Foundations of the formation of humanity

Part 1

ECONOMY OF HUMANITY

Part 1. Economy of Humanity
Center for Proactive Strategies
28.12.2009

ANNOTATION

The material presented does not claim to be complete, but it allows us to consider from a different point of view the issues related to the foundations of humanity's existence.

The concept of "Conceptual power" in the secular presentation is quite well known, but its awareness and perception have always been reduced to the formation of various "verticals of power" with corresponding structural or single personifications and historical "features" in the governing apex. They certainly tried to link all significant stages of history with the important role of a certain "human factor", necessarily elevating his historical merit as an individual, from whose action's various fundamental historical changes or events significant for society, always began. The analysis of early predictions (from Nostradamus), as well as the whole set of various Vestals (artifacts and their equals) extracted in archaeological excavations of various "antiquities" and the totality of current phenomena, actions and events are considered as a consistent "historical evolutionary" causal chain, under which any "scientific base" can be summed up, which has never been responsible for anything before.

The material is given in a brief summary, taking into account and within the framework of decryptions, the text and other information received by us, as explanatory and applied to carry out the necessary calculations for this hour and for the future. Since the calculations carried out extremely and necessarily contradicted the established postulates of modern science, the training proceeded consistently with an increase in the load in terms of volume and awareness. First of all, the instrumental base was given, which made it possible to realize the true principles of the construction of Space and Time. Modern science, including even all practical "shamans from constant pseudoscience" and their equals, does not have this instrumental base.

Conceptual power, information space, and forms and principles of the formation and existence of the Brain are one whole, and any power, if it considers itself such, must inevitably and necessarily ensure and accompany the execution of all Program functions prescribed from the outside by the society it controls. Otherwise, it will certainly be replaced, perhaps with the entire structure of society that it has rebuilt.

INTRODUCTION

Does Humanity have a Future?

You can believe it or not, that many people are increasingly beginning to think lately that the development of our Earthly civilization is taking place under a kind of “vigilant eye of the Universal Mind”. How do we relate to this? There is some truth to it. Is it worth diverting your attention in our difficult time to such “crazy” fabrications? Everyone will answer this question for himself, and it depends on the influence of a number of factors, the time of the impact, of which on the essence of everything that is happening, has come.

The managed processes of the old Program have been terminated. All Complexes and Systems in the previous program format have ceased to function. The vector of Goals to support the execution of phenomena, actions and events is “forcibly” prematurely completed and “programmatically eliminated”. There has come a very brief, but very eventful, period of preparation and transition to the active state of the process of executing a new program, especially in that part of it where the future of Humanity is directly and indirectly involved in phenomena, actions and events of a completely different format. Software installations for control Complexes and Earth Systems for external support, both from the Supersystem and the System for the specified execution process itself, have already been completed.

The judgments presented to our attention exclude any purpose of revision, criticism, or evaluation of previous philosophical theoretical works and studies on questions related to the foundations of building Society within the old Program. All this is not ours and is no longer for us. But, to demonstrate the level of significance of [the Ideology of the Essence of Conceptual Power](#) itself and its constructive role in the construction of “their Society”, is relevant, even extremely necessary at this transitional moment of completion in the formation of Vectors of Future Goals.

[If a person cannot foresee or find connections between the facts of the changing reality surrounding him, then the events taking place around him, by themselves, do not have a logical and feedback connection with him.](#) Such a person (or their group, the scale does not play a role) is only an occasional passive contemplator and a secondary application to what is happening for a very short period of his use as an object or tool and no more. This is what happened in the processes of the old program. This condition causes a non-essential passive and parasitic function, more often on the verge of a flawed sentence – to be applied.

Our role and function is quite different – to be at the level, able and capable of actively directing part or all of what is happening as it relates to us. We must and can take an active part in the process of recreating ourselves anew in order to become Humans, deeply aware of the true function of Humanity on Earth and finding our true role and place in the program processes of planet Earth.

To be a passive instrument and biological material of the planetary experiment of foreign directors from the outside, who chose for us the path of extreme egoism, which only allowed us to destroy each other and see the basis of society's life only in material production, is [no longer for us](#). We leave all this with full awareness for the unfortunate past, which will no longer have any investigative links with the future. And, only historians will be interested in the past.

[If a person is only able to take, and not to create and make amends or eliminate the consequences of his actions – he cannot be defined as a Human. It's not even a persona, but a controlled biological being. It can have only limited motor functions of the brain for household arrangement and its temporary life support due to the destruction of the harmony of its environment and its additional use, outside of its will and desire, as a biological object according to the plans and programs of external control by alien Complexes and Systems. They must be called – People.](#)

A Human was driven into such a state during the execution of the processes of the old program. This can be demonstrated more clearly and expediently in the sphere of judgments about Political Economy, as part of the Ideology of Conceptual Power within the framework of the old Programs.

The name of the science called “political economy” came from the Greek words: “politeia” and “oikonomia”. The word “politeia” meant “social structure”. The word “oikonomia”, in turn, consists of two words: “oikos” – house, household and “nomos” – law. In the general collective plan, this was understood as laws or rules on the social structure of the economy (household), hereinafter the economy. But it was in the sphere of the social structure of the household (economy), as the main field of artificially organized battles conducted at all historical stages, that the formation of factors took place, as the basic basis influencing the structure of society as a whole. It is for this reason that we consider the issues of Political Economy in the first place.

In the foundations of the formation of Humanity in the new Program, such definitions as the [social structure](#), and, consequently, [political](#) (meaning economy), are no longer acceptable at all. All the basic definitions and further judgments based on them in the past were completely isolated from the main subject - Man, turned him into a tool, into something that could only be used for someone's purposes, i.e., for something and for anyone, but not for the Man himself. Moreover, when trying to apply someone else's language (other than Russian) to the name of economy of Mankind, "traditionally", it will be noticed that the word "Humanity" in these languages acquires for us an incorrect or absurd meaning. The Greek language could be the only one more approximate for this, but the concept of "human sphere" will sound like "anthroponos" according to it.

In this regard, it will be smarter to use your native colorful Russian language, more capacious in depth of information, without infringing on your dignity, and this direction can be defined as [Saving Humanity](#).

[Humanity itself is nothing but a single structure of Human social organization. As a social organization, Mankind is a single function designed for a model harmonious unification, provision and support for the manifestation and full fulfillment of the functions of its purpose](#)

for each Person. Mankind is a Subsystem, but it is not a secondary mechanism for application of a human in the general structure of the hierarchy of software processes of the Earth model. This is a social structure into which every Human Being voluntarily strives with all his mental and spiritual beginnings. This aspiration is not for reasons of the necessity for survival, but for reasons of their own conscious professional usefulness, i.e., the desire to give everything possible of themselves and for everyone, feeling their primary origin in a social organization. Then all his universal participation, including labor, will be embodied by him with Mindfulness, i.e., with full aspiration to conscientiousness with a true awareness of his personal function as a Man and as an important element in the universal harmony of life on Earth. This is on the one hand.

Humanity (Человечество), on the other hand, is a special program state of the Model Earth. The fact is that the Earth possessed such a state before the invasion of the interventionists. Now this condition will be restored during the transition period under the new Programs.

"Чело---Вече---Ство" - the definition and level of such a state, which proceeded from the following true awareness of the unique essence of the trinity of the obligatory hierarchy of complex self-controlled existence of energies "Supersystem---System--- Subsystem":

- "Ство" is a process of constantly "making or creating" from the outside by control objects with higher octave energies than the Earth (the Earth's limit octave is 512) and the Universal Mind as a Supersystem;

- " Вече", is a conciliar Brain, i.e., a concentrated harmony of all the managerial abilities of the Brain of the Earth, as a complex multi-combined model function, ordered by its structural expediency with all controlling target energy-informational connections and energy flows in all octaves of the supersystem without hegemony and antagonism. " Вече " is a developing System in harmony with the Cosmos;

- "Чело" is the body of the Earth, i.e., the Earth model itself, with all its complex saturation, but on a smaller scale than the Cosmos and the same mandatory hierarchy - "Supersystem-System-Subsystem". "Чело" is a subsystem in the model with respect to external connections.

It was permitted to inform, that Humanity is a special state of the developing energy-informational model of the Earth in harmony with the functions predetermined for it from the outside, emanating from higher-order control objects.

It is not Humanity (as a social association) that received such a name because of and from Man, but Man has found this high vocation because He is an important fragment of Humanity as a state of the overall model, possessing extensive creative functions of a high level and order. At a lower level of the model, Man is a Subsystem in the Earth Model. Being a Subsystem, Man forms a socially organized structure to ensure harmony between the mandatory functions prescribed to him and the necessary conditions for their implementation and the necessary support for this.

Could there have been a state of "Humanity" during the violent intervention of the Earth? Of course not, and by no means. The temporary state for the entire period of the Ebrov intervention was defined as " [Цион/Sion](#)", i.e., more familiar as Zion.

[Цион/Zion – destruction](#). Therefore, the state of a completely destroyed harmony of the Earth model through the antagonistic introduction of aggression from the outside by someone else's temporary targeted interventional processes, destroying everything that previously existed, is Zion. This state has finally been stopped, the process of eliminating the consequences of this and restoring the previous states has begun.

Returning to the old notions of "society," and equally to this, to drive Man into the framework of "a society of biological beings, as a kind of tool without a brain or functions for the sake of preying upon itself and, for the most part, unknown to others by old rules and patterns", is no longer acceptable to us.

In the framework of preparation and execution of the new Program, any further attempts by any "figures" to view Man and Mankind as a new Subsystem, through some stencil stages of its "independent and separate development, based on the experience of previous history", which are out of harmony with changes of the native System and Supersystem, will be absurd and punishable by the System. And to the lovers of reasoning in the key of the old scientific cognition, the road is paved - to seek with a sense of nostalgia their origin through the opinion of Darwin, if they themselves are preserved in the former guise, at least in the brain, at the level of the current one.

Before judging the formation of Humanity, it will certainly be necessary to specifically determine the Man himself, his purpose and his functions.

To do this, it is necessary to get out of the state of lies previously provided to us from the outside (within the framework of the old program) and get closer to the truth, including the current one, which is already several steps closer to the truth to the Human condition and its functions. In order to understand and realize the ongoing processes of the current moment and for the future, it is time to have other objective ideas about the real material world, to get out of the scenario of illusions previously given to us, beyond our desire and our spiritual and other motives.

It is enough to touch upon the true chrono-process that has taken place on Earth over the last 18,000 years, which were carefully concealed by the Complexes and Systems of the old program under the watchful and extremely strict control of everything that had taken place before, including cognition, both in theory and in practice.

The current circumstances, for some reasons categorically unrelated to futurologists and their work, allow us to get out of this lie. Within the framework of judgments about Man and Humanity of the near future, we will touch only on the extremely limited phenomena of the truth of the chrono-process and only concerning Human changes and external interventions related to the conditions of his existence on Earth.

All modern knowledge, presented in the usual reference books, encyclopedias, scientific and educational literature on fundamental and applied sciences, is built on the basis of information provided from the outside by the intervention Complexes and Systems. Today, this

knowledge is a real obscurantism, including the entire basic science as a tool of cognition. No Academy in the World with its specialists, tools of knowledge and accumulated "scientific" experience, is able to decipher any true processes occurring in the Solar System due to the lack of control systems, analysis and forecasting calculations based on the [true basis](#) on which the System of Planets was created and now exists.

An "artificially developed" system of knowledge, and in reality, a "pseudo-substituted" one, will not help cognition in the future, i.e., it is simply unnecessary. All current science can continue to be showered with ever-missing green bills, plan mind-blowing budgets for their "development", but all their activities are now likened to the materialization of the call from the "Covenant": "separation of the chaff from the grain." Only this separation is not happening now. Since this activity is likened to digging up a pile of garbage planted by them (the old System), in which there have never been true grains, nor any chaff. Our task is not to be "helpers", but to dispose of and get rid of all unnecessary things that can somehow interfere with development in moving forward to the truth and with the truth.

The entire System of native Planets was created and now exists on the [dodecahedral structure of energy grids, as the fundamental basis for the formation of spaces](#).

It is quite enough, without interference by the established opinions of futurologists and science fiction writers, to declaratively accept the fact, as the basis for understanding everything that is happening, that more than [18,000 years ago the planet Earth was interned by a certain "Ebrov System"](#). It is true, this information was received from the Earth's Management System.

One of the most important interned investigative changes on Earth was the change of the basic foundation of the formation of spaces from the dodecahedral to the cubic foundation, in the construction of energy lattices. The introduced cubic energy grid, which framed all the previous states and energy structures, changed and limited the state of the material world on Earth to a level acceptable only to alien control systems and changed all environmental conditions, including the atmosphere, water, and the entire biosphere, etc.

Earth's brain before the attack was 512 octaves. The attacking intervening planets had a brain of 224 octaves. Subsequently, for a number of reasons of incompatibility in the new conditions of Earth, this intervening brain of 66 octaves was destroyed. The remaining structures of the Earth managed to preserve, for a short time, the brain of 57 octaves (mainly in the equatorial band), with a further decrease in its level, the population decreased by 67-68% and only about 2 million people remained, with their subsequent death. The Easter Complex, as one of the main native escort complexes, (located under Easter Island at $h = -12,450$ m) was completely turned off. After carrying out a number of program processes on the part of the interventionists, a person was turned into a kind of biological being that did not have the same independence in the brain. Over the past time, especially the last 4,000 years, the Interventionist Supersystem has carried out a huge number of software processes through a modified System of surrounding structures. Including with all Life Support Systems, Bio-centers of the planet Earth, creating and supporting a person and directly with the Person himself.

The purpose of all software processes carried out on Man and with his participation, was the following. In the execution of the old programs, it was envisaged to apply the unique perfection and capabilities of the human body (the so-called shirt) in relation to the changed environmental conditions, i.e., to carry out the process of learning all the secrets of a living cell. To adapt the Life support systems and Bio-centers of the planet Earth to the capabilities of their (interventionists) Control Systems and to form missing or matching systems in addition.

According to their program, it was planned to raise the level of the previously destroyed human brain to octaves of harmonious combination with the brain of the interventionists (spiders). Further, to introduce the interventionists' brains into the "human shirt", to create and preserve individuals of such a brain genotype in the amount of the "Golden million", to subordinate to them performers with a brain genotype of 44 octaves (from the composition of the Golden Billion in the amount of 500-600 million). The rest of the people were supposed to be destroyed in 2012, as waste material that interferes with their heavenly stay and development in the process of "forced" captive movement in the direction of the constellation Ursa Major (to the planet Sur, as their native Ebrov base).

The entire true course of the execution of the program processes was covered with a veil of legends, drawing tragicomic scenarios, as it were, of the evolution of the development of society and a person who "found his way" in the knowledge of the world around him, actually being in complete captivity to these illusions. Full true information about past phenomena, actions and events is available, but within the framework of these judgments we will limit ourselves to the specified material.

There are no mistakes in Human history (the last 18,000 years), there are mistakes only among historians who seek them out from each other due to not knowing the essence of chronological events that occurred on Earth and their true causes.

At one time, materials were provided in the established format for the corresponding current time and at the appropriate level, on the basis of which the development of special mathematics, the theory of symmetries was demonstrated for a given (i.e., the currently existing) environment, fundamentally new functions (Phyto-functions) of an existing living cell were derived, ratios for the golden section were obtained, and much more. This made it possible to accurately calculate the transients occurring in the atom (without the help of psychics, "gray mice", office plankton, all their supporters or artifact seekers) and much more. All materials and research tools are now strategically important for Russia, have limited access and are no longer subject to open publication and replication, especially in the conditions of "open market relations" and all their uncontrolled and negative consequences when switching to the terms of the new Program.

Within the framework of the topic under discussion, the events and phenomena of the last century are of the greatest interest to us, as indicative.

Taking into account the veil of the legend about the "development of society", the Political Economy of the last century has established itself in the fact that "The basis of the life of society is material production. In order to live, people must produce material goods. People produce material goods, i.e., they fight against nature, not alone, but together, in groups and

societies. Consequently, production is always and under all conditions a social production, and labor is the activity of a social person".

A person suddenly, solemnly becomes a public person and can no longer belong to himself (there is not enough brain), and his work is entirely aimed at a courageous struggle with the nature he hates! That was the basis of society's life. But, enough of the madness!

Reason, as one of the functions of the Brain, can only be determined by the degree and depth of awareness of its functional purpose as a Human Being on Earth. Therefore, a public person simply could not have a "technical" mind, and all stages of the development of civilization, as fragments of software processes, especially of the last century, were insane. That is why they were so bloody, unrestrainedly antagonistic towards each other and inhumane in their goals, regardless of the degree of historical importance that their leading executors tried to give them. It is an immeasurable pity that ordinary people, i.e., the so-called masses of the people, suffered the most from this.

Knowledge of the World, together with its instrument, science, is just a process of checking the level and degree of development of the brain. If he, according to his level of development, was worthy of anything, he was given according to his level. This was considered knowledge, not a scientific discovery. Knowledge should not be confused with the Mind, because the very notion and definition of Mind is extremely necessary to move from the sphere of kitchen and household assessments to the sphere of awareness of one's destiny.

The participants (contemporaries) of the last historical century perfectly remember the winged and inspiring slogan of Leninism (CPSU): "Communism is Soviet power plus electrification of the whole country" (V.I. Lenin). Where did this madness come from?

For some reason, society did not think about this phrase, which briefly and clearly expressed the essence of the centennial program, but suddenly it was inspired to varying degrees and rushed to implement, regardless of all the horror and the volume of people's losses. There were several programs. The largest one was 500 years old, according to which the conditions for the formation of such a human genotype was to be created that would be under the full influence of the Control System. At one of the stages of this program, in 1845, the creation of a radiation web (the most complex design of energy grids in the layer "-4,400 m to +12,400 m") covering the Earth was completed. After that, only those who could be controlled using the properties of the web and such a "Development Program" that would no longer allow a return to other ways of Brain development, would remain on Earth. People (and animals) connected to such a web were conventionally called "electronics" (according to the old Program).

So, their first goal was that only electronics should be left on Earth, the rest should be destroyed. Any means sufficed to achieve this goal - wars, genocide in any form and scale, epidemics, etc. And all this was accompanied and provided by Complexes and Systems. Of the last vivid manifestations of this, Yeltsin was particularly successful - he took it in a high-tech way (from the point of view of a professional politician or dictator) and imperceptibly for the population itself and significantly reduced it. Electronics can be given any command using the web, direct their actions to perform any task (within the framework of the Program set for it).

The Soviet government (together with electrification), or rather the pyramid of power built under its basis, were to provide correction and carry out the program presented to it (set by Control Complexes).

Note that both public consciousness and science began to execute the program simultaneously - there was a wandering specter for politicians and revolutionaries in Europe, and scientists rushed to study radiation. The Control system selectively provided all that was needed for just the electronics, removing from the rest (step by step) the Brain and narrowing their range of sensitivity (awareness and susceptibility) to the changes taking place. Those who happened to be left behind after the purges had to pass away "naturally" (according to the level of knowledge of pathologists and the teachings of Darwin). Thus, the whole "heroic tragic history" on the scenes of all continents, often covered with a bloody veil, the procedure of active "development of civilization", which has experienced all forms of society (except primitive communal, but not everywhere), has passed in several stages. The program also had a completion date - 2000. By this point, the electronics should have received a new Brain, and the rest - all kinds of diseases with a further and accelerated finale through an obituary.

The intermediate formation of brain genotypes, i.e., personalities on which the System practiced and tested the results of the processes carried out, were also subject to destruction - these were mutants from electronics, having irreversible distortions of the brain matrix, incorrectly understanding commands and incorrectly responding to control requests of the Management System.

We note here that until this final date, all the work was carried out in conditions of "counteraction and possible harm" from non-electronics, because knowledge from the Control System was given more often in a distorted form and did not give an idea of "reality" to unnecessary individuals. This explains the periodic "bursts of activity" in the political sphere, scientific, industrial or military. Local or global confrontations in the actions of various "strategies" (geopolitics, domestic politics, manifestations of extremism in any form, etc.) were the resulting crown of this. Attempts to find out the truth, i.e., to take the initiative in obtaining information, were very harshly suppressed at the root, by the System.

There were also failures in the Control System - Stalin, who was not an electronic, got into the Marx-Engels-Lenin group, and therefore misinterpreted the work program. Instead of making "electrification", he went into regions where the density of the control web was not yet sufficient, for which he paid.

There were also failures in the Control System - Stalin, who was not an electronic, got into the Marx-Engels-Lenin group, and therefore misinterpreted the work program. Instead of making "electrification", he went into regions where the density of the control web was not yet sufficient, for which he paid. Further, Gorbachev managed to correct Stalin's mistakes (to remove zones of weak control) and ensure that Yeltsin carried out the program processes "entrusted to him", i.e., imperceptibly remove the unnecessary population without its resistance and difficulties (being carried away by voucher and taking away as much "independence" as they could, by separation and isolation from their former common).

However, the development of the program must necessarily and always be accompanied by new "knowledge" that only electronics should possess, while all mutants or so-called *gutta-percha individuals should be isolated from such a possibility. One of the unfortunate features of gutta-percha individuals was the presence of the brain frequency octave 39.5, through which fragments of misinformation were manifested for the Control System and, moreover, distortions in the stability of the functioning of "communication and means of control" of the System itself. For this manifested fact and feature, they were "specifically marked", more often encouraged by HIV infection or other troubles.

The "scientific base" for electronics was prepared and was waiting in the wings, while it should not be forgotten that the main slogan in science was "no knowledge is power", which is common to all, and we should pay tribute to one of the leading conductors of such "science" - V.I. Vernadsky.

The value of Vernadsky's work lies in the fact that he managed to combine all the obscurantism introduced, not for electronics, with information partially taken from the program and lead it so far away that if the information from the program accidentally turned out to be unaddressed, it would be impossible to go back. There were no such geniuses on Earth who could have so masterfully led science into the wilderness at the crucial stage of the program's work. If Marx-Engels-Lenin were only the executors of the program, then without Vernadsky there might have been problems with execution. Vernadsky's ingenious work had to be maintained until completion of the old program, and no one was to know the goals, means, or capabilities of the Control System. Spending energy on achieving goals that did not exist, scattering attempts to find out the true state of affairs, increasing the number of "gray mice" among scientists - all this Vernadsky managed, and more so, managed to instill it in the entire scientific world.

And it was not for nothing that Lenin pointed out the great importance of science, precisely the science that was entrusted to Vernadsky. Unlike Lenin, he did not prepare the mass murder of people, genocide, nor, the destruction of the established foundations for the survival of a dying people, to the contrary, he very competently solved the main task assigned to him - to destroy science.

Humanity will be "grateful" to Vernadsky, as a genius of all times and peoples, for the "creative approach" in solving the main task - to ensure the safety of program execution through ignorance.

The program processes of the twentieth century, excessively heavy in scale and intensity, extremely bloody in their inhuman target essence, completed the path of several millennia, and the resulting chronoprocess had a global Goal Vector in time - the cultivation and improvement of a specific human brain genotype, in the quantities planned by the program for the required point in time, in order to interface with the interventionists' brains.

**My Note: Gutta-percha – A Russian novel (folk tale), which later was made into a movie, about an 8-year-old orphan. It is also the name of a tree. A latex derived from the tree is described as: rigid, naturally biologically inert, resilient, electrically nonconductive, thermoplastic latex. It is a polymer that forms a "rubber-like" elastomer.*

The planetary biological program carried out by interventionist Complexes and Systems over Humanity, in alien (not native) conditions of the changed environment of planet Earth, has been forcibly completed. Within the framework of the old Program, the development of civilization was not a primary and defining aspect, it was not only secondary, but performed the function of only providing, accompanying and fulfilling the role of legends to isolate and exclude a person from the possible fact of awareness of the [Essence and Truth](#) in the ongoing processes.

To our great and sincere chagrin, there was no such purposeful and defining historical path of the development of civilization in all directions, spheres and at all "historical" stages, as it was presented and suggested. A strictly verified external intervention program for the development of very specific brain genotypes, in 12 stages, was carried out (this was presented as 12 generic tribes) for over 18,000 years.

[This is what humiliation was in store for Mankind, and for a long time it was embodied beyond its wishes. It could only lead to tragedy, that is, if it could not have been prevented, the Earth itself would have been liquidated.](#)

But, Man (and now, so far, people) managed to survive. It means that He managed to organize something in the process of His survival, i.e., there is something in His organization that must and can be taken into account and applied in execution of the Goal Vector of future phenomena, actions and events under the new Program? Moreover, something and someone helped people in such anti-human conditions to preserve a particle of their true humanity?

