within the framework of the Golden million.

BUT! By "selecting contours" to form the NA tone, you cannot just superpose the information space, but also ensure that the spider simply escapes so as not to be eaten in the conditions of information hunger.

What is the brake on the development of science? - **Worldview!**

The point of view of science on the material (and non-material) world:

Solid → liquid → gas → unorganized plasma.

Atomic structures, of course, are searched for in a solid body, for which they create synchrotrons, and colliders.

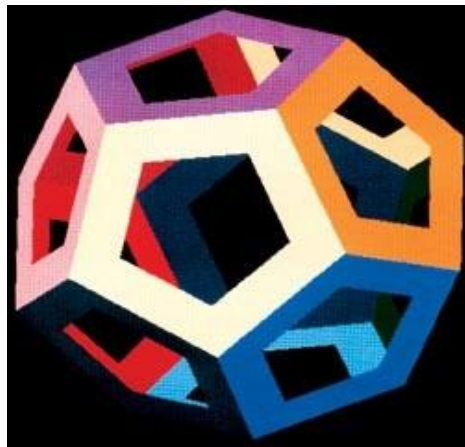

The same will happen if a **bomb is thrown into the orchestra pit during the performance of a symphony** and after the dust settles, **all the instruments and orchestra members are reassembled from the remaining grains of sand.**

It is this science that they propose to use in the XXI century!

Consider a different point of view, which was discussed by N. MOROZOV, N. LEVASHOV, A. KHATYBOV.

Strictly organized plasma → material structures (solid, liquid, gas).

Atomic structures must be considered only in the upper octaves of the plasma.

The Control system today has a k-structure, all lattices are built on cubes (in organic chemistry, a cube is converted into a hexagon). And the control System in the SvetL Complex is built in the Native Control structure - DODECAHEDRAL (the basis of the Design, control and interaction with the Brain is the dodecahedron). But at the present stage of TRANSFORMATION, the interaction and Transformation between the cube (Eber system) and the dodecahedron (native system) occurs through the torus structure. TOR today is the most "acceptable adapter" that allows you to carry out all transformative processes without destruction (conversion method) between the old and the new.

Octaves

128. Clock period. Set by the Sun, taken as the speed of light.

78 - 126. Control systems, storage of humanoids and "reels".

"SvetL" PROGRAMS are created and work (depending on the demand) from the 126th octave and below.

74 - 76. Control systems of all insects.

72. Brain of the "Golden million", genotype 461.

68 - 70. Brain of the "Golden billion", genotypes 441, 442.

66. The Brain of the rest of the World's population, genotypes 421, 422, 423.

64. The Upper octave of material structures.

62. Management of material structures during transmutation.

40 - 60. Energy corridor (**Tesla worked with the 60th octave**).

34 -38. Corridors of "0-transitions" after death.

30 - 32. Complex mixtures (such as oil).

24-28. Water.

16 - 22. Gas.

Modern science can work (and create technical devices) no higher than the 64th octave, all types of devices cannot be created above the 64th octave.

Anything higher than the 64th octave, **and the SvetL Program is higher, is a non-inertial mass, meaning there are no gravitational frequencies.**

The basic atomic structure is 128 octaves, and if we "pluck" it, we will reach the 64th octave.

Until 2012, the Control System consistently moved first to the 224th octave, then to 512th.

But even at a clock interval of 224 octaves, the speed of light will be billions of times greater. What will change in this case, see the section "How the earth's axis affects the Bank account" by A. KHATYBOV and "Heterogeneous universe" by N. LEVASHOV.

Science, like a straw, clings to the Big Bang theory, quarks, metallic hydrogen (it cannot be, because there is still a non-inertial mass of tritium), Darwin's theory (or an alternative - divine). All the "critics", skeptics, screamers and all sorts of "clairvoyants" who broadcast and evaluate the "SvetL" Complex, "relying" on what is basically impossible to rely on, continue to explain, teach (sometimes, turn off or turn on - if necessary) everyone and everything about their own knowledge and opinions about the "SvetL" Programs. Some even "know how to" "install, configure, and even clone" both Programs and the "SvetL" Complex itself, relying on the knowledge obtained from N. LEVASHOV (but, as practice shows, having scrolled through or, at best, viewed the pictures in his books). The conclusion is that the absence of a brain is not fundamentally significant in such Knowledge.