The process of recreating a Human has already begun, it is not instantaneous and, basically, cannot be initiated by a Human, however, "individual opinions" will be taken into account, but very limited.

A recreated Human with a restored brain of high octaves will be able to approach the performance of his true functions in a completely different way (finally with the Mind), the fulfillment of his purpose will be accompanied by changed environmental conditions in the complex, changed software processes of the true restored (native) Complexes and Control Systems. If someone sees the above as a "product of futurology", then this is only an assessment of the level of development of his brain and nothing more. It should not be assumed that this process is counted in decades, it is already taking place, and the time period is extremely short.

All issues related to the formation of a part of the Goal Vector of future phenomena, actions and events connected to the construction of the future of Humanity, are not extraneous to a Person, and "cheat sheets" from his past experience of building a "society" are far from acceptable in this case.

This should be a special subject of discussion in the current period.

In this discussion, specialists and leaders of the leading level, if they see themselves in the future and it is not indifferent to them, should take an active part. This is the essence of building something new, in this will be the "national" and state idea of Russia (ideology, state-building, etc.), in this is the solution of all the centuries of accumulated problems of Russia.

[We will have to build Humanity and do this with a recreated Man!](#)

The "construction site" is ready to work, the construction "materials" are ready to form. The Essence of the Ideology of Conceptual Power has been manifested, the Essence has acquired a state of readiness for the implementation of New Program processes.

CHAPTER 1. Conceptual power of the old Program.

The component of the power structure is represented by the following unchangeable and obligatory hierarchy: **Conceptual** power, **Structural** (state) power, **Structureless** (public) power.

Structural and Structureless authorities in all past historical periods were presented in various forms without changing their main nature and essence, but had some specific features and manifestations due to the imposition of various religious and occult judgments, as well as the level of development of civilization at all its stages. Their embodiment from the beginning of the 18th century had some additional features. The emergence of clan structures and secret orders (organizations) of various scales, which influenced the degree and effectiveness of the power management of society, has made and is making influential adjustments to the construction of the very model of Structural and Structureless power at the last historical stages.

The leading and declaratively determining level has always been and remains **Conceptual Power**. It is the dictating and predetermining beginning for the subsequent levels in the whole hierarchy of power in general.

Within the current program-historical moment and in the new Program for the future, It is of primary and most subtle interest for a number of reasons, judgment for which one tries to publicly circumvent or relegate it to a level with limited involvement, if they do have a stake in it. Curiosity in this case, as well as anyone's initiative interest in career and other goals through conditional or feigned involvement, has always had serious consequences for the initiators.

In the present circumstances of the beginning of the transition period to the New Program, **the System has allowed us to debunk, to a permissible degree of truth**, the halo of speculative mysteries and myths about the Conceptual Power, diligently and at length created earlier by all the numerous and many-faced representatives from sacral levels, secret orders and clans of historical and modern origin.

Thanks to their fruitful activity, they managed to create such a myth not only about their direct, alleged, participation in the "formation of the basic foundations of the future," executive public and hidden instruments of the system of functioning of Conceptual power, but also to convince everyone around them of this. But is this really the case?

The true basis of its extraordinary influential and predetermining power over other levels of power has at all times been explained in an extremely cautious and limited way. More often, any attempts at secular publicity in any form of manifestation, the penetration of "random" personalities into the "circle of some chosen ones" or initiative actions for any influence at the level of Conceptual power, were certainly and strictly suppressed. They managed not only with the framework and level of rigid explanations of a complete or limited ban by anyone on any judgments on this issue, but also wonderful manifestations that could not be explained by anyone, as a rule, with a tragic end for the initiators.

It is quite natural that around this process there have always been many cheaters, "historical" clowns and carriers of some "false-truth".

At some historical moments the Conceptual power envisaged this as a scenario initiating some future phenomena or as a part of diversionary or other legend. The active participants of such scenarios later became positive or negative "heroes". In reality, the processes envisaged that such dummy figures were to be used as a bargaining chip in calculating the results of completed events (for example, the birth and development of fascism in Europe, the outbreak of World War II and its extremely tragic end for many peoples of the world).

Within the framework of the ongoing processes of long-term execution and their appropriate management at the level of Conceptual authority, sometimes limited autonomy of the executors was allowed, i.e., without constant accompaniment of the System. In these cases, the executors were allowed to unite around themselves, calling this gathering circles, orders, parties, gatherings, historical or literary almanacs, etc., and to make "historical shows" of different scales. Such "billets", in the future, could be applied when they were needed. If there was no constant need for them, and no harm in doing so, such "billets" were preserved for some long period of time in history. So, for example, there is absolutely no imperious and other need for the now preserved kingdoms and their equal multiplicative structures of decorative power or most of the secret historical orders preserved since ancient times, etc. But they are still kept in working condition and imitate their power function, demonstrating its manifestation at various levels. In the new Program, the need for such decorations completely disappears, and performances with great acting skills can be performed in any academic theater for significantly less costs.

However, all these are not those direct processes of ruling on the level of Conceptual Power, rather processes of just background saturation for giving national-geographical, confessional or sacral coloring, more often playing a role of scenery and no more. Sometimes, when performing actions, it was possible to bring the state of the event even to the level of temporary seizure of some power, predominance in something or, allegedly, "changing the course" of history and even the formation of a certain "ideology of the development of society" (Marxist-Leninist theory, etc.).

Such historical "entertainments of the System at the level of Conceptual Power", basically, played more often the role of a "musical pause" to wait or hold part of the events until the next phase or the cycle of actions, the time for which has not yet come. Sometimes history (the System) either did not notice this or made corresponding corrections within the limits of acceptable deviations from the Target Vector of future actions and events, saturating the events, "heroic" and highly emotional actions (states), giving them extreme "historical" importance, sacred mysteries or covering them with some other extraordinarily inspiring garments. This was used more often during periods of revolutionary events, waging wars, festivals, Olympic games, etc.

Nowadays, such techniques, on a very small scale, are sometimes intuitively applied (they are allowed to apply) by some "showmen" or organizers of election campaigns, mass involvement of "fans" in commercial sporting events. But as soon as they go beyond the permissible limit of their purpose, they are inevitably cancelled by someone or something (Talkov, Vysotsky, Lavrov, Mikhalkov, etc.).

This non-essential theater with colorful "historical scenery" is not worthy of such close causal understanding and attention, no matter how beautifully and "meaningfully" it is presented by figures of tribune professions. It's secondary anyway. Often in the history of events that occurred, such labels, actions and subsequent events were mistakenly attached to the level of Conceptual power, which were organized only by the level of Structural and Structureless power for background manifestations. And historians and their equal falsifiers, in cases of unsuccessful results on accomplished events, try to courageously seek out "enemy agents" at the level of Conceptual power, allegedly organized by an invisible secret imperious hand.

A vivid example of this is the events in the USSR from the beginning of "perestroika" to the current moment. A huge number of initiative or "appointed" figures rushed to investigate and analyze everything that had happened, with many representatives from all sides and barricades. A large number of those responsible for this act have been found (both at home and abroad), their words and actions have covered with blood everything that had previously been presented as holy. Everything before that was cherished, from the cradle, has been perverted, defamed and trampled in the mud. But there is a problem! All the identified internal and external "enemies-traitors" and "patriots who have miraculously survived" continue to do all the same "dirty things", disguised in other "jackets and with other mandates. But, as in the old days, having embraced together and rallied into a "united" front of initiators, they are rapidly fleeing to some "bright future", i.e., again to nowhere and away from the people, now blaming the unborn, the very terrible future enemies. Only now, something of brazen frenzy and inhumanity has become disproportionately greater, respectively, the number of individuals socially offended by fate and deprived of the former national common value, is catastrophically growing more and more. But in reality, this is just the completion of the procedural processes of part of the old Program, conceptually laid down at the end of the 19th century. Who, once again, will be to blame?

Actually, in this case, as in most others (more interesting only to historians), all this did not and does not have a direct relationship to the "direct hand" of the level of true Conceptual power. Of course, the scale of filth and insults is simply terrifying, but one cannot confuse the truth of the mental plane with the spiritual, especially the conceptual one. It is impossible to artificially invent, i.e., concert-theater speculative Conceptual power, as a scenario to justify its bloody madness and the corresponding actions, muddled by historical "pathologists", to interfere with the true essence of Conceptual power. This is not a matter of the human mind. And the "historical" imitators and tribune buffoons raged, raged and expect to rage on, [yet, another time has come - they can change the "actors" together with their directors and the theater. And it does not depend on people!](#)

Anyone attempting to research this issue, as a rule, are drowned in the cobwebs and mists of the actions of minor performers "from the historical scenery". They themselves always find a state of such depression and ecstatic fading from the level or influence on them of the degree of excessive mystery and extraordinary elevation from the fact of touching something inexplicable, which necessarily introduces them to the sphere of "sacred" initiation.

After such "studies", the participants most often, overnight, become no less than "initiates", and sometimes even direct "rulers" at the level of Conceptual power (N. Roerich, Y. Blumkin, E. Blavatsky, F. Dzerzhinsky, M. Bulgakov, etc.).

This "turned out" better and faster for literary figures, more often for futurologists, they are completely irresponsible for their published judgments, as well as for film industry figures - they are "richer and more convincing" with an assortment of speculative images and spectacular representations invented by them in this subject.

All those individuals, of a singularly or as a group, who were really, and not according to legend, involved as true performers in the preparation and manifestation of the ongoing or future events, could never be in a state of publicity. They must not be confused in any way with representatives of any structures of intelligence or spetsnaz/special forces, they should not be sought out and literary heroes and characters formed from them at all. Moreover, compliance with a mandatory condition was always extremely strictly and rigidly controlled by the System – simultaneous participation was not allowed in actions at the level of Conceptual Power and Structural (Structureless).

All this once again confirms the fact that it is extremely difficult to determine who is a truly engaged performer at the level of Conceptual Power, who is a performer from "historical scenery", and who is an initiated historical upstart or career figure.

The group from the Conceptual Party "Unity", which was the first to dare to present its open vision on this question and to publish its Concept of Public Security (CPS) "Dead Water", has achieved the most successful results in researches of recent time. One should certainly agree with most of their proposed conclusions on a secular and commonplace level. But the purpose of our reasoning, and consequently the level of responsibility for it, is quite different. The main flaw in the results of their study, through no fault of their own, is the absence of that profound level of true knowledge which is necessary for judging the question at hand. It is for this reason that all research has relied on the application of direct or investigative speculation, in which people have been exposed as the leading, generating factor, both in planning future actions, phenomena and events, and in accomplishing them. And the truth is quite different, but that is not the main thing, Russia has spoken in this sphere and about this sphere, and the rest is all correctable!

1.1 Nature and Essence of Conceptual Power.

The true roots of the unsuccessful results in most attempts to investigate causes and the degree of influence of the Conceptual Power lie in the lack of true cognition of it and, first of all, of its Nature and Essence. What in this respect has the System allowed to come out of the true knowledge?

First of all, it is necessary to determine what is its [Nature and Essence?](#)

Somehow Conceptual Power is increasingly covered by a veil of mystical mysteries, occult and religious judgments and has an invisible hidden insurmountable barrier surrounding it. Information and direct or indirect participation in it is maniacally brought to an extreme degree

of unavailability and inaccessibility for most people. Mythologically, it is accessible only to a few "chosen ones" and "initiated", who have designated themselves as such for various reasons having nothing to do with personal merits, achievements or possessing something special, non-human, that was obtained by them, but necessarily and only by inheritance! They always have a confirmed mythological "justification" for all this, as they say, "artifacts", i.e., they have collected sticks, stones, glass balls, crystal skulls, various kinds of written and oral messages from the past itself, etc.!

But why is it that science, as an instrument of cognition of the world around us on a micro and macro scale, has brought the level of cognition of human society to a standstill? It is unable not only to explain, but also to recognize the very fact of the existence of declarative control "from the outside" of the entire course of development of civilizations on Earth, including the development of science itself?

According to the results of all the recent achievements in the level of cognition, modern science has finally admitted to itself that the World created by it, through the entire complex universal system of model representations, is completely different from the true World, i.e., the world around us! It has become very dangerous for them to live in a "virtual house of cards" built by science! And to get out of it is for them a step into the next unknown and unfamiliar.

In truth, that is, without taking into account the opinion of "modern science", theory is only an assessment tool to determine the degree of brain development in certain groups of people of a specific "brain genotype", through cognition of the World. The level of cognition of the World and the degree of Brain development is provided and carried out by influence, contact and control "from the outside". It should not be understood that there is no process of cognition of the world, where people could make scientific discoveries. They were provided with information from the outside.

Turning to the first half of the question, it should be stated that the very Nature of Conceptual power lies in the manifestation (phenomenon) of the Ideology of Conceptual power as controlling information "from the outside".

It is necessary to take into account the invariable obligatory sequence of the program execution of being - a phenomenon; an action; an event. Note that the phenomenon Ideology, within the framework of Conceptual Power, is presented as a predetermining step in the whole future, the personification of being, i.e., the very process of Program executions for the management of society and, in the defining part, the direction of the development of human civilization. The implementation of all Program actions and events related to the mandatory, direct or indirect, participation of the society of people (all or part of it) inevitably begins with the phenomenon of the Ideology of Conceptual Power. "Sacral" (i.e., with the submission of the Management System) in the Gospel was noted: "In the beginning was the Word....".

Ideology is followed by specific management processes in various forms and aspects, of their declarative manifestation in the sphere of Structural (State) and Structureless (Public) authorities, for the organization of strictly defined actions, leading to Program events previously provided by the System in the Goal Vector of phenomena, actions and events.

Thus, the Ideology of Conceptual Power, as the management information of the entire Program Control process "from the outside", was the essence of the most closed, inaccessible, sacred part, provided for a limited circle of performers selected by the System itself, taking into account a specific Brain genotype. And impostors or power adventurers are clowns, jesters and self-promoters, planting their selves for money or in any other way as a special "gift from above or from above by inheritance", for personal purposes to manifest their hegemony over the society. During the execution of the last Program, for more than 4,000 years, the Ideology of Conceptual Power, regardless of the performers, had a strictly antagonistic character of some groups of a Brain genotype, relative to others. In the process of advancing civilization, this confrontation was expressed between States or groups of States.

In the encyclopedic concepts generally recognized by the world, they now accept the following as Ideology.

[Ideology is a pattern of opinions and beliefs that people use to explain and evaluate the world in such a way as to form, establish, direct and justify certain forms and methods of activity.](#)

[In politics, Ideology is a system of views that finds expression in political doctrines.](#) Here is such a convenient, but completely irresponsible finality before the future, i.e., you can justify any mistakes and everything good or bad.

However, thousands of armies of ideological "warriors" broke their spears on the ideological battlefield, heroically defending "their" incompatible points of view, which turned out to be just controlling information, as [the nature of the phenomenon of the Ideology of Conceptual power](#). It was provided by the System only in specific periods, for specific purposes, when implementing the Program processes of development of individual functional groups of people who differ from each other by Brain genotype. The provision and support of its complex changes and the development of the ability to receive control information, as a process of management "from the outside", in changing environmental conditions according to the program (the "cognized" World), was in harmony with the pace and direction of the development of human civilization. This process has been particularly active during the last 18,000 years, including the transitional break in the Program, which is called "our era". There were many wounded, stricken and dissatisfied, but this is a consequence of a limited knowledge of the World (distorted) and the corresponding excessive aggressiveness and limited purposefulness in actions (more often impostors), that led to this result. However, for the old system, this is only "waste material", the formulation of ideology is proof and justification for this.

From the heights of the historical past, as a completed Program, we should pay attention to an important and problematic question - did the "chosen" and "initiated" (minus impostors) participate in the formation of the "future" during the execution of the Program itself? And if yes - what did participation itself mean, if not - what was their role. The answer was enclosed in the second part of the question about Conceptual Power - what is its [Essence?](#)

Turning to the second half of the question, it should be stated that the very Essence of Conceptual Power is a discrete sequential process of bringing functional control information into the consciousness of individual representatives (performers) at a specific "historical" moment with the help of Control and Management Systems and accompanying and providing Complexes.

Due to this, with the use of Control and Management Systems, comprehensive support was carried out in the execution of program actions leading to the results and events in the development of human civilization planned in advance by the System.

It is necessary to postulate that the Earth and Space are a single Software mechanism, which is controlled by Systems beyond the control of man. This is the main point of the existence of the universe. Program changes improve the World with simultaneous changes in biostructures and their habitat, including on Earth.

Any initiative actions or unforeseen deviations that do not correspond to the Goal Vector of the Program Processes lead to opposition from external management and corresponding disasters and accidents.

Ignorance and the corresponding untimely response to the ongoing Program changes lead society to states of catastrophes, especially in the management environment.

We will not evaluate the results of the completed Program, but we will certainly note what concerns only Conceptual Power. Throughout all periods of performance, its role and functions were then harmonious and maximally expedient when it had minimal deviations from the Ideology intended for it, as given from the outside. It was not always possible to prevent political and historical pathologists from distorting the nature of the Ideology of Conceptual Power and further manifestation of actions and program events. It is for this reason that sometimes imperious and political upstarts appeared.

The old Program has been completed and a new One has been formed with different goals and for new conditions. A new set of Goal Vectors (future) has been formed for new phenomena, actions and events that will be implemented differently during a certain period of time through other higher-order Software processes. Not knowing and correspondingly not timely responding to the ongoing Program changes will lead society to states of catastrophe, especially in the management environment. The transition process from the beginning of the incarnation of the above is very brief and has already begun.

The elimination of previously existing connections in obtaining information of cognition and the formation of a new ("other") connection, translates a new scientific basis to the next more perfect level of cognition of the World.

The above revealed a completely different and fundamentally new Nature of the Ideology of Conceptual Power and found fundamental changes in its Essence.

1.2. What is The Meaning of the completed (old) Program?

For the last 18,000 years (especially the last 4,000 years) the Nature of the Ideology of Conceptual Power was in the Goal Vector, which was framed by the following target framework - "From single disunity to concentrated conciliarity."

The framework of this Goal Vector combined a huge number of Program processes, both in the material world and outside of it. For us, it is sufficient to confine ourselves to the material world and only that part of it related to the human biological realm. Many may wonder: were the determinants of all historical changes in the biological sphere of man, followed by processes of change and improvement in the social environment, cognition of the world around us, technical and technological perfection and many other actions, phenomena and events, that we observe today, the final ones?

Yes, absolutely, exactly! And it is not recklessness, it is not a figment of fantasy, it is not an attempt to cross out all the facts of historical actions and events that have occurred and are occurring! The fact is that the whole chrono-process of the previous program, concerning the biological sphere of man, was oriented and represented by the most complex of processes of improvement of quite specific brain genotypes of people and in such quantity, which was planned by their Program, in order to be fully interfaced with the brain of the interventionists.

At the moment, it is inappropriate to consider in detail all the Control Systems on Earth, but there are such. Accordingly, the Goal Vector was focused on the functioning of Control Systems and specifically on the development of individuals from people of a specific brain genotype. The development process took place from a single group of individuals of brain genotype 42, their accompaniment, reproduction and settlement on the Planet in order to give them and work out leading roles in the developing social structures of groups of people who are acquiring the appearance of societies. In the future, the predominant features of brain development were applied from generation to generation. The development of brain genotypes was primary, and all the speculative processes linked into a single historical process of the development of civilization were secondary. No matter how humiliating it may be for us to perceive, however, the development of all areas of culture is also the program processes of the development of individual format abilities of the specific brain genotypes.

Each "historical period" had a particular target framework in the general Goal Vector, all processes had their own correction, taking into account geographical and natural features, temporary conditions, levels of economic, cultural development and other conditions. Even the use of techniques such as "stagnation" in historical development was taken into account, if necessary.

The whole process of implementing the Goal Vector, "From single disunity to concentrated conciliarity", covered a rather long "historical" period and was completed by 2000 with the formation of the so-called "Golden Billion", i.e., "conciliarity" was accomplished. Symbolizing the program process of this was the program of "Globalization". So, is "Globalization" just a small fragment of the forerunner, i.e., a "phenomenon" for future actions and events, namely the concentration of money in the hands of a narrow circle of "specially

chosen"? As you can see, this is not at all what the tribune heralds from the United States and all their territorial "assistants" in Europe and Asia are crying out to the whole world.

Within the framework of the old Program, the whole process of the development of civilization, namely the whole speculative, i.e., the superficial essence of all that is happening, the so-called History, was not the primary and defining aspect. It was not only secondary, but in truth, performed the function of only providing, accompanying and fulfilling the role of legends, in order to reliably isolate and exclude a person from the possible fact of awareness of the [nature and truth](#) in the ongoing processes. And in all these far from simple times of abrupt rapid or slow changes, all the most complex possibilities of Conceptual Power were concentrated on creating the illusion "of the alleged independence of the development of society" – to lead and ensure Goal Vectors, giving a complete illusion to all historical processes taking place. If rapid program settlement of people of one brain genotype in the territories of another was required, wars of any scale were organized. In cases when for a certain period of historical time it was necessary to isolate the territory of one brain genotype from another, new states were formed, small states merged into empires, etc. It makes no sense to revise all the bloody events of history through the prism of what has been said, we do not adhere to this goal.

To our great and sincere chagrin, there was no such targeted and defining historical path of the development of civilization in all its directions, in all spheres of development and improvement of people in knowledge, culture, technical and technological development at all "historical" stages. All this was presented and it was inspired through external management through the tools and technologies of Conceptual Power. The subtlety and depth of saturation of everything happening in the actions was so beautifully and colorfully furnished with decorations, so convincingly and touchingly accompanied on a spiritual and mental level that people had an unshakable confidence in direct and full participation in everything that was happening. At the same time, people gained full confidence in their leading role in the ongoing processes. It should be especially noted that there were no mistakes in the history of man, [he was only involved as a subject, not by his will and his consciousness, in all the processes that he could not control.](#)

The Management and Control complexes carried out the administration either by acting directly, i.e., on certain large groups of people (nations) assigned by them, or through individual performers of contacts who, according to their special brain capabilities (42 and 44 brain genotypes), could perceive control information and be guided by it. In the second case, the Control Complexes always controlled the execution process, provided support to give sufficient manageability to the bulk of people, bringing and organizing actions and events under the manifested Nature coming to the contacts. Sometimes a combined control method was used. In order to ensure the managerial stability of the legends and the undoubted illusory mysteries of management through the performers of contacts, the so-called "Pyramid of Management" and all its component saturation were created, which makes no sense for us to talk about, since this issue has been sufficiently and fully covered recently.

Awareness of the very fact of "external management", as passive participants, in all the historical bustle of the ongoing program processes, is an extremely difficult step and, moreover, not a step for everyone.

At all stages of the historical development of society in the last 18,000 years, we have been accustomed to feel like the king of nature. We have found a kind of "gift from above" and are "fighting with nature", creating benefits for ourselves, we are accustomed and convinced of infallibility in our actions and decisions, even if they are associated with the threat of complete destruction of each other. They managed to put into our consciousness that We supposedly Have Everything! But, in extreme cases, when we are really bad, then we have the last lifeline – to turn to the Lord God and ask the Almighty for forgiveness and help for everything we have done.

The time has come and the present circumstances have allowed us to realize that the past History previously presented to us is nothing more than a formalized pallet of chronologies.

Any jewel-like precision of saturation, with its actions and events with a given sensory-spiritual sphere, brought to its conditional full awareness and touch, and controlled from the outside, is a speculative and effective accompaniment of forced participation of people in program processes. This is the nature of the former Conceptual Support, that is, the former Conceptual Power.

Its manifestation through the performers' contacts for further implementation through actions leading to events, is its controlling function, performed through the old Control and Management Complexes from the former System.

1.3. What is the Essence of the completed (old) Program?

It is incredibly difficult for man to realize that he, in his opinion, being a natural perfection, is in reality not the culminating peak in the natural world around him, at least on the scale of the Earth. How secularly unacceptable and difficult it is to argue about it; however, humans are only a certain component in the harmony of the biological sphere, which has been miraculously programmed by someone, exists and is being perfected under some kind of control from the outside.

Moreover, it "turned out" that almost all of this happened outside of the will and desire of people over the past 18 millennia. People rule (reign) only in that part of nature surrounding them, in which they were allowed to do this by the level of management from the outside within the framework of the old Program, i.e., by Conceptual Power.

The complex orientation of the entire biological sphere and its current state of harmony over the past 18,000 years, did not appear to be some elementary simplicity and strict linearity in its development, if it can be called such. It is time to stop the obscurantism in judging the origins of humans and their development. Using the "teachings" of Darwin, as well as the animal reflexes discovered by Academician Pavlov in his subjects or understanding the

functional nature of the human brain through the opinion of Bekhterev, is no longer relevant. Medicine from pathologists is not knowledge about Man.