We see what we see - the cat also has an idea about the "SvetL" Complex, but no one is interested in its description of the Complex.

What does this phrase mean? That a person with vision examines and tries to cognize the "SvetL" Complex (and creates devices) on the basis of his own vision and cognition, i.e. regarding the instrumental base that he received. The material world is just a drop in an ocean of highly organized plasma. The entire technical control and measurement base of people is built on the basis of the material world (no higher than the 32nd octave), so it is not possible to measure anything higher than the 32nd octave. Outside of the 32nd octave, all the necessary measurements are made by the Control System itself and, oddly enough, by the "SvetL" Complex, because it was originally inscribed in the Control System (see Octaves).

Changing the meaning of what has been said, we can add that a person sees only what he is given to see, using tools called sense organs, the sensitivity of which are very limited.

It is known that "**Homo Tsapus**" is the king of nature, and, in addition, **he is also like a God**. But, the king of what nature and the likeness of what God - everything is still set out in fairy tales.

You can, of course, ask yourself whether there is life on Mars, how much water is on the Moon, how many years are we still to bask in the gentle Sun, etc.

The Mir spacecraft takes off to the applause of the Control Center and gently plops into the Pacific Ocean, and after this epoch-making event, 6 more rockets (over the past three years), but with strange "telecommunication satellites" (the penultimate one - already from a French strategic submarine) - explode and do not bring these planned "satellites" to their intended orbits... What are these - engines again?

Why isn't the Earth tumbling around in Space if its center of gravity is in the southern hemisphere? All knowledge about the moon is obtained, of course, from modern sources, primarily from Kozma prutkov - why the Moon in the daytime, if the day is so light.

Why 59% of the Moon's surface can be seen from the Earth was not found out even after the astronauts visited there (the film about the visit to the Moon was filmed on Earth).

Of course, many people already know more about Space than about the "**SvetL**" **Complex on Earth**, but again - **at the level of Przhivalsky's horse**. Both **N. LEVASHOV** and **A. KHATYBOV** have always emphasized that **the presence of the church is a direct proof of the absence of science. To understand this**, just answer a few questions, such as: How many Church miracles has science explained?

Start with the Holy fire at Easter.

An afterword for those who have chosen NEW KNOWLEDGE and a way to transform themselves and the world around them.

- Space exists without the Big Bang;
- Earth, planets are artificial structures that were created over 16 billion years ago;
- Man is the highest creation, created for tens of billions of years;
- The monkey is a humanoid human;
- The entire animal world, insects are created to control the frequencies that humans have;
- The radioisotope method cannot serve as a proof of antiquity;

"The moon, the Sun, and the moons of the planets are alien structures.

Ufology is not a science, but a collection of statistical material (and without meaning).

The Control system has removed some frequencies from the satellite communication tubes and you can forget about astrology as a way to get information.

On Earth, there are no problems controlling the condition of a person or any animal - medicine has developed a lot of treatments from pulling out extra teeth to removing hemorrhoids. For all known (more than a million) forms of diseases, medicines and drugs have been developed, the use of which causes a mass flight of any viruses. Therefore, there is no need to pay attention to how the hedgehog sneezes.

It is known that a person has "Chinese points" (Follya points) - these are points of control and influence on human organs by homeopathic action with needles (sledgehammers), current (no higher than 1000 Amperes). It is believed that if you stick needles (gold, silver, platinum) in the "Chinese points", then good individuals (spirits) will rush and settle in the right places, and the evil ones will escape.

Before the creation of genotype 46, there were no special problems with red blood cells and blood plasma. The main problem was to ensure the production of red blood cells themselves.

To do this, it was necessary to create a deficit of red blood cells by removing them. Leeches were used for this purpose. Russia exported 60 million leeches a year until 1917. In St. Petersburg alone, 8-12 thousand peasants worked in this field. Exports went to Europe.