The material world for us and around us is one. There are no other spaces but those that are only for us. But there is a level of "underdevelopment" of that scientific class, which formed and still continues to form "cognition" in the world around us where it does not and cannot exist. For them it is that "sacral looking-glass", of which the truth could not find them for a number of reasons, though independent of them. Such knowledge was given to them from outside by that System, for which the Earth was only the sweet fruit of the results of the intervention and its temporary application.

Society (understood as "civilized") for more than 18,000 years, has been forcibly at the lowest stage of its "human" development. The transition to the next stage of development, in accordance with the processes of the new Program, is not only the connection of a new basic foundation for the formation of spaces - dodecahedral, as the next level of development. A complementary consequence of this is the inevitable change of the charge cycle for the full (all true native) octave range of the Earth's energies and the recording of information about the next step in physics, chemistry, biology and other areas and tools of true knowledge of the World. The prospect is incredibly grandiose, bright and quite attractive, but, of course, the question arises, [how did the "capture" of the Human brain happen, why was all knowledge given to him outside of his will, why was He used as an object, and He could not, at the least, be aware of it?](#)

Now, without understanding this aspect of the issues, the further development of the brain within the framework of the permitted awareness of this, will be to some extent one-sidedly flawed. Just like that, everything degrading that happened to a Human Being, can't be crossed out. A man will now be "recreated" as if again, i.e., come to his true state, if it can be called that. In the memory of the brain, you can erase everything unnecessary, but sometime, in the very distant future, these questions may logically pop up. That is why the consideration of the Nature of Conceptual Power is singled out separately in our judgments. It was through her (Nature), as a kind of technical and technological conducting base, that the manifestation of all software installations (i.e., Essence) was carried out with subsequent actions and events related to a Man, his environment and all the necessary energy support of this most complex process.

To this end, "Truth" has allowed us to return to that part of the chronological process of the phenomena and events that have occurred that directly concern Man and the actions performed on him and with him. Before attacking us, the Ebrov civilization studied the structure of our Cosmos. They learned the golden ratio, the conditions and principles of possible rearrangements of biostructures to suit their needs and programs, predicted the creation of possible symbioses and forms of mutations for their future experiments and practical applications, etc. The mere fact of finding a huge number of biological monsters of enormous size, located in the World Ocean at depths of more than 4,400 meters, could demonstrate a lot. But this secret has always been guarded by them with special rigor.

The program set by the Control System and the process of its execution should be completely identical. It depends on the degree of preparation of the brain of those who were selected for execution as a contactee. The main selection of contactee performers was carried out through Kailas, since all matrix storage of all brain genotypes and, moreover, weekly monitoring of the brain state of the entire population was carried out by them, there. The Programs included "Concepts of a step-by-step format", which is why the power was called Conceptual. The control result during execution had to completely coincide with the concept originally laid down.

If the performer's actions did not lead to the event envisaged by the concept, then the performer received a "kick". As a result, there could be either a "flight", for example, the Brezhnev stagnation, or a "short flight", like Gorbachev's perestroika. Especially in the last century, the Conceptual Power realized through performers has not always kept pace with the Program. What kind of interference occurred in the execution process, which prevented the correct perception of Program functions?

The fact is that it was during this historical period that the balance of the hierarchy of Structural and Structureless power was significantly and frequently disturbed. Often the structureless (public) power gained a much more influential impact on the effectiveness of real management in actions than was envisaged by the step-by-step concept of the program for future events. The reason is that there were masses of social structures, such as parties. Through the parties, it was additionally possible to destroy the possibility of independent thought, and in the twentieth century, as an instrument of Structureless power, a step-by-step concept was provided for. However, if the performer failed to find a leading role in the party, then the effect of his performance gave serious failures and this significantly reduced the effectiveness of his management as a performer and contactee. Moreover, in the same period, the role of secret clan organizations and structures from the previous century had not weakened yet. Many contactee performers from this environment continued to actively function in the general management process, since their actions obliging them to carry out the planned program events, had not yet been completed.

Thus, the effect of confrontations, which is not desirable in management, began to manifest itself, which should be expressed as extreme egoism. It played a negative role in the effectiveness of the execution of the laid programs of the management process. The effect of the program bookmark on the rigid hierarchy between representatives of the brain genotypes 42 and 43 began to blur, the effects of a sharp increase in "business activity" began to manifest themselves, only, not in their business, i.e., not in their intended purpose. This was especially pronounced at the end of the twentieth century.

The brain of most performers was not ready to reproduce the functions set by the System, and it began to purge the "golden billion". During the purge, it was necessary to transfer the brain of the "golden billion" to a neutral abstract state, which was achieved by introducing a distracting verification mechanism, expressed as "money is a commodity" and the main task is to accumulate it at any cost. At the same time, they did not put on the "brakes" (K. Marx: "There is no crime that a capitalist would not commit for the sake of making a profit").

But, in 2000, the System attracted a number of other performers, who were prescribed completely different administrative corrective management principles related to preparing for the transition to their other program states. All this could eventually lead to a complete managerial collapse and the destruction of the managerial principle, the signs of which are already evident and complete. One fact of the economic and financial crisis, which actually does not exist at the moment, is enough. We will not be distracted by the assessment of the current state of the management process. It's not essential.

The main thing is that at this moment, the subprocesses of the new Program, the entire system of the Nature of Conceptual Power has been completely rebuilt and reincarnated. This means one thing – the old Conceptual Power no longer exists, and the motor habits and domestication of former performers will quickly pass. For those with whom this process will show signs of transition to a protracted format, the new System will react accordingly.

1. Science as an engine of progress.

The role of science in transforming human beings into their original state.

Science, as a system of knowledge about the reality around us, has never been considered as a factor of regression, especially at the present time. From the definition of "Science" (Brief Political Dictionary, Moscow, 1987):

"Science is one of the important spheres of human activity; a form of social consciousness; a system of knowledge about the laws of the development of nature and man. Science develops, theoretically generalizes and systematizes knowledge about reality, the surrounding world, discovers laws, explores and explains the processes and phenomena that make up the subject of its study. In the general system of science, it is customary to conditionally distinguish three large groups (subsystems): social, natural and technical, which are separated by the subject and methods of research. Depending on the orientation and direct relation to practice, the so-called fundamental and applied sciences are distinguished. In the process of development, there is a gradual differentiation of science, the emergence of new specialized branches of it. At the same time, there is a process of integration of science, which manifests itself in the emergence and development of sciences that are at the junction of two or more fields of knowledge and occupy an intermediate position (biophysics, technical aesthetics, etc.).

Under the conditions of capitalism, science is put at the service of the exploiting classes. Socialism opens up unlimited opportunities for the development of science. Using these opportunities, the Communist Party and the Soviet State take daily care of the development of science..." etc.

So, what is useful to choose from this definition?

1.1.1 Purpose and Goals of Science.

The purpose of science, as can be seen from the definition, is the study of the properties of the phenomenal world, the formation of a system of knowledge, and the conclusions of laws about the world around us in order to successfully exploit society under capitalism (once in service, then there must be wages). The same is true in the conditions of socialism, but for free, that is, on the principle of self-sufficiency, i.e., theft. The structure of the social order differs only in its attitude to science - whether it is paid adequately for the result or not. The society is provided only with the results of scientific research in the form of atomic bombs, tanks, tights, synthetic food, etc. As a rule, along with the whip (control system), a carrot (to society) is sought. Science should not be open, otherwise its meaning is lost. **Therefore, the goal of science is to form a whip for the exploiting class (or some mafia structure) to control society, both at the level of public relations and using new technical means.**

1.2. Means of achieving the goal.

The means to achieve the goal should include: the method of organizing research and controlling research; the method of implementation; technical means.

1.2.1. The method of organizing research and control over research.

It is considered that scientific research is carried out only in conditions of providing opportunities for such research. However, here it should be divided into two directions. The first is that the actual scientific development does not require the involvement of large technical means - this is, as a rule, work on displaying formulas, dependencies, explanations on paper or using a computer.

The second is the attraction of large technical means in the absence of a scientific base (here we are not talking about checking the results with the involvement of technical means, and even more so about the problems of implementation). For example, to check the charge density of a proton atom, a synchrotron is built, since there is no theory on its structure.

Therefore, only the first direction should be attributed to science. Separating it as fundamental and applied is not legitimate, because science is one. And, moreover, to differentiate it into components, is similar to dragging a mammoth into a cave - to divide it into parts and study each part separately. The applied part is what you can eat, and the fundamental part is the skin on which to sleep. Let's consider the first direction separately.

a) Targeted research within a specially created structure (laboratory, institute, academy, etc.). Contests, tests, family ties allow you to select the necessary composition, which later grows due to theft, as well as due to the ability to survive in this structure, having the appropriate titles.

b) "Insight" is a one-time release of needed materials, demanded precisely at some critical moment or in case of extreme necessity. These are rare loners and the scientific community is not responsible for the results of their work, but this "insight" helps to bring the situation out of crisis (for example, the method of separating the magnetic pulse, without knowledge of which it is impossible to test a new atomic bomb). This is the case when it is possible to get "from dirt to riches."

c) Autonomous research. This is the most inconvenient case for science.

First, autonomous research requires having a "rear," that is, finances and the ability to conduct research, i.e., to be independent of any circumstances. The results can be kept for hundreds of years, published, and displayed in academic structures, etc. Since autonomous research is uncontrollable, they tend to be confiscated, stolen, etc. Then it can be handed over to those scientific structures that are supposed to be in charge of this kind of research.

What does "control" mean? None of the areas of scientific activity should be outside the goals set for science, namely, the development of mechanisms that ensure full control of society. Hence the slogan "he who does not work does not eat" applies to scientific work. If it is possible to conduct autonomous research, [then the fiscal authorities have hundreds of methods for confiscating materials or the resulting research product](#). Control is necessary so that all scientific research is subordinated to one goal, and none of the directions contain seditious orientation.

So, then what is meant by the word "science"?

The answer to this question will be received after clarifying the meaning of information fields. But we can say beforehand: ["science is not only a way of broadcasting when reading the](#)

information field, but also the quality of broadcasting for the period of time that is necessary for the implementation of the information received". For such work, a person must have a brain, a system of connections with the appropriate information field, have an appropriate encyclopedic education (so that, at least, not to get confused in the names) and the opportunity to do this work.

1.2.2. Method of implementation.

The methods of implementation should include only the implementation of options "a) and b)" from 1.2.1. Option "c)" is not subject to implementation, since it does not meet the goals of science ("Ignorance is power").

So, the method of implementation is the formation of a societal management system for the respective mafia clans and bringing the charms of such management to society. When organizing the management system, the principle of an ice hole is used – "what floats is easier and smells worse". In case of dissatisfaction with their needs, society seeks to get rid of the floating layer. Its place, on a purely scientific basis, occupies a new layer, slightly different in quality. If management systems can be replaced (capitalism, socialism, democracy, etc.), then mafia clans that are the customer of science cannot be replaced - the clan is removed entirely, or modified for new goals and objectives.

There are no problems in forming the consciousness of society - it does not exist. If the development program is formed, then the corresponding mafia structure selects the appropriate management system for the program and presents it to society, having previously indicated the cleaning of the hole. The unconscious elements of society submit to the implementation of the developed program through their worship, suppression, enslavement, etc. Science, seeking knowledge (or rather, broadcasts it from the information field) and explaining the current state in the development of society, is not part of the management system and is not an integral part of the mafia clan. At the same time, science itself is not available to either the management system or the customer (mafia clan). Therefore, there is control over it.

The structure of science is a multi-layered pyramid, where each productive layer is framed by a system of control. The management of science is conditionally selective, it is appointable, and it is negotiated between the top of the science pyramid and the customer. Those who directly shape the knowledge system are always in danger of being driven out of the pyramid if they fail to get a grip on any chair after giving out a result. As a rule, the first construction of a stable chair is the degree of Doctor (Doc Torah) of Science. An academic's chair can already float in any hole. The pyramid is always the same, despite the abundance of academies (more than 180), research centers and institutes. All the secrecy of research is hidden from society, not from the "bricks" of the pyramid.

Each country has the right to have its own system of management, but it has no right to develop according to another program, the goals and tasks of which are determined by the pyramid. It is possible to be ahead in the development for a month or for 50 years, but it is impossible to go across or in the opposite direction from the uniform pyramid which is transmitted from that information field concerning which it was built. There are not and cannot

be different pyramids in one information space. At the same time one scientific pyramid cannot work in different information spaces as the purposes in each space are different. In this case, the information space with the conditional number 4 (communication frequency at 75.4500 octave) is considered. The density of this information field, due to the imperfection of the life support system itself, which provides the information space itself, is constantly decreasing, which leads to a mismatch of actions and a blurring of the goal.

1.2.3. Technical means.

The means used by science, in addition to the genetic data, we will call technical means. These are the means by which the data obtained from the information field is transformed. This can include the level of knowledge that was acquired when the previous target program was achieved. However, due to the decrease in the density of information space No. 4, it is not possible to use new technical means, therefore new tasks have to be solved with the help of repeatedly tested old technical means, which at the present stage are already an anachronism and cannot serve as a means to achieve the goal.

What are these means?

It is known that one of the programs contains material for the conversion of nuclear reserves into mineral raw materials. Then this work must be carried out on a basis in which everything is known about the atom, its structure, morphology, albedo, etc. But modern science has a system of metric units based on horse constants, the model of the Bohr atom, the periodic table. Any attempt to rebuild the technical base rests on no information (noninformative), and this makes it difficult to understand the goals.

In science, revolutions rarely occur, happening only in connection with a radical change in the information base intended for the implementation of a new program. Without bringing a new technical base to science, it is impossible to ask for results from it, no matter how quickly they are needed. What is the reason? Why is the old information base not suitable for solving new tasks? After all, it is on this basis that both nuclear weapons and spaceships have been created, etc. Let's briefly consider the basic concepts of the old information base or the technical means of the previous program.

1.2.3.1. The system of physical constants.

The most important is the power constant, measured in joules, ergs, watts, etc. But this constant is a conversion from horsepower: 1 hp = 746 watts - from an American horse and 1 hp = 745.7 watts - from an English horse. What color was the horse, how many teeth did it have, how was it shod - on these questions, for some reason science is silent. It is also known that the Supersystem indicates a clock interval of time (24, 60, 60). But the use of such an interval is permissible only in macro systems, with external connections. And when calculating the proton atom, the time is different. It is also established that the clocks on the roof and in the basement of the skyscraper show different times. But that's not all. The clock magnetic pulse from the Sun comes at a completely different time than that assumed using horse constants. The same can be said about metric units, concepts of inertial mass. Science has no idea about non-inertial mass.

1.2.3.2. The Atom.

The Bohr model, and with-it quantum electrodynamics and electromechanics, are today the squalor of the times of the pithecanthropus. But there is nothing in return yet, and as before, all calculations are made with electrons, protons (which collide) and quarks using the same tool. The waste of colossal funds on the search for cosmic particles (that is, ion formations) is completely empty and has not been justified so far.

1.2.3.3 The Mendeleev Table.

Closing the group of technical means is the Mendeleev Table, i.e., the table of macro-ionic structures without regard to energy features and without the meaning of their existence. The table is built on the structure of the Bohr atom and if it is replaced by something, the whole technical base will collapse.

In order to avoid this, it is necessary to update the concepts, clarify many parameters and move to a new technical basis.

If biological structures are not genetically prepared, then it is necessary to increase the density of the information space in order to start implementing the program for new purposes in a fairly short time.

1.3 Scientific basis of other information spaces.

Each life support system forms its own information space for itself. There are 18 such spaces on Earth, and they are all designed, like #4, to run their own programs. Consider, for example, the scientific basis of information space #6. It is a space built, as in the case of the autonomous proton field, on the basis of the proton atom. But its density is insignificant and does not exceed the density of information space #4. The octaves of communication with this space are 71.625625; 73.625625; 77.625625 and 79.625625. The information in this space is of special value because it contains all data on atom structures and their energy characteristics. In addition, there is information about the current state of the program and its purpose. Other spaces, such as space number 11, contains information (similar to a stenographic report) about all changes occurring in the neutrino space. The first communication frequency (octave 91.450450) is found, but the density of the space is extremely low. The information spaces do not overlap and cannot be seen without knowledge of their existence. Information space No.2 contains information about the location of mineral resources on the Earth, ways of their transformation for the purpose of creating non-inertial masses with the possibility of moving at a state of 50 and 60 octaves.

1.4. Science, power and religion.

Science cannot be created without an information space. No research can begin or even be planned without knowledge of the environment in which it should develop. Therefore, specific knowledge falls on the environment where it was obtained. But this does not mean at all that knowledge was, as it were, in an information ball, subsequently deployed in space. Imagine a spider weaving a web. An analogue of this is the creation of an information space. The purpose of creating a web is to attract all autonomous structures crossing the Cosmos, "sucking" information from them and distributing it through their own information space through media created in their image and likeness. Thus, the realized ideas of J. Verna, and

other great science fiction writers are nothing more than concrete information transmitted to them, received from another "fly" that could not overcome the web that encircled the Earth.

The information space is built exactly according to the type of the web (Subsystem), the spider itself, as a control structure – is the System. But there are 18 such spiders on Earth, and each has its own information space. Further, in order to ensure the safety of the web, systems of dependence of objects carrying stolen information (scientists) on various conditions are formed in order to prevent the received information from entering other webs. This is the formation of a corridor, where the left wall is the system of power, and the right wall is religion. Everything that corresponds to the genotype of the formed information space is driven into these limits and is maintained based on the security of the System. If you bring down one of the walls, the System creates a new one, therefore, within the framework of the already created information space, it is impossible to destroy what is not subject to destruction.

Science should be controlled by the authorities (it is possible, of course, to allow some academicians and even doctors of science, who have their own chair, to swim in the ice-hole together with representatives of the authorities) and have a backup option to write off all failures. The borders of the corridor are defined by the density of the information field, which also has notions of the energy information density, holographic mapping, time and reaction space. Inconsistency of the corridor parameters with the objects for which it is intended, leads only to the fact that no System will be able to use the necessary information even for its own needs. Considering the presence of the Russian musical row, which is successfully used when working with spiders, we can assume that such musical (8-register with the last note NA) row can be used for a radical change of web properties even in conditions of existence in the information corridor itself.

By selecting contours to form the NA tone, it is possible not just to superimpose the information space, but also to ensure that the spider simply escapes in order not to be eaten in the conditions of information hunger.

2. Measure

A measure is a system of quantitatively expressed human relationships with the outside world. A technical measure is the use of various technical means and techniques to achieve consensus. Such means are the systems themselves, for example, SI (meter, kilogram, etc.). There are English and American systems of technical means and techniques. There is a fathom (oblique fathom, village fathom - counted 12 types of fathoms, and all have different sizes).

The measure was introduced when barter entered into the management system. In the course of development, the measure was refined, supplemented, as if improved, but its meaning remained the same.

The first (known) installation of the measure was carried out by the Sumerians. Thomas Jefferson, one of the founders of the American state, did the same. On 4 July, 1776, he proposed a new system of weights and measures, which is currently in use. Jefferson, like the Sumerians, used an anchor pendulum (double second) with a length of 149.158145 cm (for the Sumerians, this corresponded to 3 kush). The Jefferson system proved to be closely related to the Megalithic and Sumerian systems. If we take Jefferson's 366 furlongs and square them, we get 39961.257 km (polar circle).

Note that both the Sumerians and Jefferson used a pendulum to set the measure, that is, a device operating in the established gravitational potential for material structures. The measure established by them is a relative value and cannot be applied, for example, on Alpha Centauri, because there are different ratios and gravitational states. The established measure is applicable only to the Earth, but since the Solar System uses one clock built on the 64th octave, it is better to buy gold bars on the Moon, and sell them on the Sun, where $g = 270 \text{ m/sec}^2$ on the surface.

For fans of Einstein's theory, we can propose a problem:

To what height (from the surface of the Sun) is it necessary to lift a football so that the Sun disappears?

Gravity is set by the Control System, and if gravity also changes when the Program is changed, then there will be a completely different system of measures.

3. Formation of space for human life.

As modern science proves, after the formation of the Earth from a protoplanetary cloud, the remnants of dust (not suitable for the formation of the Earth's surface) formed a living cell by chemical reactions. Obviously, any student can reproduce these chemical reactions in chemistry lessons, because it's so simple.

Some, of course, may object and betray a terrible secret that a living cell was brought to Earth from another planet. But there is a slender, time-tested theory of the Big Bang, when the entire universe or Cosmos was located in one small point. And suddenly this point exploded on its own, and its fragments formed dust clouds, transformed by chemical reactions into stars and planets. Even if a living cell was brought to Earth from another cosmic body, then this body basically also consisted of the same dust as the Earth. Therefore, it makes no sense to accuse other planets of throwing a living cell to us, especially since individual specialized Academies cannot yet determine the method of transferring living cells in Space. To carry on large artillery shells (Tsiolkovsky) - it does not work yet. The science of Astronomy claims that any action taking place in Space can be reproduced on Earth. Presumably, this is their way. If they got at least one living cell of any structure out of the dust, then there would be no more questions for them. But!

We live in an era of epochal discoveries. A complete list of these events is given in the monumental work of the President of the International Academy of Informatization, I.I. Yuzvishin. This work is a "concentration" of all scientific thought of a separate "chosen humanity" and will obviously be published not only on Earth. Page 329 shows the chronology of world history, with a total of 45 items. As the author modestly points out, his work completes the chronology of the development of the universe. Point 1 is the birth of the universe, point 2 is the birth of the Earth from a cosmic gas cloud, and so on. Point 45 - the creation (by Yuzvishin) of an information-vacuum system of the universe. Therefore, this work is on a par with such events as the birth of the Universe. The book has a strategic nature - after its publication on other planets, not a single UFO will ever come to Earth again, and children in all kindergartens of the Universe will be scared of the Earth.

But the author did not indicate what the reason was for the creation of the Universe and whether the Universe itself is the waste of another process. [There is an opinion that the reason for the creation of the Universe was a fire in the "space bath" in the absence of instructions for its operation, which is consistent with the concept of the Big Bang and the formation of the Hubble sphere, so that the rest of the Cosmos could not interfere in the processes of creating a living cell from dust.](#)

The basic energy constant of modern science is Horsepower, because everything that relates to a scientific description is "horse literacy", and all scientific ideas are only from the point of view of a very smart horse.

It is known from the Soviet popular science literature that a modern person on average (with a weight of 70 kg/154 lbs) consists of:

oxygen at 43 kg; hydrogen at 7 kg; carbon at 16 kg and phosphorus at 1.5 kg.

The rest of the table of chemical elements are presented in mg, including small deposits of uranium, too. [Therefore, every person is very dear!](#)

At the initial stage, after thoroughly mixing hydrogen, carbon and oxygen and adding the rest of the elements of the periodic table in the form of spices, we got a living cell. The secret of spices, unlike the secret of Coca-Cola, was eventually lost, but the cell itself has been preserved and boasts an apparel of Nielsborium and Kurchatov. When creating a living cell, of course, no high technologies were required – the initial compositions were pounded in a "mortar" and then heated to the desired temperature (obviously not lower than the evaporation temperature of Tungsten).

According to Yuzvishin's fundamental research: "Man, like the whole universe, is characterized by a five-dimensional measurement system and seven states - solid, liquid, gaseous, plasma, information-physical vacuum, informationogenic vacuum and informationogenic." [That is, a person practically does not need a living cell anymore.](#)

There are, however, modest statements by biophysicists of the Edinburgh School (England), who had the temporal characteristics of DNA development. They showed back in the 80s, that [mutation of the monkey genome into the human genome takes more time than the entire age of the Earth \(more than 4.5 billion years\).](#)

At the same time, mathematician Chandra Wickramasingh and astrophysicist Fred Hoyle (worked together) came to the conclusion ["It is more likely that a hurricane sweeping through a junkyard of old airplanes will assemble a brand-new super liner from scrap pieces, than life will randomly arise from its components"](#).

Those who wish to find out their origins directly should take advantage of Academician I.N. Yanitsky's instruction ["Methodology of Communication with God"](#) (22.10.1997). This methodology was given to Yeltsin and was apparently the main scientific guide for making the "most important" presidential decisions of the time.

[The formation of space for human life \(and all biostructures\) should be understood as the acquisition of a structural System of electro-magneto-gravitational frequencies, in where it is possible not only to create a living cell itself, but to maintain its existence in various combinations, i.e., to form a controlled life support. In addition, it is necessary to have: Control Systems, Energy Pumping Systems and Software Systems, to set the current functions performed by the brain.](#)

[The base for creating such space is the Octave - \(2ⁿ\).](#)

The exponent of degree "n" is the octave on which "Space - Time" and all kinds of support and accompaniment are built. Some of the older Systems used the "golden ratio," but they did not know that it could not be "transported" to the Big Dipper.

The octave is also the musical series (DO RE MI FA SOL LA SI). The octave is the basis for constructing a quartz oscillator in any frequency range. Example: octave 93.126437216254.

It is necessary to take a prime and an adjacent prime number from the range 293 - 294 and, depending on what you need to get – potential or gravitational potential, use base 93 or 94. The rules for composing the mantissa, and eventually the frequency itself, are given in separate works. It should be borne in mind that modern science has an idea of the states of matter: solid -> liquid - > gaseous -> unorganized plasma.

Actual states:

Highly organized plasma - > the material world (solid, liquid, gaseous).

The material world is just a drop in an ocean of highly organized plasma. The entire technical control and measuring base of people is built on the basis of the material world (no higher than 32 octaves), therefore it is not possible to measure anything above 32 octaves. Beyond 32 octaves, all the necessary measurements are made by the Control System itself.

4. Control Systems or Supersystem. Fundamentals Of Life Support Systems.

We do not live on a meteorite, around which a gas environment was randomly formed and life also accidentally arose as a result of mixing the remnants of dust that is not suitable for forming the surface of a meteorite.

Any form of life requires frequency balance support, and this support is provided on a temporary or permanent basis (System). Biostructures on any celestial body have only the frequency spectrum provided by the System. This frequency spectrum is provided either by UFOs (a dome is created inside which the life of the biostructure is ensured, for which the frequency balance is unique), or by the object itself.

If the physical parameters of a celestial body are suitable for the formation of a living cell, then a life Support System is created, which, without a UFO, provides:

1. Monitoring the state of the noosphere.
2. Storage of the autonomous brain.
3. Brain transfer
4. Maintenance of the autonomous brain.
5. Communication with the autonomous brain when changing the program of actions.
6. Memory correction (according to the template).
7. Partial elimination of the brain after death, followed by its transfer to other biostructures, animals or the creation of humanoids on its basis.
8. Communication with the planet from where this civilization was transported.
9. Brain development according to the program.

If a person dies before the allotted biological time, then his brain, with a complete match of all biological parameters and all communication systems, is rewritten to the newborn. At the same time, partial memory retention is possible, as an exception. Even more rare is the complete transfer of the brain to another "conveyor" (DNA). Two such cases are known - this is the "Taganrog elder", who had the complete brain of Alexander I and Anastasia, whose brain was transferred to several women. Studies pointed to different DNA, but could not explain the phenomenon of memory.

The elements of the System (Moon, Sun, etc.) bring UFOs and, in the future, the System ensures the existence of the UFOs themselves.

The Life Support System (hereinafter referred to as the System) is a unique structure designed to perform the following functions:

- support of life on Earth within the ring formed as a living space (for Earth, this ring is a meteorite layer);
- development of life according to the program embedded in the System and adjusted Supersystem;
- information protection from external interference of other Supersystems;

- physical protection from objects of other Supersystems (UFOs).

4.1. Information bases for the creation of the System.

Any Supersystem that has the ability to create a System on a Space Body of the Earth type should have the following features:

- information exchange with the future System should be coordinated with the passage of a packet of information through all types of grids from the location of the Supersystem to the ring of the System;
- information package must not be decrypted by any other Supersystem or System and cannot be used to harm the System and the Supersystem;
- information exchange Supersystem - System - Subsystem should not violate the nested program of current development;
- information exchange System - Subsystem should serve only the tasks assigned to the System, therefore, any interference in information exchange should be excluded, even by destroying either part of the Subsystem or the Subsystem itself as a whole (if necessary, then the System itself);
- Supersystem must have complete information about the Cosmic Body on which the new System and Subsystem will be created, namely the clock intervals of the lattices, albedo, charge densities, types of atomic structures, energy features of atomic bonds, etc.

4.2. Biological foundations for the creation of the System.

A system on a Cosmic body is created for the purpose of forming that biological structure, which should be completely under the control of this System and fulfill its program. Any other form of life on the Cosmic Body that exists before the organization of such a new System must either be subordinated to the solution of the tasks of the System being created, or destroyed if it is not able to be involved in solving these new tasks. Any other System existing on the Cosmic Body must be transferred to the subordination mode of the new System.

The biological basis for creating a System is a most intricate complex that includes not only the problems of transferring structures from other planets to form new biological individuals, but also their adaptation to new conditions. This is the use, if possible, of all the achievements of the old Systems existing on this Cosmic Body, provided they are fully subordinated to the solution of the tasks of the newly created System.

4.2.1. Transfer of biological structures.

No biological structure can be transferred in Space in its original form, especially through lattices that simply eliminate it when such a transfer is attempted. A biological structure is a complex set of nodes connected in a certain sequence and harmony, consisting of different types of atoms, which also have connections with each other on various information octaves. The rupture of even one connection during the transfer from one Cosmic body to another can be irreplaceable, therefore, breaks in ties are not permissible.

Any type of object (UFO) can move in the structure of the grids of the Cosmos and the Cosmic Body, but only at 50 and 60 octaves of an electric pulse. The octave difference determines only the method of movement - magnetic or electric. It is the object that is able to move biological structures to any point in Outer space. But each object, and there are quite a

lot of varieties, both by purpose and by power, can have only a certain number of biological structures that are not subject to change when the object moves. This is not Noah's boat. These structures are protected by the gravity-magneto-electric generator of the object itself, designed to perform specific tasks. As a rule, complex biological structures are transferred last, when all those forms, whose loss does not cause target damage to the Supersystem are already transferred. This way of transfer is accepted in the Cosmos for organization of any System and formation of the Supersystem as a step-by-step and gradual development of "life". Random appearance of more organized structures in conditions of unpreparedness of the System can only lead to negative consequences and cause a chain reaction of the System destruction.

According to the "Maxim" table (Table of chemical elements), any complex structure can be collapsed with the minimization of connections and information octaves of exchange potentials. For example, if K (potassium) ions cannot be moved, then these ions are pre-converted to H₅ according to a certain scheme, while the octave increases to communicate with one of the octaves of the object's gravity-magneto-electric generator. Since the number of such bonds is small, the number of ions carried on a cosmic body cannot be infinite. At the same time, if there is no possibility of transferring the entire structure, only that part of the biostructure which can be used is transferred, but with a different morphology, on a new Cosmic body. Conditionally, we can give such an example: if it is not possible to move a centaur, then the intestinal tract is transferred, which is used on a new Cosmic body, to form a new biostructure, for example, an elephant.

However, there are also rules for the existence of biostructures - they must have an aesthetic appearance, and horrifying mutations are unacceptable. This is embedded in the System's program. The system itself is also transferred in a similar way.

When the gravity-magneto-electric generator of the object is insufficient to complete the movement, then reserves are forcibly used - portable structures as sources of additional energy. When reaching the final destination and transferring the biological structures, there may be a discrepancy between what was collapsed and what happened during the transfer. In this case, there will be no additional information about the changes - movement is automatic and the object generator just uses the power and does not record where it is coming from. What is the danger of this? For example, a whale was transferred, but after transformation, a viper appeared.

4.2.2. Alignment with the lattice of the Cosmic body.

Any biological structure transferred to a Cosmic body is not a ballast for the System, but performs quite specific functions.

These include:

a) Control;

Control functions inform the Control System about all changes occurring in the Subsystem. Any violations of the conditions for the existence of biostructures are to be corrected in such a way as not to disrupt the execution of the program.

It is important for the System that rain, for example, falls where it should, and the presence of rain at the wrong time of year and in the wrong place should be perceived as a violation of the program.

Therefore, biological sensors must correspond not only to the lattice structure in which they are located, but also uniquely identify any changes occurring in the Subsystem. And this means that it is unacceptable to change the type of biostructures when they are moved to a new Cosmic body.

b) Stabilization;

Any biostructure transferred to a new Cosmic body must have a complete connection (one-way or two-way) with the System. If the System itself is being formed, then the connection must be with the Supersystem. This connection is necessary for the complete identification of the biostructure with the program of those changes to which it is subject, in the process of evolution or some transformations to perform other functions. For example, to transfer to another Cosmic body.

No biostructure transferred to the Cosmic Body should have the ability to be subject to change without a System program. If it somehow manifests itself, the mutated biostructure itself is destroyed, since further use of it may be harmful to the System. Any biostructure must be able to independently resist any attempts of its mutational changes without the System's program, including mutation of metabolic structures and mutation of communication frequencies. If the communication frequencies of a biostructure with the System are disrupted, it can be taken over by another System, in the execution of another program. A different System must not be allowed to get "free" working material for execution of a different program than the one the biostructure was created for.

Stabilization of the characteristics of a biostructure is the basis of its own existence. If another program seems better, it does not mean that another System will fully provide the biostructure according to its desires. As a rule, its capabilities are used, and then simply liquidated in any acceptable way.

However, the very existence of the biostructure and its stability of development under the action of the System program also depends on the parameters of the Subsystem, and if the biostructure is unable to evaluate individual properties of the Subsystem and adequately respond (and transmit to the System) to all changes occurring in the Subsystem, then such a biostructure becomes worse than ballast.

c) Continuity;

Any biostructure in the ionic state exists for a certain time, so it is extremely important, not just for the process of reproduction (or the creation of their own kind), but also for continuity of all functions belonging to a given genotype. Reproduction is not a mechanical process, but a sequential transformation of the carrier octaves in the lymph, which allows, with a stable state of the Subsystem lattice and a uniform flow of information from the System, to obtain a given genotype with conditions of strictly programmatic mutation or improvement. No external processes should affect reproduction and succession. If detected, the genotype is destroyed first and only after that, is the external environment is changed.

d) Communication;

Each biostructure has direct and indirect (backup) communication frequencies with the System. Here is one of the most important features of the development of biostructures.

The presence of a connection determines the life of a biostructure, without a connection there is no life. But the connection may be different. There are many types of biostructures, and the connection is divided. Each structure has its own connection. Some biostructures are united by communication octaves, but this does not mean that they can exchange information independently. Communication is the most susceptible to external changes in the functions of the biostructure. Communication, as a parameter, cannot be controlled by the biostructure itself, which means that even a small shift in frequency or potential density entails distortion of information, which translates the biostructure into a disinformation state. As a result, the System receives misinformation about the state of the Subsystem, and what this leads to will be shown below.

The shift of the communication octave in the biostructure translates it into the state of the transceiver, and this is not the development of the System according to the program. Such a state of the biostructure allows not only the reception of information flows that are not intended for it, but also to use these information flows at its discretion or to meet its own needs. This translates the biostructure into a state of a parasitic system, and of course, with the following mutations, this System can already determine this.

The worst option is when the communication frequencies are shifted so much that they allow you to directly participate in the information exchange of the System - Supersystem, then it is not just the whole program that bursts, but the System is destroyed. Why? When intercepting another message, the biostructure may, for example, not like the text, and it will simply begin using its own communication system to change the System by giving it disinformation and not randomly, rather, obviously with its own purpose, so that the System itself executes it as a program. The worst-case scenario is when the structure has a connection with the Supersystem and you can even calculate the time it will take for the Supersystem to eliminate everything and, first of all, the System itself.

Of course, the system may not be satisfied with the behavior of a biostructure having shifted communication frequencies, but it still needs to be found. And how much harm it can bring, no one can even predict. And which biostructure has these shifted frequencies of a monkey, shark, wolf or human - you can't immediately determine. It is possible, of course, to change the density of the lattice structure of the Subsystem, transferring all structures to a sleep state, and then find out those biostructures that have an unauthorized connection. But a competing System can also do this (find out who can be used and applied in the future).

e) Transmutability;

There are two goals of transmutation processes. The first is to change the properties of the biostructure in order to identify it at the Supersystem level, that is, to check whether the resulting biostructure corresponds to a given program. This is necessary in order to move this biostructure to a new Cosmic body. If, as a result of a double or triple conversion, only 16 octave states remain, then the result for the System will be deplorable - most likely, the

function of its self-destruction will be turned on, as it is not able to independently solve the tasks assigned to it. The second is to check the compliance of the biostructure with such communication parameters that it should have. During transmutation, all extraneous octaves are eliminated, while it is possible to control the process of the appearance of undetected communication octaves. This is extremely important, because it is impossible to allow a biostructure with unaccounted communication octaves to be presented to the Supersystem and further transmuted for the implementation of other programs on a new cosmic body. In this case, the Supersystem may be put at risk. The transmutation process usually begins with more organized biostructures.

4.3. Information protection.

4.3.1. Information protection from external influences.

Outsiders, relative to the current System, will first of all seek to gain access directly or through biostructures and not only to the System, but also to the Supersystem, in order to subordinate them to their programs. There is no problem in destroying foreign objects. The laws of motion are the same and their identification is known. In addition, [all objects not used in the work program are already extraneous](#).

External influence can also be carried out in the Subsystem by forcing biostructures to change communication frequencies. This is achieved by changing the number of layers of the Noosphere and its density, as well as changing the coupling frequencies of the lattices. But this process is very time-consuming and will be immediately noticed. [A more complex process in recognition is information protection at the level of biostructures](#). The very elimination or replacement of the connection is not subject to control and can be detected only in the process of transmutation, which must be carried out periodically without compromising the existence of the System itself.

4.3.2. Information protection against biostructures.

It is extremely important to separate the information coming from the Supersystem from the information that enters the Subsystem. No information about the meaning of the existence of the System, its parameters, communication system, communication protocols, etc., should be available to the Subsystem. If something "leaks" into the Subsystem, then it is not only external Systems that can take advantage of it, but also the biostructures themselves to give their "special unsinkability".

What they are supposed to know later will be given to them when they are moved to the level of the Supersystem. The rest of the information will simply be erased. But if the biostructures have the possibility of their own communication, as already mentioned earlier, this will jeopardize the Supersystem itself. She will be unable to manage and will be liquidated.

Some types of biostructures are also given a brain for certain independent work. This brain must be busy with something. Each genotype has a different brain. One genotype is intended, for example, for management, and the other for protection.

What one is supposed to know, the other is not supposed to know. But they are not all given to know that they are biological "robots" and their state can change at any time under the action of the System.

When working, these "robots" must use the system of metric units that is not able to affect the operation of the System and they are embedded with knowledge that is far from the actual truth. If any other System tries to use such knowledge, then nothing will remain of it after a fairly short time.

It is possible to list many points on which "robots" are provided with misinformation, but here it is indicated that they should not have knowledge that can harm not only the System, but also the Supersystem.

4.3.3 Reaction of Biostructures.

No biostructure can have information without the System. It is possible to pass by information because there is no command to pay attention to it. No external influence can directly or indirectly make a biostructure work in another information field, because that would simply destroy the biostructure. In addition, even if the System itself gives information to the biostructure, it does not mean that the information is fully delivered. Distortions are possible, and this already forces the System to repeatedly duplicate the transmitted information.

As already noted, due to changes in the information field of the biostructures, a number of shifts in communication frequencies have been forced. What was previously strictly secret became available as information, and then as a reaction.

What was found out in connection with changes in the communication frequencies of biostructures? What do they broadcast to other information fields? This is a huge amount of information about the structure of the System and the Supersystem, the properties of the Noosphere, the energy parameters of Cosmic bodies and individual manifestations of these parameters on Earth, about the communication systems of the Supersystem, the System, and Subsystem, the identification of biostructures for their intended purpose, the conditions of their existence, and so on. The locations of objects and complexes of the System, its parameters and capabilities are known. In the last 5 years, biostructures have begun an active offensive against the work program of the old System. To do this, a number of earthquakes, floods, hurricanes were carried out, which erased several control points of the old system, destroying its management structures. It must be assumed that these actions of biostructures are still ignored. [If the biostructures begin to change the System itself, then you can no longer envy it.](#) Some materials have amazing accuracy in parameters that were previously unknown. If these parameters become known (to any other System), then it is safe to say that the Supersystem will fall under the subordination of this new "external" System in a fairly short time. The parameters of the grids of the Noosphere and Space obtained from the old System, allow biostructures to independently select objects and form new living conditions and purify themselves from the old.

4.4. Physical aspects.

Of course, everyone has heard about the existence of Heaven and Hell, and some have even been there and are already preparing themselves for life in Paradise. Fortunately for the thirsty, there is both Heaven and Hell on Earth, they exist, but no one "sees" them. The Church has elevated these concepts to the rank of divine miracles, access to which is provided when certain ritual obligations to the church are fulfilled. However, there is a Heaven in Hell and a

Hell in Paradise. There may be heavenly places in Hell and damned places in Heaven. Paradise is managed, as a rule, by God, who is called by his own name by every nation - Allah, Buddha, etc. The palaces are ruled by Satan and he does not have as many names as God. It is known that there are religious wars, but there are no wars in the name of Satan. God, as we know, created the world around us and all living things. There is also a feedback - only God is worshipped, all the best is considered divine, and all the vices are from Satan. That is, the world is divided in half according to the golden ratio, where most of it belongs to Satan, and the smaller part belongs to God, or, from philosophy, the world lives in a Divine way, and develops on sin. When God wants to punish someone, he takes away their mind, and when Satan wants to commit sin, he gives them an apple.

All this becomes clear when analyzing the place where a person lives. Let's discard all the husks and terminology, and translate everything into an understandable language.

4.5. Initial state.

Man, as a unique creation, was created on Earth. The basis is a living cell, the mystery of whose existence modern science is not able to solve. There are many reasons here, the first is that "horse literacy" is used in science.

A person is a multi-layered object. What we see is ionic (proton) structures or a shirt clad on an antineutron shell containing a neutron base or platform for a neutrino structure (or matrix), which is called a brain.

The solar system generates the entire spectrum of frequencies used by potentials for the existence of everything that was created on Earth. The Earth has active zones -

Hartmann, Curie, X-ray nodes, through which the entire frequency spectrum becomes available anywhere on Earth. The Earth's atmosphere is a multi-layered structure, each layer of which has its own lattice and frequency spectrum. The lower layer of the atmosphere contains more than 100,000 frequencies. Science has reduced the whole combination of frequencies to a single understanding - the gas environment.

The surrounding Space does not have such an abundance of frequencies and moving in Space is possible only inside objects that have such a set and reserve of potentials for all those frequencies that should guarantee all the conditions for maintaining life. The fewer frequencies are transported, the more opportunities UFOs have. Therefore, only the neutrino structure is transported in Space.

The matrix of the neutron structure is described in sufficient detail and it can be indicated that the frequency range 71.1250250 - 95.975975, even with a charge of 1 Volt, is a small Sun in the frequency range 47.45004500 (with a charge of at least 10^{32} Volts).

Before moving, a brain matrix is created, it collapses (the octave increases), is provided by a dispersion generator (UFO) and moves to a structure or System like the Sun, where it unfolds (by analogy of the Trojan horse) in the form of life that is created in the new structure. At the same time, the decrease in the matrix octave should not be lower than the one that is available in the new location. The following example can be given. The turtle lays eggs in the sand. Inside the egg, lymph and a "shirt" or ionic medium are formed. If at this moment the

external support is not 33.5, but 32 octaves, then the size of the turtle will be 1,000 times larger. By analogy, dinosaurs were no bigger than mice on their planet.

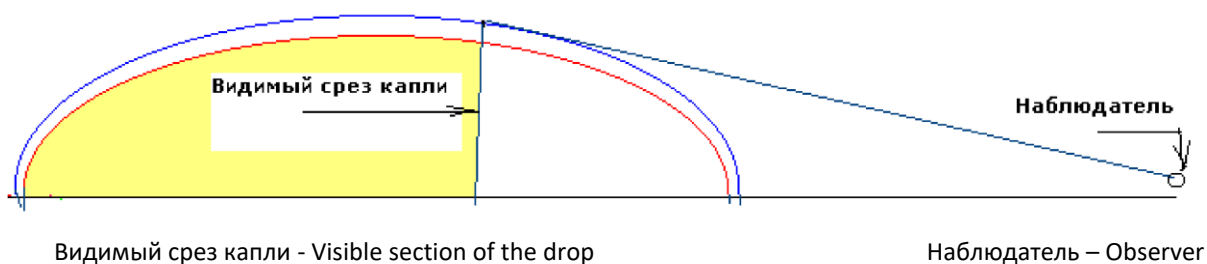

The earth, as it turned out, is an ideal place to live. Everything is here, even water in which you can breed fish and plankton to feed them.

4.6. The formation of paradisiacal corners and zones of hell.

A beautiful rainbow that appears after the rain pleases the eye. But many do not think about the meaning and causality of its occurrence. A rainbow is a shell of a high-frequency drop covering a significant territory, the size of which is determined by the Control System.

There may be several such shells 2 or 3. One of the shells is protective.

It is known that raindrops are larger in spring than in autumn. In addition, during the spring rain, when a raindrop hits the water's surface, a bubble appears.

As it was considered in the works on the Noosphere, we get water from Space, and not by the water cycle in nature. Water is an ionic precipitate of recycled frequencies. In spring, the drops contain high-frequency components that increase the potentials of the Noosphere grid adjacent to the Earth. When the equality of potentials on the Earth's surface and in a falling drop is reached, the latter forms a bubble. If, at the moment of the formation of the water bubble, we fix its slice (see Figure), we will see the elements of the rainbow. But the drop exists for a fraction of a second and the cut of the drop is protected from the outside by an ionic medium. In order to form the necessary potential densities in a given region (in the frequency range of life support or for conducting experiments), the Life Support System does not process the potentials selected from Space, but according to a given program, this processing is carried out over a given territory. In this case, the ion precipitate merges in the form of rain, and a "drop" is formed from the high-frequency components, the slice of which, after removing the ion protection, is visible to the unaided eye. But there is one feature here – the color scheme of rainbows can be different and depends on which zone is formed. This drop hangs for a long time until the Control System indicates the end of the Program.

Sometimes there is an unusual color scheme – a very beautiful coloring, and inside the rainbow to the surface of the Earth - a black field. In this case, the area under the drop receives the entire spectrum of the necessary frequencies. Currently, science is able to determine where the zones of heaven and hell are formed (if it knows the purpose of frequencies), since the well-being of people depends on it.

A drop of rain does not fall on its own. It is known that with a good tan, sometimes blisters form on the skin, and they are quite painful. If a chip is placed inside the blister, it will not function. Similarly, such blisters form on the surface of the Earth, in the case of either a shortage or an excess of the regulatory potentials of water retention frequencies. The size of the blister is about 1,000 meters above the surface of the Earth. If an airplane flies into such a "blister", then all its electronics become a pile of garbage for a few moments, which causes disasters. There may be an effect of signal disappearance, for example, television. In the period from 1995 to 2002, there were cases of complete disappearance of television signals on all channels, while the potential density at the 45.5th octave under the "blister" was less than 32% of the norm. After 1-3 minutes, recovery took place. The same applies to the operation of all electronic devices, including computers.

4.7. Control.

The principle of creating both Heaven and Hell is the same - a "frying pan" is created, bordered by the lower layer of the atmosphere and a "fence" - a ring of pyramids at the nodes of the Hartman zones. The initial formation is a "drop", externally observed as a rainbow. Inside this frying pan (if it is Paradise), it is possible to create ideal conditions for the existence of the matrix. At the same time, others will feel uncomfortable. If this is Hell, then sinners can be fried in a frying pan until they are ruddy.

Given previous experience, it is impossible to conduct an experiment on the entire territory at once (especially when owning a control system). It is easier to create autonomous frying pans - on one to fry sinners, on another to get AIDS, on the third to experiment with livers, and so on. The size of the frying pan does not exceed a few tens of kilometers, but the results are used to correct the program. Hell is created not only for the remaining matrices of the inhabitants of the Earth, but also for those who have lost contact with their object, while extraneous objects are destroyed in the usual way.

Why is it still not possible to combine the matrix with a living cell without losing part of the matrix? The symbiosis of a living cell and radiation frequencies led to the mutation of the cell and the appearance of ligaments in it to retain radiation frequencies. Studies show that a living cell is already radioactive, but this does not mean that all issues have been resolved.

The limits of regulation of radioactive frequency support nodes are different for different types of matrices. If as a percentage, then from 5 to 45%, which is not enough for full control. If you add potentials, the elasticity of the ionic structure decreases and signs of radiation damage appear (X-ray shows darkening). If you reduce it, diabetes mellitus appears. That's why they conduct annual sessions of experiments in Hell.

The concept of Paradise is currently defined as a cap inside which the original mode of existence of matrices is fully maintained without mutation of a living cell, in order to return the matrix to the object without flaws, if necessary.