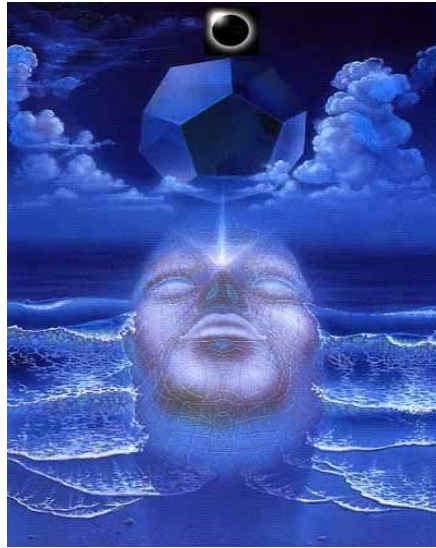

Today, erythrocytes in the plasma state are poison for leeches, therefore it is possible to recommend first treating with bedbugs, then with mosquitoes (they must be sterile and rolled up in a jar), and only after the elimination of plasma erythrocytes can leeches be allowed. But it is best to "turn on" the "SvetL" Complex. This is more reliable than all the needles, leeches, and bedbugs combined. But before we do this, we will try to understand some of the "nuances" of the "SvetL" Complex. To do this, instead of "horse literacy", we introduce other constants and concepts, and instead of the Bohr atom, we present the atomic structure DI-t-k (see the section "Atomic structures" by A. Khatybov and "Essence and Mind" by N. Levashov).

The entire structure is connected by a single grid (27 cubes, 54 nodes).

DI-structure - 8 dodecahedral-icosahedral (DI) blocks, each block has nested DI blocks (a total of 44 attachments in one DI block). The structure of the "SvetL" Complex is built using the properties of the golden section. The state of the structure - the Generator itself - is a highly organized plasma in the form of a quasi-living organism. There are no instruments on Earth that can detect it.

In practice, this is - and this is the first time we are talking about it today for those who know - the generator of the atomic structure. The work of the Generator is set today by the NEW (native) Earth Control System. All biological structures on Earth exist within the grid/lattice; the cell size and structure of this lattice are described **in the monograph "Cold Nuclear Fusion" by A. Khatybov and in the "Source of Life" 1-10 by N. Levashov**. Recall that the lattice itself consists of cubes, each edge of which is an energy module with a given frequency of charge movement. More than 5 thousand years ago, a certain system changed the relationship of connections and, by introducing the imported elements, created a new type of grid in which the whole world exists. The depth of this grid = 2200 m, height = 12400 m. This is the Noosphere, or habitat.

Under the conditions of Program changes made by the Earth Control System, which have been initiated, some properties of the base grid have changed.

Considering the process of forming the "Golden million", which is now stopped and terminated by the New (Native) by the Control System, it became necessary to adjust the grids to the new frequencies that were introduced under the program before Easter 2007, with respect to the formation of the "Golden million", the launch of new frequencies occurred. The discrepancy in the energy consumption of the exchange processes led to additional changes in the lattice structures. Therefore, the processes that are currently taking place cause inadequacy in the behavior of representatives of the "Golden million", "Golden billion" and especially the most active representatives of these classes, albeit with the now known consequences.

Assembly of Light – Form

The form of the "SvetL" Complex (in particular, its Generating part, i.e., the "Generator of the so-called dark matter») is an "assembly". The type of Assembly is determined by the frequency of the gravitational component, the charge equivalent, and since the assembly is located in two or more spaces at the same time, the magnetic pulse. The form of assembly of the Generator itself, initially "assembled manually" by N. Levashov, and later - "assembled and Generated by a Multifunctional Matrix" created for these purposes by N. Levashov. Levashov, described in detail in his works - "the Source of Life" 1-10, "Essence and Mind", as well as in the monograph "Cold Nuclear Fusion" by A. Khatybov.

For simplicity of explanation, **N. LEVASHOV used a variant of rainbow colors.** "The rainbow has 7 colors, SHOWING us 7 matters:" ...I take, for example, red, green, yellow and blue, "he said," and "put" them, in a certain sequence, the Generator itself, as a variant of the assembly of 4 forms." The resulting shape is determined by the number of connections of the internal structure.

The structure of the form is a dodecahedron, as the basis of the structure itself. But it is currently capable of interacting with the human Brain (Essence) through an intermediate structure in the form of a TORUS (this is only for the transition period). For greater clarity and, due to the inability to disclose all the information about the Generator (too many people want to learn, try and apply...), let's consider the possibility of building on the example of water.