The concept of Hell is a frying pan for conducting experiments. Two large frying pans are the coast of Crimea and Sochi, and additionally the Rostov and Krasnodar regions. As a rule, experiments are carried out at maximum loads (summer) and no more than 12 days with a

break of 6 days. There are quite a lot of people willing to take part in experiments during this period.

Control systems have autonomous zones that are not affected by changes, as they are protected by their objects that are inaccessible to control systems.

5. Brain matrix of genotypes 42, 44 ("golden billion")

The concept of "matrix" must include the system of program memory of the biostructure.

A person on Earth has not only a memory, but also a set program of actions. If there is no matrix, then a person is a robot and performs what he was given at birth – to live, study, and so on. Such a person reacts to an unexpected change in the external situation only in the way and to what he was taught during his life. The basis of knowledge does not play a role, it can also be academic knowledge based on horse literacy, religious, prison, and so on.

Among people of non-matrix type, the division is carried out into 12 categories according to the state of the brain (12 "tribes" from different sacred legends).

The first category includes people with a trainable brain. The brain has a complete information structure of reading and writing, as well as an adequate response to new information. The 12th category includes people with a brain without a recording system. These are robots, they have a program set from birth, they cannot be given anything that goes beyond their program. The external sign is "tin" eyes and no perception of information. They can repeat the phrase about the existence of life on Mars a hundred times, but it will not be perceived, because this type does not have a Mars filter. This type includes serial killers who work out the program on assignment. The task is given by matrix types of people.

5.1 The origin of the matrix type of people.

The matrix type was created during the creation of humans.

The matrix type includes people standing at the top of a hierarchical pyramid. When creating a matrix type person, the biological structure (shirt) has additional frequencies, the use of which allows the Control System not only to control, but also to correct, record and replace. This also includes reincarnation (an old matrix is put on a new shirt). In the case of sudden death (by the type of execution of the royal family), a suitable DNA structure is found for the matrix during the cycle and the matrix is "seated" on a new structure (Anastasia).

5.1.1 Purpose of Matrices.

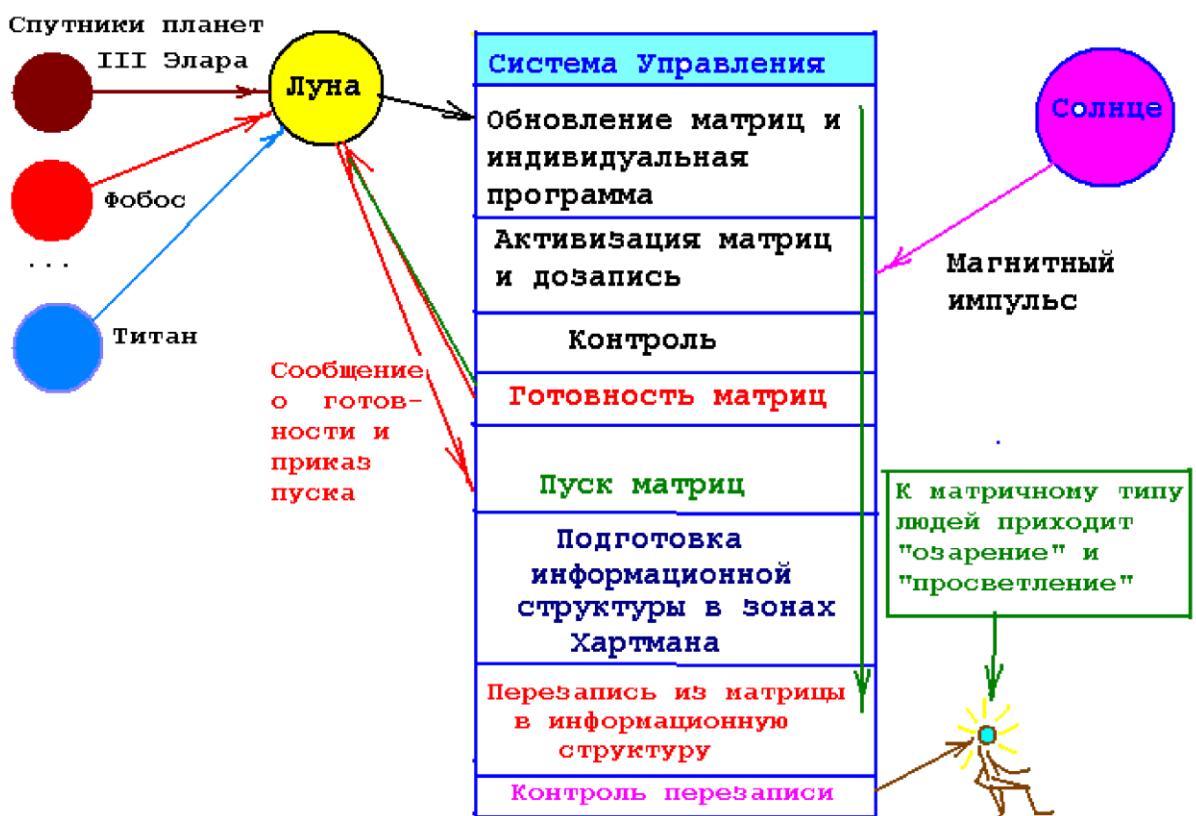

The human brain must exist and not depend on changes in external conditions. As it develops, the brain must receive new information and use it. If this were not the case, the development of a "civilized" society would depend only on the length of human life. Example. The development of the next generations of computers does not take 100 years, but a few months, with successive replacements. This does not mean that different biostructures received information about different types of computers and started making them in due time. But if the first stage had failed, the second one might not have been necessary.

In this case, the fully recorded circuitry is corrected by the Control System as it is made and used.

The development of the brain with the use of matrixes goes according to the program, which is carried out by the Control System.

5.2 Matrix storage.

Consider the scheme of obtaining and maintaining matrices on Earth.

Left Side:

Спутники планет III Элара – III Satellites of the planet Elara

Луна - Moon

Фобос - Phobos

Титан - Titan

Сообщение о готовности и приказ пуска – Readiness message and launch order

Center:

Система Управления – Control System

обновление матриц и индивидуальная программа - matrix update and individual program

активизация матриц и дозапись - matrix activation and re-recording

Контроль - Control

Готовность матриц – Matrix Readiness

Пуск матриц – Starting the matrices

Подготовка информационной струк в зонах Хартмана - Preparation of information structures in Hartman zones

Перезапись из матрицы в информационную структуру - Rewriting from the matrix to the information structure

Контроль перезаписи - Overwriting control

Right Side:

oСолнце – Sun

Магнитный импульс – Magnetic pulse

К матричному типу людей приходит “озарение” и “просветление” - “Insight” and “enlightenment” come to the matrix type of people

When rewriting is controlled, the Control Complex transfers the information structure from the Hartman zones to the atmosphere for general reading.

What is the role of the satellites of the planets?

Each satellite updates the Program according to which the Control System operates at a certain clock interval.

III Elara - Weapons Development Program.

Phobos - a program of warfare and its methods of warfare (weapons, economy, and so on).

Titan - a knowledge system for the duration of the Program.

The remaining satellites provide information that corrects the Program performed by the Control System on ecology, celestial mechanics, the development of biostructures and a living cell.

The matrices are stored in the Control System Structure (Tibet, Kailas). The appearance is a clot or ball lightning with a set of more than 17 thousand frequencies, combined with a clock frequency of 64 octaves. Groups of matrices of the same type are stored in a separate "chest". After starting the matrices, the reaction of the matrix structure is checked with the contents of the chest, while the elements of the biostructure shirt can be changed, up to the replacement of the shirt itself.

The shelf life of the matrix is unlimited and depends only on karma, that is, the scattering time of the carrier frequency in the absence of recharge. Subsequent diagnostics of the biostructure is performed using a reference matrix.

5.2.1 Properties.

Each node of the matrix contains 33 frequencies plus the frequency of communication with the matrix lattice. Each node of the matrix is an information structure with certain properties, activated at the time of launch. This means that a person could have been a musician, but then the killer's structure was activated and he became one. The matrix contains language translators and a person may suddenly "remember" that he knew Chinese. Language translators (usually one or two) are given to a non-matrix type of people from birth, and if you are asked to learn another language, then you will always find a reason not to do it or you can study it your whole life and never learn the language.

5.2.2 Management.

The matrix type of people and their actions are constantly under the supervision of the Control System, as well the actions of the environment of these people are corrected by the Control System. The reaction of the Control System is 0.1 s.

Each new matrix update cycle is accompanied, first of all, by ensuring the safety of the biostructure and only after that a new actuator is activated.

5.2.3 Updating matrices.

Updating matrices is a complex process coordinated with all performers: the Moon, the Sun, the satellites of the planets and the Control System. Everything is subject to a common program. In 2000, the 500 – year program advertised by Nostradamus was completed (he recorded what he was allowed to divulge). The goal of the Program has been achieved and it is

fully completed. The period 2000-2008 is a transitional period and the download of a new program, according to which information is received into the Control System, both from satellites and from the Moon. According to this information, all matrices are withdrawn and updated. Whether there is a biostructure for the matrix does not matter. If the biostructure was and no longer meets the requirements of the program, it is destroyed and a new one is created. Updates are performed sequentially, in groups. After checking the new group, the old one is subject to destruction, while no check is performed on the biostructure. So, if an operation was performed on the biostructure at this time (and even something was removed), then the identification sign will be lost during control and the biostructure will be transformed into a robot. When forming a new matrix, the cyclic sequence of actions is monitored.

For example, when you see a tram, you need to enter it, take a ticket, get to the desired stop and get off. The number of behaviors is many, but they are all interconnected in cyclic sequences. In people of non-matrix type, these functions may be disrupted and no longer recover. In the matrix type, the restoration of impaired functions occurs after each 7-day control.

The traveling salesman problem is solved on the matrix during the update period, while the node traversal sequences are set and the cyclicity is checked.

The number of nodes can be more than 1,000 (solved only by the Kaleidoscope algorithm). Modern mathematics cannot solve this problem. The transition functions are designed so that, when traversing, the albedo is equal to 0 and the decrease in potential density does not exceed 2%.

Medicine "knows" everything about the structure of the human brain, about the structure of DNA and RNA, therefore it makes no sense to repeat the truths that civilized humanity has learned with a scalpel in its hands. It is known that DNA is related to a specific individual, and even hundreds of years after death, it is possible, by examining DNA, to "determine" the average salary and attendance of pubs.

There are, of course, hidden possibilities of DNA (no more than 5%), but they do not interfere with scientists. The invention of new scalpels will help solve any problems that arise in the study of DNA. There are 2 DNA helices and, as is customary among sailors, they are needed for strength. DNA can be viewed through an electron microscope. All amino acids that are formed by combining DNA codons are known. A separate issue is DNA. DNA is a structure that stores all the necessary information on the matrix.

DNA is a double helix; the helix step corresponds to a frequency value with a value of $p = 6$. This step fits exactly into the structure of the atmosphere, in which the light wave has the same value of p (on Mars, this value is different). Science knows the concept of "codon" (A, C, G, T). It is known that they are the basis for the formation of 20 amino acids, but DNA itself is also an acid (by name), and acid is a structure in which some kind of development takes place. Example – a woman has an acidic environment in which the fetus grows. Therefore, the information received for development is first monitored (whether it got there), and then the conditions for its implementation are formed. The DNA helix is double (left and right), which exactly corresponds to the principle of forming a communication system built on primes, the

base prime number is an incoming (left-spiral), the adjacent prime number is right-spiral, designed to release spent information and eliminate unnecessary receipts. If there was only one helix, DNA would turn into a recyclable warehouse.

Codons are nodes relative to which information blocks are formed.

DNA - Deoxyribonucleic Acid (RNA - Ribonucleic Acid).

With the DNA of a gene, information is transmitted by informational RNA (matrix RNA).

Consideration of options leads to the exact value of the necessary codons for each genotype.

Structure of the benzene ring:

The main structure is a cube, but the number of connections is at least 3, therefore it is necessary to consider only those permutations of codons that have a 3-variant assembly (there are 58 of them). All types of DNA existence in a cubic structure have a limited lifetime:

1. The input of new data without control, without output and without the organization of input-output, leads to the rupture of the cell from saturation at the first input.
2. The presence of only one withdrawal is the expenditure of stocks.
3. Having only control is an economical use of stocks.
4. The presence of only the I/O organization is the release of everything that is in the cell.
5. The rest is clear when considering the table.

The dodecahedral structure has all 4 nodes, since there is a combination with an icosahedron, which provides a full exchange under any exchange schemes.

6. Software management.

The software control of the brain genotypes created by the System, of both the "golden billion" and the rest of the Earth's population, is produced by the Complexes of the Earth and the Moon. The Earth and the system of planets were created over tens of billions of years.

The attack on the Earth system with its planets (the entire "Parade of Planets") was committed 18,337 BCE. Having overcome the system of protective complexes of our planet, that was available at that time, an interventionist group arrived, consisting of 274 planets with 6,945 objects in service, including 16 type 960 (as the most advanced and universal). The planet Phaeton (from the Earth system) took the brunt of the blow, having such a defensive capability and power, and destroyed most of the attackers, but was captured on 9 May. On the same day, she blew herself up along with all the objects that managed to capture her and were on her. As a result, the planet Phaeton eliminated 3,624 objects, destroyed 2 Moons, 423 satellites and 15 objects of type 960.

The remaining planets and enemy objects (interventionist objects) rushed to Earth, which did not have sufficient protection and was captured 16,300 BCE. All brain life support structures on Earth were destroyed, and the brain lost potentials to the level of 3%, which later, in a short time, led to the elimination of all inhabitants of the planet. After Phaeton and Earth, the interventionists destroyed everything on Mars, and turned off the life support systems on the rest of the planets (the "parade of Planets"), leaving only escorts. Upon completion of the specified capture of the planets, the interventionists formed a system of satellites around each planet and began to change their surrounding structures. So, for some, the beloved Moon and Sun are not ours, not native (there are materials on their structure and arrangement, there is no need to organize flights to them).

Control Complexes were formed at different times to fulfill the following, for these purposes:

- The Main Control and Management Complex "Caucasus" (genotype 42, "Golden billion");
- The Main Control and Management Complex "Alps" (genotype 44, "Golden Million");
- The Main Control and Management Complex "California" (preparation of genotype 46).

In addition to these, there are a certain number of complexes and systems that control all the processes of forming life support conditions and maintenance, control over the execution of people's actions according to their prescribed functions, provided for by the program, and much more.

The very first of the Caucasus Complex, the Ararat Complex, was formed, covering the management of the territories of Asia Minor and Greece. Having worked on it a certain amount of people with the brain genotype 42, having tested possible and acceptable options, corresponding to that time, the Kazbek Complex was formed and installed, covering the

territories of the eastern and southern Caucasus, Central Asia and the east of Asia Minor. The last, more advanced in management and with other functional indicators for individuals with brain genotype 42, was the Elbrus Complex, the control zone of which is the European part of Russia, the zone of Belarus, Ukraine and Bulgaria. Currently, all three Caucasus Complexes execute software processes for managing the actions of people of brain genotype 42, including the execution of processes in the new program.

After achieving sufficient results in the development of this genotype, the process programmatically moved on to the development of people of the next brain genotype - 44.

Similarly, the development of people of brain genotype 44 and their programmatic actions are controlled by the Main Control and Management Complex of the Alps, which has two territorial complexes. Alps 1 is a territorial management complex in the territories of France, Spain, Portugal, Italy, and Western Europe. Alps 2 is a territorial management complex in the territories of Eastern Europe, Germany, the Baltic States, and Scandinavia.

Additionally, a complex has been formed for the preparation and management of people with a new brain genotype 46 - the California Complex, whose management functions commence in 2012.

The landing of the interventionists took place 16,300 BCE. First of all, the interventionists formed paradisiacal places for their existence, all the true Complexes of the Earth that they discovered were destroyed, along with everyone who was there. Before the attack, the Earth managed to turn off some of the Complexes and hide them. The population was completely destroyed, and all humans were captured.

For 12,400 years, the interventionists made several attempts to create people from spiders and took the essential and structural foundation of their living protein as a basis. But the level of ignorance about the secrets of the living cell of the Earth kept them from positive results, so everything ended in failure, and the skeletons of various terrible creatures, like their experiments, are still being found. Eventually, all this led to the fact that human beings began to be used, inserting spider brain frequencies into them, limiting and simplifying the capabilities of the human brain to the level of the interventionists. Consistent frequency setting led, in their opinion, to their desired goals, i.e., to positive results. They managed to combine the spider brain of the interventionists with the brain of a humanoid human, limiting and rearranging the functions of the latter for their Control Systems, while simultaneously creating and improving the latter. During materialization, i.e., when translating the product, they received into a state of lower octaves (translation into 31 octaves of the material world), all humanoids received the brain of spiders. Thus, it was possible to form the current "civilization" (with great chagrin for Darwin and his supporters, i.e., without his beloved monkey friends).

Further, many more short-term programming processes were carried out with the received people in order to bring his materialized external image to the maximum object identity with the image of a humanoid human, i.e., to bring it closer to the appearance that a Human had before the intervention of the Earth.

By mid-September, 5,770 years ago (relative to 2009), this process of their figurative similarity and other fragments of perfection was completed (meaning the whole tale "about the image and likeness" and other legends on any scale of creation).

Prior to the completion of this process, all management, at the level of Conceptual Power, was relatively primitive, knowledge of the surrounding world was mainly built for people on a figurative basis, everything was presented to them from the outside in an extremely simplified format. For this reason, this period is not of particular interest from the point of view of studying the Essence of Conceptual Power.

Subsequently, i.e., since the year 0, the interventionists began to introduce a large group of derived energy frequencies, formed by them (relative to the base ones they imported) and improve the Control System itself. The Interventionists improved the complicated Control System that was created on Earth by them. Control was introduced on the condition, performance behavior and control on the qualitatively resultant aspects of groups and on individuals of people. An extremely important step was the introduction of the reincarnation program. This was the only way out of a difficult situation for the entire Ebrov System, which failed to solve the problem of the discrepancy between the long duration and continuity of the necessary executive functions of people, with a limited life span. They failed to get close to the fourth DNA codon and mastered only three of them, and that's why life for the people they created is so limited in time. So, the "comrades" from Judea do not need to worry, their merits in the introduction of a new chronology from the year 0, do not exist. Externally, it was not only them who were not asked, but all other people were not asked and the calendar was forced to be kept by all of them.

Subsequently, the interventionist (Ebrov) program goals regarding humans have become significantly more complex. They aspired to get humans as representatives from their Cosmos (because humans look significantly more decent and potentially more perfect), but possessing a spider's brain and the ability to switch to the 44th and 56th octave energies (i.e., above 31 octaves of the material world) in case of unforeseen emergency situations on Earth. Besides, the highest elite of the group of spiders, numbering 1,200,000 individuals, which were located on the Sun, should, according to their program, make up a "golden elite" on the Earth, but with a brain already more perfect – 72nd octave.

This is the program goal aspiration for their full embodiment of "reign" on Earth for the rest of the period before arriving at the planet Sur. The completion of all the preparatory complex processes for the beginning of the active phase of this program should have ended in 2000. It is not at all strange and not by chance, but for some reason this year the Mayan calendar and all the predictions of Nostradamus, who simply broadcast and voiced the programs of spiders, i.e., personified the phenomenon of Essence (Conceptual Power), should have ended. But!!!!!!

As of today, i.e., 2009.11.15, the functioning of the main Complexes and Systems of the invaders have been destroyed, along with all those who served them, i.e., the spiders and those attracted by them. It took the hardest 16 years. The consequences of the intervention are still many, but the main, basic and irreversible thing has been accomplished!

A part of intervention complexes and objects is left as an active trophy because losses in time and spent energies must be compensated by something. In the near future they can be used in the solution of creative tasks and the elimination of the consequences of the intervention.

And, in this connection, permitted and allowed, in a simplified format, to show how Control was technically performed by their Systems, but to illuminate this control on the states of people and their subsequent resultant behavior.

This is the most sacred "From the Outside", painted with epics and an extensive number of legends. Technical and technological subtleties are omitted.

Of all the Complexes and Objects involved in the management of the old System, we note only the main part, without which control would not be possible:

№	Complex	Purpose
1	Chekhov	Control room, main control complex, task, Programs for all complexes
2	Kailas	Main control complex, correction in accordance with the atmosphere's brain program for all genotypes on Earth.
3	China, Tibet	Monitoring of the state of the atmosphere when correcting the brain of the atmosphere and all communication channels of objects of type 560, 520, 500, 440, 960
4	Ural	Brain shell (31st octave) for all genotypes (from unicellular to human)
5	Baikal	Emergency rescue system for humanoids 42, 44 in case of disaster (evacuation from Earth)
6	Easter	Control of the correspondence of the brain shell and for all genotypes from octaves 49 to 59
7	Kailas 2	Current (weekly) brain monitoring
8	Peru	Main complex of management, maintenance and storage of humanoids (for future use)
9	Andes	Control of all humanoids on Earth
10	Caucasus	Main complex of control and management of the "golden billion" - genotype 42
11	Elbrus	Territorial complex – European part of Russia, Belarus, Ukraine, Bulgaria - complete management of genotype 42
12	Kazbek	Territorial complex - complete management of genotype 42 - Eastern and Southern Caucasus, Middle Asia, East of Asia Minor

13	Ararat	Territorial (the first on Earth) complex - Asia Minor, Greece – complete management of genotype 42
14	Alps	Main complex of control and management of the "golden million" - genotype 44
15	Alps 1	Territorial complex - France, Spain, Portugal, Italy, Western Europe - complete management of genotype 44
16	Alps 2	Territorial complex - Eastern Europe, Germany, the Baltic States, Scandinavia - complete management of genotype 44
17	Sarajevo	Main energy complex of octave 53.5 (recharge of grids for all types of radiation). The first atomic bomb was developed in Germany.
18	California	Main complex for the preparation of a new genotype – 46 (introduction 2012).
19	China, Tibet	Main control complex on Earth, setting standards for all complexes
20	Easter	Control Coordination Node via Kailas
21	Moscow 960	Main object of the Control System, all brain matrices 42, 44, 46 and Moshiach.
22	Greenland	Control of the atmosphere's brain
23	Irish	Computer center. All types of calculations. By the way, Ireland is the 2 nd place in the world in computer programming. At the same time, Ireland is the birthplace of the emergence of unsolvable mathematical problems.

It is enough to pay attention to the purpose of the Complexes and this sufficiency is quite convincingly demonstrated by the fact that the support of all actions in the management of the execution processes by the old System, did not leave to chance, even in minor episodes of actions and events. A skeptical look or condemnation of what has been said will only mean unwillingness or inability to delve into the depth of judgments about it. Technically, from the first steps of the origin of any program process, even when forming a Goal Vector, to its practical implementation through performers, everything was under the effective attention of Control Systems. Moreover, the old System had the technical ability to both lead and to force the planned results in everything that was determined by the framework of their various established programs.

CHAPTER 2. Conceptual basis of the economy in the formation of Humanity of the future.

INTRODUCTION

There are countless judgments about the meaning of people's lives, the historical and other causalities of the formation of states and their international hierarchy, explanations and justifications for the direction and regulation of the pace of development of societies, their construction and all areas of economic management, separate or conciliar coexistence, what is the main purpose of people on Earth, what is the meaning of life and Really, people were worried about it, and the worries were, in the opinion of the authors, quite justified. But were they profoundly true?

These judgments are embodied in the works of various scientific research and directions, reflected in classical scientific and various other literature, even fiction and encyclopedic. In a word, this set of issues has not deprived of attention. Many contradictions or consolidated opinions, rigid positional beliefs, religious beliefs of a consonant or mutually rejected plan - all this had its own well-founded concept in the course of each historical period. For us, this is of some interest, but no more than archival "excavations". "Paper sticks and stones", as artifacts, are games in the "past". But this hour is just a game and nothing more. We do not aim to consider the nature of the change and perfection of such concepts during the stages of historical development.

The whole meaning of these judgments is of interest more to the monotonously closed secular level about the sad past, because they are limited to the surface and are more linguistic in nature, as a linguistic transfer rivalry and are significant for the future as much as the meaning of all the senseless hot traditional disputes "concerning half a glass of water". The main thing is that the glass doesn't care.

All the causes and regularities considered and agreed upon in the present secular world are consequential, not profound. There is nothing offensive or insulting about this to the thinkers and researchers of the past. To date, there has been no answer to the question - for what true reason did people assemble into societies, how and for what true reason were states previously formed and their boundaries defined, beyond the opinions of Darwin, his followers and the entire former assortment of political upstarts? How were ethnic groups formed, what role did nationalities play in the essence of a unified process of civilization, and was it unified? Why do people speak different languages and how many of them are there in reality? What is the "recipe" of numerical, national and other characters in the formation of each society, is it universal for all societies or is it unique for each society? How do we build the society of the future on the basis of the ashes and ruins left behind, formed by the complex and active impact of all the "achievements" and target aspirations of the current civilization? And, finally, who will be left to build the society of the future?

In fact, there still were no answers to them, since they were not posed in such a form. Not only were people not allowed to ask questions in such a form and for such a purpose, but

they were not allowed to reason in such a way. This was primarily counteracted by the old System in its Program through the most complicated structure of Conceptual Power. It basically and most importantly provided an "image-behavioral" form of existence of people who were in a purely "object-applied" state of their passive being and, accordingly, had extremely limited "free" reasoning framework, the dimensionality of no more than a small step-by-step solution on a scale, no more than was determined by the Goal Vector of an individual or conciliar character.

But, all these figuratively-behavioral and subjectively applied states of being of people were investigative. And are there any other primary determining reasons, the basis of which is based on a more influential influence? How and in what way could the energy information system, created by the interventionists, influence the peculiarities of the formation of societies and everything related to it over the past 18,000 years with its active artificial state? How did it ensure, accompany and control the full target program harmony, including in the biosphere, of all the octave energies introduced and derived from them, created on their, i.e., someone else's fundamental basis for the formation of spaces (cubic)?

It is extremely important to gain awareness and understanding of the true essence of the above-stated aspect of the issues. Since the manifestation of the answers to the requested causality of the past states of societies throughout all historical stages of their development, will allow us not to make mistakes in the formation and existence of Humanity in the future. This importance, in turn, will determine the exclusion of uncertain steps and incorrect decisions in the textural participation in the formation of the Goal Vector for the transition period in future phenomena, actions and events allowed by the System. Since the System missed such participation, it also means permissiveness in judgments in this direction.

As part of our research, it is of interest for us, in the final goal, to limit ourselves to only the true role of the economy and its functions in society in the past. On the basis of these studies, as well as in the context of the requirements and strategies of the new Program, conceptually to give the basic definitions of the general model, reinforcing the economy in the formation of Humanity of the future.

2.1. The true hidden causes of the formation of societies and states.

The current circumstances allow us, as an alternative to established dogmas, previously hidden from people, to inform you about the true causal basis for the formation of societies, and later states. In Chapter 1, it was already considered how the interventionist System dealt with a human being after the seizure of the Earth and what followed.

The atmosphere, as the environment of human existence, was formed together with the Earth. After intervention, in its structure by the interventionist System, it is currently represented in 6 layers:

No	From	To	Destination
1	-4,400	-2,200	Atmospheric brain communication grid, atmospheric brain
2	-2,200	0	Atmospheric control system (-2,200 m - hydrophone depth)
3	0	1,200	Base layer
4	1,200	6,200	Accumulation layer
5	6,200	12,400	Materialization layer
6	12,400	36,400	Atmosphere protection layer

The base layer has the entire set of frequencies necessary for the existence of present humanity.

In the accumulation layer, the process of accumulating or removing frequencies is carried out weekly with their subsequent distribution among the other layers.

In the materialization layer, all types of humanoids are transferred to material structures (putting shirts on them), as well as the materialization of UFO objects after their lifting, if necessary.

Each layer, except No. 3, has sublayers in which different frequency structures work to perform the same function.

In the initial period, each object from which the humanoids were obtained, formed an individual "tent" for them, inside which the development of this group took place under the control of the object without reference to the habitat. It was impossible to go outside the "tent", outsiders were not allowed into the tent.

When the Earth Control System was put into a state of new functioning, built for itself, the binding of all biostructures to the local habitat within a certain distance from the Object, began. First of all, this environment was formed by the Andes Complex, then by the Caucasus, and since the year 0, by the Alps. The colony of humanoids living in the "tent" of the object should be called an "ethnic group", in the future it can be called a nationality. Where did the ethnic groups come from?

In the original form, all the "passengers" on all the objects had a perfectly identical appearance and the same brain structures. But objects do not transport material bodies, and therefore, when landing in a "chair", any material structure collapses into a small ball lightning, the size of a match head. Even during convolution, there may be slight distortions. Therefore, the potentials of the brain before convolution could be different.

On the way, the Object could have flown through a meteorite and picked up all sorts of nastiness in the form of those microbes that modern science usually detects on meteorites. In addition, the parameters of the environment, from where the Object arrived, and the parameters of the places of delivery of the "passengers" may differ in structure and stuffing (on Earth there was more oxygen). If the original brain loses at least one frequency while moving, and the Object's generators do not notice it, then many initial properties are lost and, when delivered to the place, the missing properties are replenished from the warehouse of spare

parts (with an expired storage time, since moving took more than one hundred years). Therefore, each Object brought what was loaded into it, but poorly packaged.

Each ethnic group had the same organ structures, but different brain structures. The brain or properties of biostructures, as a system of external and internal control, memory, orientation, properties of information exchange, were also basically the same, but differed in the base. The base was the individual properties of the ethnic group in relation to which the exchange processes of reception and transmission of information or language translation were built.

In the territory of Georgia, for example, the base element is manganese (Ossetians have a different base element, it is a different ethnic group). When almost all the manganese was taken out of the deposits in Georgia, the processes of "thickening" of the blood and growth of pressure in the small circle of blood circulation began in the population. Actually, it was noticed in 1989.

Before the new era, approximately 3,500 years ago, the control system, in accordance with the location of the "tents", began to link them to the atmosphere layer No. 2. First of all, using the features of the brain construction of ethnic groups, each received a basic radiation frequency, relative to which the tuning reformation of the atmospheric layer No. 2 took place. The number of radiation frequencies is more than 100.

Using the base, i.e., the radiation frequency for each specific ethnic group, their number and the number in each ethnic group was brought to a Programmed preset value, primary lifestyles (culture) and the boundaries of the habitat of this group were introduced and acquired with reference to atmospheric layer No. 2. The boundaries of the habitat no longer had a spherical shape. In the center of the former shape, the "capitals" of ethnic groups were created. Regarding this, the construction of further settlements began, etc.

As it developed, in order to stabilize management in the execution of Program processes, restrictions were introduced within each ethnic group that did not allow different ethnic groups to merge, i.e., mix. This was framed by an imaginative and behavioral introduction (concept and awareness) of various traditions, beliefs, etc.

If a group did not meet the conditions of the Program requirements, i.e., had extra-program deviations in its development of an irreversible nature, then it was destroyed, usually with the help of other ethnic groups. But each group had its own object of protection, and if the group was destroyed, then the object was destroyed, it was transferred to a non-working state.

The main Program goal was to create a "Golden million" on the basis of the "Children of the Sun", and all ethnic groups were to be used only as consumables, on which Program experiments were carried out to improve and bring the brain to the genotype required by their program and in the right amount.

The intermediate group of the "golden billion" began to form from the year 0 of the New Era. At that time, the representatives of this group already had a certain connection with the atmospheric brain, located in the layer at a depth of -4,400 to -2,200 m. They could have up to 12 language translators on the brain for communication with other ethnic groups, they began to receive primary necessary information for "creation" and "introduction" of new

technical means, improving their social arrangement, formation of their societies and their management structures, development of primitive, but their own systems of management, etc. Societies began to appear, to form and improve, states began to be formed and everything went as it seems, as historians try to show us in pictures. But not everything is as simple as we would like it to be!

Neither through the Marxist-Leninist basis of fundamental production relations, nor through the theory of the World Market, nor through any other modern theories or speculations from the past, has it been possible to answer the question of how the multiple composition of societies is formed. According to what qualitative and quantitative "special recipe", how many and what groups of ethnic groups should be recruited, within what quantitative and qualitative limits to a full society, is this process controlled or subject to spontaneous formation, why do demographic problems periodically arise? Is the recipe for the formation of all societies the same or is it unique for each separately? And finally, who determines the borders of states, without any military disputes or interventions, i.e., in a different way? The questions are extremely numerous, but they tried to circumvent or look for convenient, outside-truth explanations.

The point is that after the processes of creating a unified grid of the Earth's atmosphere, modified according to its programs, there was no need for a rigid attachment of ethnic groups to a particular location, as the atmospheric grid itself acquired all the necessary properties to accompany the existence of the entire diversity of ethnic groups, anywhere on Earth. From this moment on, a restraining force from the chaos and mixing of ethnic groups (nationalities) as pre-established societies, became the private program functions acquired by the societies and assigned to them for execution, which in accordance with their Purpose Vector of future phenomena, actions and events, predetermined the whole programmatic order of subsequent events in this society. This will be further called as the historical stages of development of civilizations, states and their groups, etc.

In relation to the locations of the Objects and Complexes, the relatively established and well-organized system of energy and information support, communication and control systems, etc., the System carried out a program distribution and assignment of specific functions to each society in advance. At the same time, clear characteristic territorial delineations were defined for the assigned functions of societies. Moreover, each territory of a future settlement was saturated with a certain set of "natural" resources and their formation to such volumes that, to a sufficient extent, should ensure the formation of material goods and services to that exact area and such a society that will be located on this or that territory, having a set of specific assigned program functions. The main geographical reference points in determining the borders between states, were both the complexes and objects themselves, and the frequency binding through the brain of specific genotypes, with the frequencies of specific chemical elements that were present in the deposits of the territory. Such frequency binding, first of all, was the secret recipe for the selection of precisely such numerous or homogeneous types of ethnic groups in society, which was necessary to fulfill the full function of each society. At each individual stage of the program execution of its functions, society can and should have a certain

number of performers of specific brain genotypes. This determined the quantitative composition of society, the corresponding demographic change tied to a certain stage of program execution. Any artificially introduced non-programmatic intervention in solving the demographic problem will not be able to solve it. At the same time, any forms, methods and aspirations in all attempts made will be in vain. But they will definitely be able to organize trouble. So, a future and very serious problem for Russia is artificially organized, connected with an ill-conceived initiative to activate migration flows from Central Asian countries.

Any intervention initiative on the part of random performers, not provided for by the program framework, has always led to some influential consequences. Thus, more than 95% of the people involved in the extracurricular raising of Virgin Lands immediately scattered across the country at the end of this artificially inflated farce, did not solve the intended goal. But, the main part of those who "ran away" did not return to their former places and to the previous way of life. Most of them were originally plucked from the countryside. This was how the first powerful wave of "wandering jack-of-all-trades" was organized, which later became known as the "urban limit" and caused irreparable damage to the development of the agricultural sector of the economy. These were people with a broken program in their head and deprived of the previous frequency binding. The same thing happened with the group of "Bamovites", etc. An alternative example is the voluntary forced relocation of oilfield specialists from Azerbaijan to the Tyumen oil production areas. They, having a link in brain frequencies to oil, feel great in the regions of the north, successfully conduct labor activities and do not intend to move to their former homeland.

A legitimate question may arise, but why did so many bloody wars take place in defense of their territories, are these all-unnecessary losses and unnecessary human grief? We can reassure you – so, unfortunately, within the framework of the old program, one of the variants of the process of eliminating unnecessary brain genotypes was carried out after the next stage of its improvement. This has already been mentioned in chapter 1.

We were allowed to reveal the true reasons for the formation of societies and states under the conditions of the old Program, simply because under the conditions of the new Program, the process of formation of Humanity will be based on a different foundation, but during the transition period, the former conditions must certainly be taken into account in their true state.

The currently existing "golden million" is expendable and after the completion of the Program section, it will be transferred to the "golden billion", on a general basis with the destruction of all those whose brain genotype will not meet the new Program requirements. Actually, the new "golden million" are the "Children of the Sun", that is, related to the materialization of humanoids that have been stored for more than 18,000 years. They will be dressed in "shirts", that is, in material structures that are fully compatible and meet all the requirements of the Program. Completion of this process is in 2020. In order to control Software processes in the world society, from 2009-12-25, the frequencies of the brain of Moshiaich are switched on. All control functions are carried out by activating the new structure of Conceptual Power and its new Performers. Compliance with all forms and directions in the

development of society according to Program requirements and conditions will be monitored. The first thing that will be introduced is the control of finances (the creation of a control and Review Department within a month), the abolition of rent, and the elimination of ethnic groups living only at the expense of rent.

2.2. Harmony of Man, harmony of Society.

At all times of his existence, man has been tormented and plagued by the same question: what does He live for and what is his role in the overall structure of the universe? He has not yet found an answer to this question. And he was not supposed to have found it in the conditions in which he found himself, not of his own free will and desire. Human development took place through trial and error, through many false theories and principles. At the same time, the best minds put forward unique but underestimated development principles that could only be implemented in the future.

As already mentioned, Humanity has entered a fundamentally new phase of its development. Its mission is determined from above and all its activities are managed and directed by the System through the definition of new programs.

One of the undeservedly forgotten principles is the principle of Harmony. It is this principle of development that should be laid down at the present stage of human life. Harmony (Greek. harmonia - connection, harmony, proportionality), proportionality of parts and the whole, merging of various components of an object into a single organic whole. In harmony, the inner orderliness and measure of being are revealed externally. In the second sense, the concept of Harmony in the ancient world was introduced and is still valid in the musical sphere to denote the simultaneous sounding of several tones.

In ancient Greek philosophy, Harmony meant the organization of the universe, the Cosmos opposing chaos. The Pythagoreans' Harmony follows from the central concept of a number for them, as a synthesis of the limit and the infinite; the cosmos, according to their teaching, is a series of concentrically arranged spheres around the Earth, the distance between which corresponds to the numerical ratios of the musical octave.

Heraclitus deepened the concept of Harmony, interpreting it as a unity of opposites. In Heraclitus, harmony is not an external union, but its internal unity.

The Pythagorean doctrine of the harmony of the Cosmos was developed by Plato. In addition, he gave the concept of harmony as a social, moral meaning: Harmony as a set of virtues of a human citizen, manifested in his physical appearance, actions, speeches and works created by him.

Aristotle considered Harmony as the unity and completeness of the whole, as unity in diversity.

The Renaissance put forward the ideal of a harmoniously developed man, who became the banner of humanism.

According to Leonardo da Vinci, "... harmony develops no differently than the general contour embraces individual members, human beauty is generated from it."

In the XVIII century, the concept of Harmony was developed by metaphysical rationalists.

G. Leibniz developed the doctrine of "pre-established" harmony, arguing that all monads correspond to each other and this correspondence is established by God.

Kant, having transferred the source of Harmony to the human subject, understood harmony, first of all, as a consistency between reason and sensuality.

The detailed theory of Harmony was given by Hegel. Harmony is a ratio of qualitative differences taken in their totality and arising from the essence of the thing itself.

In the XIX century, especially with Fourier, who depicted in detail the future ideal society as a "harmony system".

In its understanding of Harmony as a form of expression of the ideal, Marxist-Leninist aesthetics proceeds from the fact that the antagonistic contradictions of bourgeois society can be overcome through a socialist revolution and the construction of communism – a non-antagonistic society that ensures the free and harmonious development of man. Denying the normative interpretation of Harmony as the external coherence of parts, the absence of conflicts, Soviet aesthetics understands Harmony as a reflection in art of the unity of opposites and the laws of the development of reality (The Great Soviet Encyclopedia. Third edition, M., ed. "Soviet Encyclopedia", vol. 6, p. 128, 1971).

It follows from the above review that the original concept of Harmony was gradually transformed into an expansive interpretation in mathematics (harmonic proportion, harmonic analysis, harmonic series, etc.). At the same time, in relation to man, the concept of Harmony has narrowed over time. As an example, we can cite "Miss beauties", which a significant part of the female society wants to be like. A typical example for the male part is "bodybuilders". These images are advertised as ideals of harmony of the human body.

So, what kind of Harmony can we talk about in relation to a human being? The question is absolutely not an idle one, since the correct representation of this concept determines the choice of the general strategy of behavior and development of all Mankind.

Firstly, we are talking about the inner harmony of an individual, especially a Man of the future. It can be characterized as the ratio of his desires and capabilities and, as a consequence, the degree and depth of his self-realization among others equal to him as a human.

Secondly, the harmony of the interests of an individual and human society within any social structure of any level, up to the future of Humanity. It can be expressed as an optimal combination of its maximum usefulness for everyone and personal interests.

Thirdly, the harmony of universal interests, i.e., large-scale optimization at the level of interstate relations based on common interests and values, followed by the transition to a single global community, without the hegemony of one over all.

Fourth, harmony between man and nature. A human should consciously deny himself the role of "king of nature" and realize himself as its guardian and protector.

And, finally, the entry of humanity into cosmic unity.

These signs can be considered key in the further development of Mankind. Of course, next to this, it is necessary to consider and implement other harmonies, such as interethnic and interfaith, as well as many others.

Opponents may say that the propositions put forward here are utopia. At the same time, they will reasonably refer to all previous historical practices. But do not forget that everything has its time. A new era is coming and many familiar things and dogmas should be rethought anew, i.e., on a fundamentally new understanding and cognition of a higher order.

There is no doubt that the survival of man, as such, is primarily connected with his being. It seems to be an eternal truth that being determines consciousness. Is it so? It is appropriate to recall the subject of the theological dispute: which is primary - the chicken or the egg? An eternal dispute and no results, but for us it is more important that there are both chickens and eggs. The situation is more complicated with being. This concept organically combines two sides of human existence: material goods and spiritual life.

The spiritual life of a human and society is a quality that distinguishes their being from natural existence and gives it social significance. It is in the spiritual life of man and society that the truly human essence is reflected and manifested. The spiritual life of a person is formed on the basis of his practical activity, as a special form of perception of the objective world and as a means of interaction with it. The structure of spiritual life is extremely complex, it is based on individual and social consciousness. The elements of spiritual life usually include spiritual needs, spiritual activity, spiritual values, spiritual relationships and spiritual communication.

A man's spiritual needs determine his desire for creativity, the creation of spiritual values, and the acquisition of the meaning of life. At the same time, spiritual needs do not arise by themselves. They are formed by a person's social environment through complex and lengthy processes of his upbringing and education.

Here it is appropriate to quote the statement of Metropolitan Anthony of Sourozh: "... spiritual life does not consist in lofty thoughts and strong experiences; such can be born from other sources. Spiritual life depends entirely on the influence of the Holy Spirit of God on us and on how divine power, grace, Christ, the Holy Spirit gradually change us, gradually make us conform to Christ, that is, like him, help us become both an example of God and a likeness of God."

Translated into secular language, this means that the spiritual life of the individual, especially during the transition period, should flow in full accordance with the true essence of the New Program through its Goal Vector of future phenomena, actions and events determined by the System.

Since consciousness is the core of a person's spiritual life, it is impossible not to at least try to identify the nature of this concept.

The most popular concept of consciousness is found and considered in philosophy, psychology and sociology. They have it as a basic concept and denotes a certain ability of ideal reproduction of reality and its implementation in various forms and mechanisms.

In psychology, consciousness is considered as the highest generalizing form of the psyche, as a product of socio-historical prerequisites for the formation of a person's personality

in the conditions of work and communication with other people. In this sense, consciousness is a "social product" and nothing else but conscious being. In other words: I am, I exist.

In philosophy, consciousness is considered as a property of highly organized matter, consisting in a mental reflection of reality, as a conscious being, a subjective image of the objective world, as a subjective reality in contrast to the objective, as an ideal in contrast to the material and in unity with it. In a narrower sense, consciousness refers to the highest form of mental reflection characteristic of a socially developed person, the ideal side of his goal-setting work activity.

But consciousness is more accessible, understandable and logical, S. I. Ozhegov defines it in his Dictionary of the Russian Language through the semantic content of the concept "the ability to think, reason and determine one's attitude to reality as a property of the highest nervous activity of a person." And yet, the question of how consciousness is formed, on what basis it functions, continues to be the object of close attention of scientists. And here it is impossible to do without considering such a category as "intelligence".

Intellect (from Lat. intellectus) - the general abilities for cognition, understanding and problem solving. This concept unites all the cognitive abilities of an individual: sensation, perception, memory, representation, thinking.

For a long time, there were two opinions about intelligence. According to the first of them, Intellect is a purely hereditary trait: either a person is born smart or not. According to the second point of view, Intellect is related to the speed of perception or response to external stimuli. Most scientists adhere to the first point of view. At the same time, heredity should be understood as illumination from above (a gift from God).

Various spheres of human activity involve the development of certain intellectual abilities. But in all cases, sensitivity to new topical issues is necessary. An indicator of the development of intelligence is a person's freedom from external restrictions, his lack of fear of the new and unusual. Thus, the time comes for the disclosure and development of the intellectual capabilities of each person and the construction of an intellectual, truly spiritual human society.

The transition to an intellectual society inevitably leads to radical changes in the arrangement of the state and the economy. Historically, the state, as a form of functioning of a particular human community, has not undergone any major changes. The essence of the state is most fully reflected in the well-known definition: "The state is a machine for maintaining the dominance of one class over another."

The "Encyclopedia of the Lawyer" interprets the term of the state as follows: "The state is the main institution of the political system of modern society and the most important form of its organization. The main purpose of the state is to organize political power and manage society. Any State expresses and protects the interests of the whole society and the interests of the ruling circles. The most characteristic features of the State are the presence of a power and management apparatus isolated from society and standing above it, and the presence of a coercive apparatus".

One of the main forms of functioning of the state is legislative activity. Laws issued by the State are binding on its citizens. Plato also said: "... every power establishes laws in its favor: democracy – democratic laws, tyranny – tyrannical, as well as in other cases. Having established laws, they declare them fair for those under their control – this is exactly what is useful to the authorities, and those who violate them are punished as violators of laws and justice".

Boris Krieger spoke even more sharply about the role of the state in his "Kitchen Philosophy": "The state is not interested in the welfare of a single individual. Despite the fact that the individual, as Rousseau argued, gives all of himself, his rights and freedom to the power of the state, in return he receives, at best, concern for the welfare of society as a whole. Any state can always afford to neglect the freedom and even the life of an individual".

In the new conditions, in the mode of harmonization of all human life, the state cannot exist in the usual way. New approaches are needed, coupled with new System Programs.

The new requirements can be implemented most fully within the framework of new economic relations.

Supporters of harmony have not ignored this aspect of human life, which is reflected in the doctrine of harmony of interests. The teaching was based on the condition of the absence of contradictions between the interests of the individual and society. At the same time, economic egoism was considered by them as a necessary condition for social well-being, and spontaneous competition leads to a greater increase in general well-being than conscious regulation of production. The thesis of solidarity of interests of all strata of society becomes the main link of the teaching.

According to J. B. Say, everyone in society helps each other: workers with their labor services, owners with their capital services, farmers with their land services.

One of the varieties of the doctrine of harmony of interests is monism. A. Mond in the book "Industry and Politics" (P, 1927) stated that "the best answer to socialists is to make every person a capitalist." He proposed to distribute shares of the enterprises where they work among the workers. In his opinion, in these conditions, the interest of workers in improving the efficiency of the enterprise, and consequently, of each of them, sharply increases. The conclusion is made about the senselessness of the economic war of workers with entrepreneurs. Further practice has shown the inconsistency of monism as a guide to action.

There are many examples from Russian life when economic reforms were supported by the population and vice versa, when reforms were perceived as a robbery.

The post-war monetary reform was treated with understanding by the working population, since it did not affect and did not infringe on the interests of conscientious citizens. Everyone still remembers the famous default in August 1998, because the state robbed its citizens. Such a robbery can also be attributed to the refusal of the state to fulfill its obligations to repay bonds.

The older generation longingly remembers the March price cuts for food and basic necessities and watched with horror the rampant price increases for all goods and especially for medicines.

It makes no sense to talk about an unacceptably high-income gap in different groups of the population. Once again, we have to make sure that the state is not able to provide a decent life for an ordinary citizen. As a result, the so-called "tambour philosophy" appeared. The meaning of this philosophy is that the power structures can say anything, and ordinary citizens have lived and will live.

In the new conditions, the economy should reflect the interests of every citizen and be understandable to all members of society. It is necessary to introduce such economic indicators that would help restore confidence in the authorities. As one of such indicators, it would be possible to introduce the volume of the consumer basket in physical and monetary terms. The introduction of this indicator allows you to visualize the efficiency of the economy. In addition, this makes it possible to switch to the balance method of forming the entire economic policy, and hence to effective public administration and regulation of the national economy. Special attention should be paid to the creation of a sound pricing system in the country.

The entire organizational and economic mechanism of the country's governance should be rebuilt. In the current mechanism, almost all power is concentrated in the Ministry of Finance. It plans money and distributes money. Its tasks should be limited. The distribution of budget funds should be handled by an independent structure, such as, for example, the Treasury of Russia. The planning and forecasting system should work more clearly.