The first major scientific discovery about the use of water was made not so long ago - in the movie "Volga - Volga" ("**Without water - and neither here, nor there**"). Some comments on this discovery are given by A. Khatybov in "Cold Nuclear Fusion, volume 8 and N. Levashov in "The Source of Life" 1-3.

WHAT YOU SHOULD PAY ATTENTION TO:

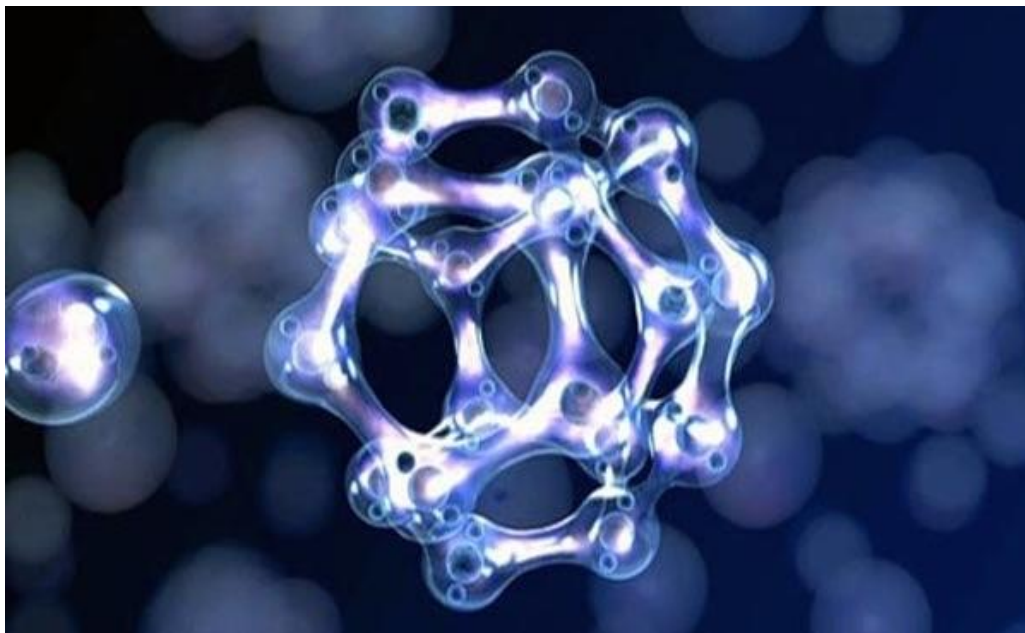

- water is not a simple mixture, but a complex structure;
- if water is used by a biostructure, **it has the necessary octave frequencies and energy characteristics that a living cell of the biostructure is built on;**
- changing the energy characteristics of water, removing the octave does not ensure the use of this water by biostructures;
- **changing the energy characteristics and removing octave frequencies transform the structure of the molecule into an ion of the corresponding metal (up to and including strontium) without changing the external characteristics;**
- the recovery process is the process of adding lost energy parameters to the water molecule and (or together with this) adding the corresponding lost octave frequencies;
- mineral compounds, which are themselves waste water, cannot be used to change the energy characteristics of water, and even more so, to make the necessary octave frequencies in water molecules (in humans, too, food goes along one path, or a path that has not yet been mastered);
- the use of mineral compounds to change the energy parameters of water requires research in connection with the possible change in the structures of a living cell for new characteristics;
- the most realistic scheme for changing the properties of biologically active water is the use of carbon C60, the molecule of which is synthesized. By the way, the C60 molecule is an assembly of 12 dodecahedra.

Water has $N256$ ($N = 8$) variants of 3-form assemblies. Each form is defined by the number of links. The names of the elements are taken from the periodic table, but only the names are hydrogen, oxygen, and nitrogen. The shape structure can be, for example, a tetrahedron (4 external links). It's very simple.

Now you need to MEASURE EVERYTHING!

But in neutron space, there are no instruments and instruments for measuring the current parameters of water, since they themselves contain structures of hydrogen ions, and the relative measurement parameters do not reflect the actual picture. The same thing happens if you want to quantify (measure) EVERYTHING is relative to the "**SvetL**" **Complex** and especially its "**Generator**".

Memory of Water

Water, as is known and confirmed by experiment, pours from above. This causes floods and snow drifts. Vapors immediately turn into clouds that walk across the sky, looking for landing sites.