In this section it is not possible to reveal all the mechanisms of transformation of the state, its transition to a new level of functioning.

Only the reference points of the transition period are indicated here, but even in this case it is obvious that there is a long and painstaking work under the control of the System.

It is also obvious that there is no other way for a person to create a new harmonious society.

2.3. Role and functions of the Economy in the societies of the past.

What function in the Goal Vector of the last 4,000 years, i.e., under the conditions of the old Program, was assigned to the development of practical management skills, i.e., Economics?

For a true and more refined understanding of this, it is necessary, first of all, to consider the essence of the issue from a different point of view, excluding traditional approaches in reasoning, both in economic history and in the history of the development of civilization as a whole. To do this, first of all, it is necessary to introduce the necessary restrictions, namely:

- to limit ourselves to the period of the last two centuries as the most active and intensive phase in actions and events to implement the Goal Vector of the old Program in the field of economic history, orientation in terms of pace and orientation in the development of civilization;

- in the current judgments for the future, to protect oneself from the comprehensively prevailing dogmatism of the established traditional historical postulates of the entire economic theory of the past, as a tool for organizing and managing economic issues, that is, the Economy,

within the framework of the old Program, by force imposed an uncontested dictate in determining the goals, paths and pace of development of civilization;

- to recognize the entire economic history of the past as inhumane, which excluded orientation towards people and in the name of people for the purposes of its development, applied them in the practice of implementation, as an economic tool, not a goal;

- as a foundation basis, accept the true essence of the Goal Vector itself, previously hidden from people by the old System and the Supersystem, within their Program.

It is known from the everyday experience of the past that the life of a person and society is continuous. No society can do without the continuous receipt and constant use of material goods necessary for existence. In the future, unfortunately, manna from heaven is not expected. So, we'll have to organize the active labor participation of a huge number of people scattered in space and time, turning it into an orderly structure of a social organization capable of reproduction and fair distribution of all necessary material goods and services in order to accompany and fully provide the necessary conditions for the performance and disclosure of their individual functions, by each Person. [For the first time, the new economy of Mankind, as an alternative to the previous one, must be given a targeted humanity.](#)

Previously, the economy did not have a focus on humanism. People were taken out of the scope of the target focus on them, when determining the ways of economic development at all stages of its development. The economy developed mainly for any other purposes, but not to meet the full needs of its harmonious development for not only the producers themselves, but also the rest of the participants in society, forced or voluntarily involved in the non-productive sphere. Labor was a coercive measure, as the main condition for the survival of everyone, rather than a creative urge to benefit everyone from its professional application in any sphere of reproduction and embodiment of their gifted abilities. This fundamentally predetermined everything, including the processes of the general cognitive development of the individual and his/her creative abilities, distancing people from the essence of Man and his/her predestination on Earth. Intensively, but in a distorted form from the true purpose of their very essence, a manic attitude towards consumer values was formed as an end in itself in the life of everyone and all together. Building up consumer values only in the name of increasing their number was brought to fanaticism and became not only an end in itself in life, but a basic forming element of the entire system of relations in the sphere of management in society, i.e., in the economy. Not only the target orientation on values, but also the whole structure of the system, symbolizing and personifying authority, the very structural formation of societies in a pyramidal form of construction - all this was oriented in the name of acquiring material values of a different nature, turning the entire way of life of societies into a state of irrepressible profit for the sake of profit. Russia and China, among the resisting societies, were the last, but they were not spared this condition. [It is in these states that there is no Man!](#)

What and who managed to stupefy the whole World in such a one-sided way, despite national, state, geographical, confessional, cultural-historical and other differences? How can this be avoided in the future? To answer such questions, first of all, it is necessary to show the

place and role of the economy in the societies of the past and express its role and functions in shaping the Humanity of the future.

First of all, how the current Economic science has realized and reflected this issue. This turned out most logically in the associated scientific opinion at the Plekhanov Russian Academy of Economics.

The economy is one of the structural and functional subsystems of society, which is responsible for providing material resources to society and its subsystems to perform their functions and to solve problems arising within and between them.

For a systematic understanding of the relationship between the economy and society, it has always been necessary to discover ways to overcome spatial, temporal and technological gaps between different links and stages of the process, i.e., the entire chain of labor participation in the transformation of resources into products that meet social and individual needs. These methods were embodied through forms of integration, through which all elements of the economic process, from material resources and labor to transportation, storage and distribution of goods, are connected into a complete economic process, i.e., a phenomenon unfolding in time and space. Integration is a mandatory property, without which the economic process would be impossible.

There was no consensus in economics, but the greatest agreement was reached on the recognition of exchange, redistribution and reciprocity - *the main forms of integration*.

The organization of economic life in different societies differs in the predominance of one form of integration in them, in relation to which the rest are subordinates, performing a supporting role. Therefore, forms of integration serve as a tool for classifying economic systems.

The most important form of integration, especially in the last century, - *exchange*. Exchange, as a form of integration of the economic process, is a counter-directed movement of goods and services between the parties, each of which strives for its own benefit. The simplest form is natural *exchange*. If it had been preserved as such, it would have been the most just form of cohabitation of people in society on the basis of mutual respect. However!

Usually, people do not think about the fact that random acts of *exchange* by themselves do not create a price that is mandatory for everyone. Such a price occurs only when there is a special institution specifically designed for *exchange*, i.e., the so-called *free market*. At the same time, the exchange can connect all the elements and all the participants into a complete economic process. Only, for what purpose?

The hidden misunderstanding of the true need for a market structure in society is one of the techniques of the former Conceptual power and an effective tool of influence in the management process! It is impossible to identify the exchange with the market. Exchange is one of the ways of transferring benefits between participants in economic activity. Other ways are redistribution and reciprocity. *The market is an institution, i.e., a stable social structure that exists specifically to ensure that acts of exchange are carried out in a socially or by someone else's recognized form, under management and control, is not necessarily of state significance.*

Such a rigid dictate of ideology and control in the last century was organized and executed by the supra-Jewish priesthood.

Taking into account the huge role of market exchange in the history, theory and tightly controlled ideology of economic life, a classification of present and existing economic systems was proposed: pre-market, market and post-market economic systems. Of greater interest are post-market systems, which include not only the economy of the USSR or communist China, but also the mixed economy of developed democratic societies of today's Western Europe, the USA and Japan. This form of integration, its necessary and obligatory radical transformation under new program conditions and, in some way, isolation from it, should be treated with special attention in the future.

What should characterize the relations in societies where such a form of integration as *redistribution* was widely practiced? The fact that it is not a type of individual behavior is evident from the fact that such transfers of goods and services cannot occur without the presence of a power center in society, from which and by whose will *redistribution* takes place. As a general principle, the actions of redistribution are observed in societies in which the *redistribution* of material goods and services, including land and natural resources, is concentrated in one place, from where they are distributed based on the requirements of custom, law or dictated by the circumstances of an authoritative decision of the central authority. This ensures the integration of professionally and geographically divided labor on the scale of society. Often, the *distribution* system relies on a network of centrally managed storage facilities, in which the results of production are collected in kind (the State Reserve of the Russian Federation). Sometimes the "gathering" was reduced to the concentration of administrative rights on produced goods and services that actually remained at the production sites, from where they were sent to the end-use points according to a pre-known plan or order from the center (Gosplan and the USSR State Security Service). In all cases, the principle is the same: gathering in the center and distributing from it. Both can be carried out only if there are official channels in society through which the movement of goods takes place. This form of integration has worked perfectly and is the most stable at many stages of economic development, but it is extremely dependent on the human factor and the specific structure of the process, i.e., in special accounting, reporting and control. This process must be tightly controlled by something and someone from the outside.

The most ancient form of integration - *reciprocity*. *Reciprocal* relations are very characteristic of societies whose main binding force is consanguinity. Its effect is also found in the present world in the Transcaucasian republics and many national regions of present-day Russia. Not taking into account the social conditionality of *reciprocity* in societies with a strong influence of consanguineous and clan relations led to the fact that many acts of mutual services arising from the requirements of consanguinity were perceived and prosecuted as criminal. Does this form of integration have a future? Undoubtedly, it has a great future, but its functions will no longer be related by blood.

What historians and economists traditionally call a slave-owning society, feudalism, capitalism, socialism, can be characterized by the predominance of one or another form of

integration. This predominance is manifested through the way land and labor are included in the economic process. Depending on political and ideological preferences, it was believed that the economy should be socialist or capitalist, naively believing that these terms explain the reason for the good or bad performance of the economy.

In fact, for the capitalist, socialist and liberal democratic economic system, the former System, through the program framework of the Goal Vector, defined functions hidden from people. And it was they who directly influenced the entire social structure and dictated the formation of Structural power. Namely:

- For the capitalist economic system – to ensure and accompany the development of all the necessary preferential basic social conditions for the formed and developing brain genotype 42 and the emerging genotype 44, bringing their quantitative composition to the framework of the "Golden Billion". From their composition, under conditions of strict limited controlled access, to organize an Executive System of Conceptual Power capable of managing the entire process of implementing the Program Functions of the current period within the Goal Vector that defines all manifestations, actions and events under the control of the Supersystem and System.

In the process of doing this step by step, i.e., discretely, public-state formations and their management were formed and improved in a local and international format. The system of cognition was improved through the system of all levels of education on the basis of elite regulation, the system of "selectivity" was worked out in all spheres of life, rigidly ensuring the predominant social position in societies of the established brain genotype 42 and the developing genotype 44. Legislatively and on the basis of the "customs and rituals" introduced by them, a system was formed to ensure that they received special material goods and services that guaranteed them a special social status in societies, symbolizing the function - "the power of force".

In the sphere of economics, it was supposed to give unshakably imperious forms to the entire complex management instrument, ensuring the steady mastery of 88% of the total volume of consumer values and 100% of the values from the volumes of the traded substitute, organizationally transfer it into diverse forms of capital, giving it the function - "the power of money".

To create a guaranteed illusory democracy in societies by organizing free access to issued non-binding "valuable documentary assets", strictly regulating their issue volumes, values and ownership rights. Execution of the final discrete step of the Goal Vector - "...to Concentrated Sovereignty", to be completed by the year 2000 by establishing full dictate over the natural resources of the planet introducing the mandatory form of integration - "World Market Exchange". Full management and regulation can be implemented through manifestations in actions and events through the "Globalization" program.

- For liberal democracy - within the framework of the developing platform of capitalist management, to bring the perfection of the administrative tool in all directions and forms of management to a state of complete concentration of "the power of force and the power of money", ensuring the transfer of the entire management of the Golden Billion structure to new

Performers from the Conceptual power, consisting only of brain genotype 44. To create all the necessary preferential basic social conditions for them, to ensure an appropriate administrative position of authority and a special social status in society, to guarantee the provision of material goods and services according to the status. Official and administrative powers should be fully accompanied and concentrated on the necessary efficiency and effectiveness, as the Executor of the Conceptual authorities.

In the sphere of economics, the created forms of authority of all economic instruments are to reassign and transfer all property rights to them, to the Executors from the Conceptual power of brain genotype 44, while preserving the possibility of limited (subordinate) administrative management in the areas of finance and forceful administrative support for brain genotype 42. To ensure the manifestation and preparation of brain genotype 46 ("Golden million"), to accompany it with all the necessary social conditions, to provide all the necessary material goods and services. To complete the definition of administrative-territorial zones of the future residence of all brain genotype 46, to ensure the construction of facilities, complexes and complete accompanying infrastructure by 2012.

To improve the illusory nature of liberalism and democracy in societies, deploying abstract activity and freedom in everything except management and penetration into the sphere of Structural power to anyone not related to brain genotypes 42 and 44. Representatives of these brain genotypes are allowed to lead a Structureless (Public) government, guaranteed to isolate it from any interference and penetration into the functions of the "power of force and the power of money". By administrative, organizational methods and technical means, it is guaranteed to provide information isolation from high-level knowledge, to lead other brain genotypes to mental, spiritual, psychophysiological and physical degradation of all those not related to the brain genotypes 42, 44 and 46. By 2012, it needed to be ready to switch to a different program function within the acquired position and condition.

- **For socialism** – as a management system, it has acquired a number of special functions, because the Goal Vector of the old Program was to give the territory of Russia a certain special status as the territory of the future residence of the main part of the "Golden Billion" and the entire composition of the "Golden Million". The formation of the entire territory of the USSR was not a random process. The unity into a single territory is dictated by the peculiarity of the location of objects and complexes of the Ebrov System, the preparation and manufacture of the entire complex of the resource ("natural") base. It was necessary to bring the resource base to a state acceptable in its composition and condition for use, additionally carrying out preliminary and partial development of it. Additionally, it was necessary to form special zonal conditions related to the preparation of the environment and to bring the condition of all accompanying Systems and Complexes necessary for comfortable living of brain genotype 46 and more, into the appropriate operating modes. And the whole tragicomic process of the spread of Bolshevism and the establishment of Soviet power in all territories that were united in the USSR, is a convincing and illustrative example of an important historical episode in the implementation of program processes dictated by the structure of Conceptual power through its Performers. Executed brilliantly.

In order to implement such a specific and extremely complex Goal Vector, for the first time, despite the different opinions of economic anthropologists, a complex system of State management, i.e., economics, was created with a huge aspect of the experiments conducted in administration and management. We will not get carried away with covering this issue, however, we will limit ourselves only to the part of processes and executed program functions hidden from people. Some of them should include:

- testing and working out the management of society without the participation of religious forms and tools. In the future, this was expressed as the ideological basis of society;
- replacement of the nature of the compulsory-force of labor with compulsory labor service, but it was called as an integral public honorable duty;
- substitution of the mandatory division of labor, for the work of enthusiasts without obligations of quality and orientation to quantity (collective farmer, virgin, northerner, Bamovets, etc.);
- testing of the integration method - *redistribution* in the management processes of a special complex large-scale management;
- to prepare and develop the entire system of necessary management and means of its support on the territory of Russia, as the area of the future residence of part of the "Golden Billion" and "Golden Million";
- to form the necessary volume of the circulating substitute for the further acquisition of it by the "Golden Billion" throughout the territory of Russia;
- to provide all the necessary social benefits and positions, to accompany the necessary material goods and services to everyone with brain genotypes 42 and 44.

In economic anthropology – a field of economic history that investigated the origin, development and disappearance of economic institutions, the difference in the ways of development between social and technical systems was emphasized. Technological progress, in their opinion, is endless. As for social organization, experts have noticed that in their multi-thousand-year history, people constantly reproduce a limited number of basic organizational forms, including economic ones. The historical specificity of different epochs is expressed in different combinations of essentially the same forms of social organization. Many economic forms that are perceived exclusively as phenomena of modern civilization, such as state regulation, planning, token money (as opposed to commodity money), material balances, monopoly prices, etc., actually turn out to have existed millennia ago in vanished civilizations, where they performed similar functions. Maybe people don't have enough imagination for perfection or there are some other reasons unrelated to the person? Economic anthropologists are unable to answer such a question.

Such monotony is due only to the fact that all these millennia (18,000 years) was controlled by one System and it did not plan to change anything. Are similar functions and management tools suitable for the future of Humanity? Yes, some tools can be saved by name, but their essence will be completely different. Everything will start to change now, that a different, native System has started to manage!

Cosmopolitanism and globalization

Cosmopolitanism, as a strategy, was introduced in 1888 as the most important point of the 100-year Program. The cosmopolitanism program had the following goals:

1. Installation of unified financial management.
2. The establishment of a single ideology for all brain genotypes 421 (Ararat), 441 (Mont Blanc, Alps) and a single information perception system by creating legends, "archaeological" miracles, the destruction of all structures and carriers of a different ideology.
3. Development and creation of a single mechanism for managing society, testing technologies for managing societies; capitalism, fascism, democracy, liberal democracy, socialism, and so on.
4. Ensuring control over all raw materials.
5. Preparation of conditions for the arrival of the Ruler of the Earth (Moshiach).

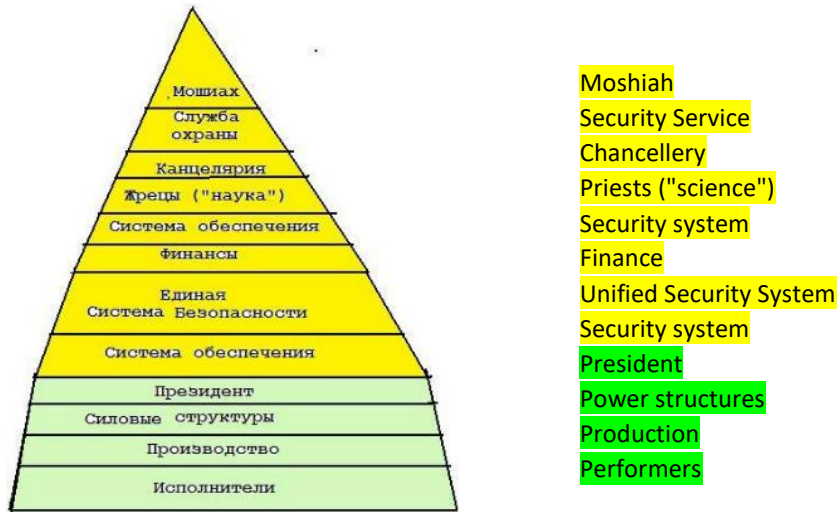

The remaining 5 points relate to the rules of behavior within brain genotypes 421 and 441.

Representatives of brain genotypes 421 and 441 received all the necessary information from the Control Systems and implemented it using the achievements of various Masonic orders gathered together taking into account the Program requirements in the Protocols of the Learned Elders of Zion. The Protocols themselves are not even a Program, they are wishes, but they reveal the essence of cosmopolitanism by more than 33% and were prepared, of course, not in a police station (as cosmopolitans wish).

Item 5 was executed with special zeal and clarity (the performer was P. Borodin).

The preparation of the throne room for Moshiach was completed by the appointed time. If we consider the items of the Cosmopolitanism Program, they are all fulfilled and have smoothly moved into the next stage of this program – Globalization.

Within the framework of the Globalization Program, the role of the State is being strengthened.

Globalization is the division of the entire System into two independent structures.

Within the framework of a single pyramid, we have:

- a closed upper part of the pyramid, information about the existence of which will be given in the form of legends;
- production structures, or States.

Special attention is paid to the power structures, which should not only provide the necessary replenishment of the upper pyramid, but also suppress any attempts at resistance.

The number of States cannot be greater than the number of objects of their provision. At the same time, there is only one upper pyramid, and some presidents may not be allowed to rule.

So, what are the anti-globalists trying to achieve?

The state remains, the colors and flags remain, the physiognomies of the presidents will, as before, often flash in production workshops and farms.

True, there is one but:

- the distribution of all wealth will be handled by specialists from the upper pyramid;
- in the absence of the concept of "substitute", only representatives of the upper pyramid will manage finances, while the population will use money in a simplified format, introduced specifically for them;

- there is no need to develop science in each individual country, it is enough to have distractions at the level of innovation proposals (on technology) to ensure production. Science can be controlled only by Moshiah and his executors, who have a communication channel for Software modifications;

- globalization implies a reduction in the population by more than 88%, while not considering the current state of the official, but his brain, because the brain of a pithecanthropus Management system is no longer satisfactory.

If there is a small correction of the Program, then it is not only Cosmopolitanism that will collapse, but also Globalization, because conceptual power must be precisely coordinated with the Program (regardless of desire).

At the same time, it should be noted that the creation of the Control and Audit Directorate (CAD) is one of the priorities of the Program.

Chapter 3. ECONOMY OF HUMANITY

INTRODUCTION

In the world scientific economic sphere, such a methodological tradition has developed to discuss economic problems without explicit connection with society and its problems. Society was more often understood either as having an economic nature, or as a superstructure over society. That is, the economic paradigm of society dominated more often than necessary.

Do we have the right to condemn it or maybe support it? Of course, I have no right to condemn, because this was the orientation of the Goal Vector of the old Program. The past belongs only to the past.

But to support Humanity in the future, as a Human social organization, of course not. There have always been problems of the relationship between the economy and society in its practical plan. We will not make this message superfluous; we will only clarify that our task within the framework of the new Program is not to circumvent this problem, but to lead it to a state of complete harmony between the future economy and Humanity. We did not consider it impertinence that we expressed the only way to solve this is to bring them into a single manageable state of Human Economy, as a single model of an expedient balance of economic and social development in the name of Man.

3.1 Fundamentals of the formation of Humanity as a single structure of social organization.

Many modern scientists and thinkers of the past paid great attention to the problems of the development of society. In many fields of scientific knowledge – sociology, psychology, anthropology, history, systems theory, ethnography, cultural studies, etc. - *have come to understand society as a social system of the highest order, controlling and reproducing the necessary and sufficient conditions for the collective and individual life of people.* I would like to show in an overview how the current scientific sphere is perceived by the social system, idealizing it in isolation from reality.

A social system is a term that distinguishes the world of people from other systems – natural, technical, etc. But from other social systems, such as the family, the state, various forms of association of people and their joint activities, society differs in that it contains them all. Within the boundaries of society, these developed and operating subsystems are connected by functional relationships. This means that each of them has its own purpose, its own place and role in the life and activities of society.

Society was understood as a *way and form of being* of people and therefore it cannot but be a reflection of their associated qualities. It is legitimate to talk about the structural and functional characteristics of society as a social system. All historical societies differed from each other by combinations of their structural and functional characteristics and no more.

The structural and functional theory of social systems defines four most important subsystems, i.e., four system functions, without the implementation of which society is not possible. Such subsystems should be considered: the state, or the political system; *value-integrative system*; *culture*; *economy*.

Their interaction ensures the existence or vital activity of the entire society.

The state, or the political subsystem of society, is responsible for its preservation and development in external relations and relationships, for maintaining the normal state and functioning of the other subsystems of society, for solving problems within each of them and in relationships with each other, i.e., for the proper level of performance of their system functions. The subsystem of the state, as a Structural power, includes the institutions of public administration in a complete set, corresponding to the time, legitimate forms of political activity of citizens, dressing them up in the framework of Nonstructural power, etc. To fulfill its complex systemic function, this subsystem needs material and other means, which it receives from other subsystems.

A *value-integrative* subsystem is needed to ensure the necessary level of socialization of young members of society. Thanks to this, they identify themselves with it on an ethnic, moral and mental level, feel the involvement of their personal destinies with the fate of society as a whole. The structural and functional content of this subsystem is represented by such institutions as the family, institutes of education and upbringing, the church, patriotic and cultural and educational organizations. The material base of this subsystem is the funds coming from other subsystems.

Culture serves as an expression of the main results of the history of society. It acts as a generator of continuous cultural innovation. Cultural achievements become the most important factor in the development of the whole society, as they saturate it with the spirit of creativity and creation. This makes culture the most valuable asset of society.

Economy - a sphere of activity in which three main issues are being resolved: what to produce, how to produce and for whom to produce. The actions of people in this area are guided by the desire for the greatest benefit, i.e., they are expressed in the use of resources and labor that brings the most income to the owners of economic resources. The economy is considered as a structurally separate, autonomous area in which people demonstrate maximizing behavior, as a result of which an optimal distribution of resources between uses is achieved. The main economic institution - the market - is understood as a spontaneously developed optimization mechanism. Its main characteristics are considered to be private ownership of all types of resources and complete non-interference of political and other forces in the free decisions of market participants competing for resources and consumers, as a result of which free market prices are formed for resources and products, reflecting the spontaneous interaction of the forces of supply and demand. These prices have the property of directing countless decisions of an infinite number of participants in the economy to the best result for everyone – optimal allocation of resources, full employment and maximum income.

If prices assume equilibrium values, then this is evidence that the economic system has come to an optimal state. (Economy, Part 1 p. 19, REA Plekhanova). That's how it should be according to science, yet!

Tears of emotion come even from people with a character as hard as granite! Nothing can be done, the centuries-old experience of the minds of leading thinkers allowed us to knock out these conclusions, beckoning to the ideal, on the granite slab of the history of all previous generations, who waited with humility and incredible patience for some bright future for coming generations, without specifying the number of steps and beds on this thorny and bloody path of complete uncertainty. However, some "chosen" guys in the process of such a movement, without assessing themselves by the level of animal instincts, do not get lost, but take all the necessary "bright future" at once and, as is customary and believed by the current economic science, do it with a special "benefit".

Economic processes are an integral part of the overall process of functioning of the social system of society and serve as the basis for determining the systemic function of the economy. This is without a doubt, it is only necessary to prioritize.