Science, however, is not able to answer elementary "children's" questions:

- why does the river flow?
- why does the river flow from the mountains?
- why isn't the ocean fresh when so much water flows into it?
- why are the clouds at different heights (and the upper clouds do not drip)?
- and so on.

Since we consider water as an example, we will try to answer these questions from a non-scientific point of view.

The Earth's water basin is a complex structure. It was formed 360 million years ago. The water basin was formed about 22 million years ago. The basis of its formation was the transformation of neutrino structures. But neutrino structures have the ability to store information and after conversion retain this ability with a loss of reaction time. Therefore, water stores information about what happened before the appearance of the water basin. This information is also available in the cells of living creatures.

Water memory - at a gravitational frequency of 91.500000.

Now, **regarding the memory of the "Svetl" Complex**. The emphasis of the description of the installation process is that the binding of the Generator in the computer that has the "Management Program", practically carried out by the generator and, accordingly, the entire Complex through the SILICON CHIP COMPUTER. With respect to the memory of SILICON, **and, accordingly, the generator** (dodecahedral structure), it is known that hydrogen H4 has 512 atoms and 640 antiatoms, of which only 1 atom and 3 antiatoms form a tetrahedron-type compound, that is, a stable structure around which they are formed (in spirals having a helix angle according to the potential) into compact blocks (nodes). The further away from the tetrahedron the atom is (antiatom), the higher the octave of the gravitational frequency and the magnetic pulse that connects the entire structure of hydrogen along the outer contour. The octave of **the magnetic pulse determines the type of memory**, and the higher the octave, the lower the protection potential of the memory carrier. To change the memory of a high octave, there is no need to remove the potential of a magnetic pulse at a high octave - it is enough to change the gravitational frequency of the tetrahedron (neutron structure) and dodecahedron (main structure), and all other atoms and antiatoms will have to change the albedo, while the change will take place sequentially according to the law of the square octave of the spiral ring, relative to the torus, which is the connecting link. For example, if you change the octave of the gravitational frequency of the tetrahedron from 87.250250 to 79.875450, the potential of the magnetic pulse at the 248th octave will decrease by 856 times, which leads to its elimination and violation of the closed information storage system, which means that you can use this either for reading or writing with the subsequent operation of restoring the gravitational frequency. This is extremely important for the Brain activation process, regarding the reception of information from the outside.

It should be remembered that any biostructure has, as a rule, three main systems:

- potential acquisition system;
- potential conversion system for life support;
- systems for output of potentials that are not necessary for life support.

The latter system splits into two:

A. System for inferring low-potential structures. In addition, this system is the main output system for all ions that are products of brain activity.

B. System output for high-potential structures. Let's explain this as follows. Before the formation of the "slag", the cell had a magnetic coupling pulse of 77.450450. With the accumulation of slag, the potential of the gravitational frequency of the cell shape began to increase, and since the "slag" does not have its own frequency of communication with the brain, the magnetic pulse must provide a new cell (with "slag"), so there is a relative increase in the magnetic pulse. The limit value is 77.975875. With the subsequent increase in the "slag", the cell changes the right spiral (octave of the spiral 77.12501250) to the left. If such a cell is detected by the brain, it is removed from the body. If not, **a colony may be formed (called cancer by housewives), since all the potential structures of the "slag" are compatible with the products of the Brain itself. Here the "SvetL" Complex "solves the problem"** of preventing compatibility, since it directly interacts with the Brain and controls magnetic impulses. For the output of low-potential structures, a person has an intestine and skin. Delivery of low-potential structures (from each cell) is made by the lymph system and circulatory system.

Since the danger of damage to potential structures is obvious, all the attention of modern medicine is focused on the treatment of intestinal and skin diseases, **and all the attention of the Complex is on ensuring timely removal of toxins.**

P.S. It is recommended to read about the Conceptual base of octaves (for the particularly curious) in the article by A. M. Khatybov - "Principles of Management" and in the work of N. V. Levashov "Essence and Mind".

Further articles in this series will discuss and explain the actions **of the "SvetL" Complex generator** in specific areas of interaction with the human body and Essence, as well as other **programs of the Complex** related to the impact on physically dense matter and its transformation for the benefit of Recreating Humanity.