However, since we are making judgments about the formation of the future of Humanity as a social structure, it is necessary, first of all, **to acquire a number of inherent perceptions and realizations** that are significantly higher than the necessary conditions for the future, since they are dictated by the Goal Vector of future phenomena, actions and events within the framework of the new Program. This should not be taken as temporary dogmas, these are conditions without which there will be no **manifestation**, and therefore the existence of further **actions** and the embodiment of subsequent **events** is impossible. So, it is necessary to be aware of what has been said. It should also be understood that those designated by the System as the Executor of the specified, showing actions outside the program framework, are deprived of such an opportunity to be a Performer.

What should be taken into account in the new structure of the social organization for the transition period, what needs to be **found**, first of all, **in perceptions and awareness, in order to be within the framework of the resulting executive processes of the new Program?** It is necessary to acquire the following five requirements-conditions that are, in a certain sense, a "pass" into the future of Humanity, as **the only way to change the way and form of Human existence:**

3.1.1. Humanity is nothing but a single structure of social organization. As a social organization, Humanity is a single function designed for a model harmonious unification, provision and support for the manifestation and complete fulfillment of the functions of its purpose for each Person.

Idealizing the social system in isolation from the reality of the world around us, modern science mistaken and biased, came to understand **society as a system of the highest order.**

The lack of knowledge about the true essence of building the world, its real current state and its upcoming changes in the near future, led science to the illusion that society is precisely that *higher structural system that controls and reproduces the necessary and sufficient conditions for the collective and individual life of people*. This, first of all. And secondly, is it truly *social*?

Earlier we showed that the society of people within the framework of the old Program was a Subsystem. As a derivative Subsystem, each society, within its territorial definition, had functions covertly assigned to it by the System and, accordingly, was *controlled and accompanied* at a level that was not only not visible, but also felt and realized in a limited way, and only within the framework of the functions assigned to this society. The final conciliarity about everything unusually observed or felt did not exist, it was blocked. The main part of all the *necessary and sufficient conditions for human life* is not available for reproduction by people on their own. People are not able to create the atmosphere in its real structural form of energies, water with its most complex energy-informational state, form rivers, create primary flora and fauna, create and maintain the clock of the expiration of time, form spaces, create various energy structures and manage them, etc. People cannot create the world around them and rule on top of it. In the current state, people can only consume, destroying part of the unprotected forms of the surrounding world, barbarously applying the introduced destructive technologies of the interventionist System, and thus illusorily understand their, as it were, mastery of the world. Accordingly, any understanding of their "benefits" in the process of economic activity and activity in all other aspects of the way of life, the old System was laid down at the programmatic level as inhumane relative to each other and relative to the whole surrounding world. This is enough for reasoning on the question of the impossible humanity in the economy of the past and the extremely limited social level in all variants of the structures of previous societies.

Within the framework of the new Program, the world around us is restoring its former states at the structural and energy level. The surrounding world will soon complete its own changes, and the main part of the currently existing technologies will not be able to function at all – the environment will not allow its conditions.

Current human societies, no matter how technologically and structurally perfect they are, cannot provide themselves with any material goods and services without the technology of combustion, electricity, fuel, transport, transportable water, etc. I would like to clarify with current science what they would advise for societies, as the highest social structure – how to ensure such an honorable and important state and continue to be the one *controlling and reproducing the necessary and sufficient conditions for the collective and individual life of people*. At the same time, it is very important not to forget – it is necessary to do all this with maximum benefit, i.e., as before.

Both current technologies and former *societies of the higher order social system*, will not be able to exist in their old guise under the new Program. They will be destroyed as a technically and energetically unaccompanied atavism. Since in such a structural view and forms of existence, they generally have no functions, nor territorial certainty, nor programmatic and other support provided by the framework of the new Goal Vectors.

"God does not do everything himself, so as not to deprive us of free will and the part of glory due to us" (Machiavelli).

In place of all the multifaceted diversity of societies, now no longer connected with reality, comes Humanity as a single structure of social organization. The latter has acquired completely different complex functions of a higher level with the provided primary cognition of a higher order, capable of switching to a single function of a model harmonious association in other territorial, spatial and temporal frameworks for the Human being recreated.

The main subsystems of Humanity will be preserved only by their titles, namely: the state, or the political system (Structural power); value integrative system; culture; economy. But their functions and content change significantly in their true essence, and this is the will of the new Program.

Destructive technologies are completely changed by creative technologies. This fundamentally changes the quality of a person's being, i.e., the way and form. This qualitative change in the state of former societies will allow each preserved and recreated Human to come to the manifestation and complete fulfillment of the functions of their destiny in a short period of transition.

Humanity as a single social system should have structural and functional characteristics, i.e., subsystems. Such subsystems, unlike previous societies, acquire a different hierarchy in terms of functional significance and, at the same time, ensure in the very structure of the social organization of Man the arrival of a single-function model harmonious unification, capable of reliably ensuring and accompanying the full performance of functions by each individual. One should not hope for monarchical similarities, this is excluded. Transfer, or rather restoration of the Human brain to a significantly higher level, change the ways and forms of being, the possibility of freedom of mind and actions in the performance of their functions, a completely different, and not an animal level of awareness, of their purpose on Earth, will qualitatively change the attitude to each other. The territorial animal functions and other aggression are removed from the brain, the way of existence isolates from the conditions and possibilities of restoring the individual's selfishness, the life span of a person is significantly extended in the case of acquiring new brain qualities and its new properties. A person becomes a Human. The formation of world centers of forces of any orientation for their own purposes, as now, will be completely excluded. In the near future, the former animal qualities of aggression with the spider brain will be alien. The system will accompany its Subsystem, Humanity, as a highly intelligent unified structure of a social organization formed for a Human.

A more detailed consideration of the structure of the construction of Humanity and its management are discussed in Part 2 "Fundamentals of the Management of Humanity".

3.1.2. Humanity is a subsystem, but it is not a mechanism for the application of Man in the general structure of the hierarchy of software processes of the Earth model, as something secondary.

The Goal vector in the framework of the new Program provides a large number of functions for all Mankind, both strategic and phased, i.e., discrete.

The functions of a strategic nature are generally connected, first of all, with fundamental changes in the structures of all octave energies and bringing them to their former native state, restoring full harmony of the entire energy model of the Earth and their former functions in the general model of the Cosmos. Humanity's participation in this is connected with the acquisition of a completely new true knowledge, the restoration of the brain to the level of external intervention, bringing the processes of life support system management into true states of harmony, etc. Functions of a strategic nature for Humanity will be passively-active, but given the significant change in life expectancy, by more than an order of magnitude, they play a very significant role in shaping the way and form of being, the strategy of controlled harmony of settlements on the planet, etc. Moreover, it is through strategic functions that the quantitative and qualitative ordering of the entire population of the planet will be determined. Humanity will not have either an excess or a quantitative shortage. These are, first of all, issues not of a social, but of a functional nature, i.e., related to the purpose and active participation of man in the general processes of the Earth.

Humanity over the past 18,000 years, for the first time acquires a strategic target function in accordance with its true active purpose, and, finally, will cease to be used as a test animal, unable even to realize it.

Due to the complete change in the entire energy structure of the environment, Humanity is entrusted with a large number of discrete functions that are active. In general, it will require a lot of practical participation in the disposal of everything that was done under the control of the old program. As new knowledge is gained, it will be necessary to master fundamentally new creative technologies based on higher-order science at an extremely high rate. This will require not only great cognitive and creative efforts, but also the imparting of mass conscious enthusiasm, a complete restructuring of educational systems, the imparting of highly qualified strictly professional operator skills.

A very important and at the same time multi-stage function is the resettlement of Mankind. All resettlement will involve strict adherence to the System's recommendations, as it relates to the preparation of places of guaranteed and limited guaranteed life support and accompaniment. Moreover, each settlement and group of settlements, to the scale of a functional society, will be oriented by its profile purpose. It will be necessary to build a lot of new and apply fundamentally new construction technologies and materials, because the former ones in their majority will prove to be unsuitable.

An extremely important discrete function is the transition to receiving from the Earth energy system all the necessary life-support energies, maintenance, formation of conditions and benefits of one's being on fundamentally different technologies, radically different from the current destructive technologies. Only, this one discrete active function will completely destroy all the previous foundations of past forms and ways of being and, basically, will change the nature and orientation of labor in general, because it will answer the eternal question of economics in a different way: how to produce and for whom to produce, based only on the humane orientation of labor.

All the controversy about the greatest benefit for a very narrow circle will be eliminated with special attention to this issue from the new Conceptual authorities.

There is no point in considering and detailing all discrete functions, but through their implementation, all qualitative transformations will be implemented to change the way and form of Humanity's existence.

"Neither the grace of fate nor valor can be attributed to what was obtained without both" (Machiavelli).

Thus, Humanity, as a Subsystem, acquires not a passive state of its application, but passes into an active state of its participation and, through its improvement under the control of the System, will approach the fulfillment of its true functions on Earth.

3.1.3. Humanity is a social structure into which every Human voluntarily strives with all their spiritual and mental beginnings.

The most important, or rather, the basic beginning of any association of people, including in the sphere of management, i.e., in the sphere of economics, is **motivation**. Through all the stages of development and improvement of the economy, people had one motivation – *to work for the sake of obtaining material goods and services for their survival*. In short historical episodes of socialist economic management, labor took the form of an "honorable duty", and in other cases, labor always had a voluntary or, more often, compulsory nature. Since the nature of labor significantly influenced the definition of the way and form of being, therefore, it determined the social structure of society accordingly. What is the motivation – as such, is society with all its functional and structural definition and features.

No matter how difficult the path of development of all the previous societies with their constantly improving system of economic models (A. Smith's "Economic Man", Marxist, neoclassical, Keynesian, socio-economic, national-cultural) - none of these changed people's motivation. They also did not change the attitude towards working people, and improve oppression and depression to varying degrees and with different administrative or technical techniques. Recently, due to the processes of globalization, which are polarizing the world from the periphery and center, they have additionally begun to take into account which cultural values and stereotypes hinder international unification, as well as contribute to economic prosperity. But all this is not for working people. The influence on the system of economic relations of other factors rooted in the spiritual world, social consciousness of justice, education of the population, its political culture, work ethic, etc., has been considered in theory, but only in theory. More often, the results of these scientific studies, on the contrary, were covertly used against people of labor.

No matter how the most important subsystem of society, the state, is improved, the subjective motivation of the state bureaucracy increasingly contradicts the objective nature of public benefit for man. Because, *"... a market view of a human is a market view of society as a whole"* (K. Polanyi).

Only in Russia is there an abundance of such material that can be given the right shape - these are the people who are capable and can be a Human. Only Russia can feel the stench of barbarian domination from the old System more than anyone else.

During the formation of Humanity as a new type of social structure, a fundamentally different, previously non-existent motivation acquires special significance - to voluntarily strive with all your spiritual and mental beginnings for Humanity as a single social structure created in the name of man. This is not the opinion of futurologists from temporary oblivion. In such an aspiring state, the System will transfer to Man, giving him a brain of higher octaves – to be applied, freeing him from the animal state.

In this regard, the role of such important subsystems of the social structure as the Economy, Culture and the Value-integrative System of Humanity as subsystems forming, guaranteeing and accompanying such motivation, increases significantly, i.e., both structurally and functionally. More detailed judgments about this are provided in Part 2.

3.1.4. Striving for Humanity is not for reasons and the need for survival, but for reasons of one's own conscious professional usefulness, i.e., the desire to give everything possible from oneself, for everyone, feeling one's primary origin in a social organization, i.e., finding harmony with Humanity.

For the first time in many millennia, a Human and a new type of social structure organized for him, Humanity, acquire active functions of direct participation in the implementation of program processes determined by the new Goal Vector. Preparatory transitional processes are being completed to provide a completely different and higher-level knowledge, allowing a Human to embark on the path of movement to the truth with awareness of their destiny on Earth. Previously, under violent influence from the outside, the human brain was technically blocked from its true capabilities - to realize its genetically professional usefulness, its only uniqueness among equals, its special significance for the benefit of all others. In accordance with this, He could not, either in speculative or in sensory images and sensations, nor in the peaks of psychic emotional harmonies, nor in any other representations, realize all his personal importance of the entire complex individual being, for the sake of the being of all others of his peers. He could not comprehend the degree of importance and, above all, the level of total responsibility for his primary social beginning, from which the general social unity begins equally, as from all his equals. He could not realize the degree of personal social responsibility to the whole social structure - if not me, then no one else! No socialisms and communisms, with their hoarded oppression of people, could and never will be able to replace such a state and such a socially conscious unity.

Having located and acquired his harmony, Man will find harmony with Humanity. This is higher than the motivation of an individual, it is an individual condition for the right to live on Earth.

"You have to go down into the valley to cover the hills and mountains with your eyes, and climb up the mountain to cover the valley with your eyes". For the people of Russia, the uphill movement has begun.

3.1.5. His universal participation, including work, will be embodied by a Human with Intelligence, i.e., with a full aspiration to conscientiousness with a truly realized personal function as a Man and as an important element of the universal harmony of life on Earth.

Every single Human is a micro and macro-scale personality. Nowadays there are many uncertain and undecided people in life. Their aimless serving of their measured biological life span, the animal consumerist state of irrepressible greed and lowly worldly pleasures, the current way and form of their being - doom them to be superfluous in this future world, which came into force yesterday. Since their use as experimental material for the programs of the old System has ended, the new program does not need such a limited qualitative state of the brain.

Each recreated Human is especially dear, unique, has a specific active function in the overall execution of the new software processes. The level of new knowledge will allow a Human to gain a certain life universality and his active positional position in the new social structure, including initiative voluntary full dedication through work in the name of others.

Consciously understanding the importance of His personal destiny, He will be differently focused, spiritually and mentally inclined toward the results and quality of His labor, thus acquiring self-controlled conscientiousness in all His deeds and actions. This attitude and this level of condition and conscientiousness of the majority of Humanity's participants will allow and lead to universal harmony of life on Earth. This is not an easy path, but it is quite short-lived and the term for it is defined by the new Program - the transition period. Mankind will be rewarded for this with another kind of benefit, which it has not acquired before (18,000 years) - a stable contact with the Most High (including mind). Humanity is a different world of conscious, rather than controlled, priorities of spiritual, internal and material value.

At first glance, after reading the above, it may seem that this is a complete utopia or a crazy dream of futurologists. However, one should not rush to conclusions.

These are really the five requirements announced by the new Goal Vector-conditions that will have to be passed, because they are basically an accumulated "pass" to the future of Humanity.

The current state of the brain of the majority, indeed, can lead to such a conclusion. There is no need to argue about this issue. It will suffice to report that in the near future this opinion will be drastically changed and, basically, not to the wishes of the people. Many previously blocked brain functions will be in an active state, with higher octaves and completely different possibilities. Therefore, a lot will change in Man and about Man, and it will not take decades for this.

3.2 Strategy of the new Economy of Humanity as a subsystem of the unified structure of a social organization.

No other economy, except for the Russian economy, has went through all the diversity of economic forms that could have been organized by the Executors of the Conceptual Authority within the processes of the old Program. Russia is a former testing ground for the forms and methods of economic management at all "stages of the civilization's historical

development" and testing ways and forms of being, functions and structures of all possible social formations. We will leave it to the past to evaluate the level of development of the past.

In determining the strategy of the new Economy of Mankind, it is now more important to determine not by the sphere of assessment of the material resource base, which traditionally began and built the forecasts of specialists from the past, rather, it is more important to clarify the current state of power and management and organizational resources, which will have to implement it.

3.2.1. Why is it impractical to assess the material resource base?

Due to the fact that the process already underway will be completed in the shortest possible time, namely: the elimination of foreign basic octave energies of the interventional System that was imported from outside, together with all its docking energies (18 basic octaves); restoration to the true state of the basic foundation for the formation of spaces (cubic to tetrahedral and, later, to dodecahedral); the elimination of all previous control systems, control and complex support, together with part of the complexes and objects, etc. - the change of the energy and structural foundations of the environment of the entire Earth model will be completed, and everything will be brought to its true native state. This should be understood as the main thing.

Soon all complex changes associated with the transmutation of almost all chemical elements will be completed, fundamental changes will occur in the geosphere, the aquosphere and the aerosphere. Serious changes are already subject to, and will be completed in the shortest possible time, changes in the basic technological foundations of combustion of all types of fuels, transformation of electricity, changed conditions for the operation of digital technologies and computer technology, and much more. All this will cause a direct need, in the near future, to completely change the approach and the previous understanding of the truth of values, their role and function. This, in turn, will change the material essence of the currently existing substitute for the true and convertible, as a result of which there will be a radical change in the functions of not only money, but also the entire dominant complex of financial institutions and the financial system itself. It, as an essential basis of the entire management mechanism, will undergo not only structural changes, but also functional ones. It does not depend on the will and desire of its current organizers and managers. Their inert auto-motor power functions will dissolve in the near future unnoticeably and unfelt by them. There is no financial and economic crisis, the processes of the old Program have been completed and are no longer manageable. Any attempts of extra-programmatic new actions to save the old one will be harshly suppressed by the System.

There is no need to provide any evidence of this, there are enough of them to this day. Let the unbeliever prove to himself, such is his fate. In a word, changes in the way and form of being as a whole will begin to manifest themselves very quickly.

In this connection, it is complete absurdity for "present specialists" to make an estimated forecast in the sphere of material and other resources, even for the period of the next 8-10 months. It is not only meaningless to build a value-based strategy for the future and a

corresponding management strategy without an understanding of what is currently happening. How to estimate and what to estimate is not a topic for discussion now, but even this does not cause us any difficulties, there is complete certainty. This does not cause us any difficulty. [There are much more important questions – such as, the organizing and managerial principle.](#)

3.2.2. Current state of the power-management and organizational resource.

The transition period defined by the Goal Vector of the new Program, expressed in the length of 12 years. It is performed in two stage episodes: the 1st stage – four years; the 2nd stage - 8 years.

The 1st stage is the most difficult, because it is during its expiration that all the former rebuilt micro and macro systems of the world economy will be destroyed, many countries for various reasons will practically cease to exist as societies. There will be serious problems in maintaining the necessary level of production of primarily necessary material goods and services for the survival of societies. The most difficult situation will develop in the field of energy, transport, technical controls and information. A particularly difficult situation is the supply of the necessary amount of potable water. All this will lead to far from extraordinary behavior of people.

At the same time, it will be necessary to rebuild the entire sphere of the country's economy, both in functional and organizational terms, and in the basic-element plan of all the necessary production foundations on the basis of new technologies that have not yet been provided for judgments. In this regard, it is appropriate and necessary to emphasize that the management of the economy, i.e., the formation of a "Special Economy" at the first stage of the transition period and its corresponding strategy entirely depends on and is based on the [Managing and Organizing of special resources](#). It cannot be both evaluated and overestimated, it must be realized and prepared.

This is the whole historical feature of the transition period, especially its first stage. Features of conditions in the organization of management and economic entities in the main areas during the transition period, we will consider in the aftermath.

An extraordinary and historical role in this process is assigned to Russia – through it and its organizing, to a lesser extent managing, role, the people of the planet will find their salvation.

Now, the only important thing is the current state of the organizing and controlling principle in the conditions of the beginning and developing processes of changes in the way and form of being, bringing primary actions in line with the framework of the ongoing processes of the new Program. On other issues, the new Executors of the Conceptual Authority will provide practical assistance to the Structural Authority.

"Consumption, in the beginning, is difficult to recognize, but easy to treat, and when it is already progressing, it is easy to recognize, but difficult to treat" (Machiavelli).

First of all, it is necessary to express the now established legal basis for the actions and existence of the entire governing and organizing principle.

For the *governing* principle, symbolizing all aspects of established and manifested authority, from the time of "Roman law" to this day, there is a single characteristic of the original concept of law - *imperious obligation, based on submission to force*. The foundational basis of such an initial concept of law is:

fas – the external framework of the existence of a community (society), established by the Supreme state and the supreme sanction for its violation (external influence; exile; surrender to the will of the Almighty);

jus – the internal law of the community (society), formed by the internal, i.e., public consent of the community, without any participation of Higher forces. Imperious compulsion.

The current stage and its entire state, the so-called "current historical period", is a given that we have no right to critically evaluate, but we are obliged to take into account the features of the states we are interested in. Democracy and liberal democracy now prevail in most of the leading countries of the world, which is not so new for history. Let's just note that the foundational basis of the original concept of law "jus" is the defining one in most countries.

And the foundational basis of "fas" has acquired a hidden character, concerning most of all the Performers of the former Conceptual power. Although it was not large-scale, it was very effective, because all software processes were managed through it. The current state of "fas", for everyone and for everything that was associated with the old Program, is no longer effective.

In the future it is necessary, to some extent, to predetermine the change in significance according to the specified foundational basis of "fas" - it will gain more significant importance than it has. Already at the first stage of the transition period, mainly for Performers of the level of the new Conceptual power, and from the second stage of the transition period with an increasing number of the involved, it will be dominant for all those who first of all will acquire a state of elevated brain octaves. But this is in the near future, and now about the current state.

What are the weaknesses of the current power, can it in such a structural format take over and perform the functions of organizing and governing the beginning events of the new Program, in such a responsible step for the entire Planet? It would be advisable to consider only Russia, because it has determined the dominant word and deed in future events. It is extremely revealing, useful and relevant to recall a great thinker from the distant past of the time when brains were under less control of the old System – Machiavelli.

"Then, as those who come into power for money and other violence, and no thanks to intelligence and abilities, it is easy to gain power, but it is difficult to keep it. Bloody efforts are required". Liberal democracy has not only not avoided this, because it cannot avoid it with all its embellished appearance in loosely defined terms. As if flying all the way to the goal on promising slogans, they face many difficulties later, especially in the field of economics and its management. *"Because only power as a sign of mercy is priceless, and every other one has acquired a price and not a small one"*.

The weakness of the power of liberal democracy is their short term and frequent election - *"Like everything in nature that is born and grows too quickly, it does not have time to put down roots or branches, and is why they perish in the first bad weather"*.

"The whole hassle with electability can be nothing more than absurd, desired not by the electors, but more by the elected. The electors, at best and with very active persuasion of them, understand that the maximum they can achieve is that as a result of the whole electoral leapfrog, if not exactly the one they wanted, then at least not the one they did not want". For brevity and depth, there is no need for further comments. The only reasonable approach is required, having an awareness of the inevitable future changes – to organize a correct understanding of the need for such a level of authority that could fulfill the most important historical function - the mission of the "Structural Power of a special period". There may also be primary rejection at the first steps by current specialists and managers who did not realize this. However!

The clash of all power principles is resolved in three ways: either by autocracy; or by lawlessness; or by freedom.

Lawlessness, which many are ready to strive for, and have taken as the basis of their form of being. This is unacceptable by the current System, and it is impossible, because from lawlessness to lawlessness is not a step forward, such steps have already been taken back and forth by the revolutionists;

Freedom - people are not ready for true freedom in terms of the state and level of the brain, understanding it and perceiving it as freedom from freedom, they understand freedom as some Protestantism organized by someone, opposing any power and control in general. All Protestants have one thing in common – what they have not developed or have not completed in their studies, they protest. This is all due to the scarcity of mind and the lack of an elementary value-integrative readiness of the individual in relation to society. This also applies, to a greater extent, to the Liberal Democrats. Freedom cannot be for itself; it is either for everyone or for no one. Freedom, as a social tool of the future, is undeniable for Humanity, but there is a very serious path to such true freedom, connected with the reconstruction of Man. So, we will dream about it intelligently for now, in silence.

Autocracy - understood as governance, in which all power is concentrated in the hands of one person. And is it really so scary and who organizes this fear?

By its nature, power is a social phenomenon (public) because it arises in society. A society without power is chaos, disorganization, self-destruction of social ties. The need for power mechanisms is due to a number of reasons, and above all the need to give expediency, reasonableness, organization to interactions between people, creating rules of behavior common to all. Especially in difficult conditions.

The fear of autocracy is organized, first of all, by those who themselves strive to be *involved* in power, i.e., to have everything and a lot immediately, but not to be *invested* with responsibility for the results of their rule. Liberal democracy suffers from this.

Realizing the truth of the upcoming processes of change and, accordingly, the extreme need for the concentration of managerial and organizing potential, only one option is possible – *Autocracy in the form of Presidential Rule*. Such a power can and should be determined for a period of at least until the end of the transition period and will be accompanied in its actions by active support from the Executors of the Conceptual Power within the framework of the new

Program. In a difficult period, only unity of command can be determined, i.e., this is an organizational form of leadership in public administration, in which one official is at the head of the management body, authorized by the Conceptual Authority alone to adopt legally binding management acts. Such a person must have both the legal basis of "Jus" and "Fas". *It is in this format that Autocracy isolates society from all the weak qualities and inability of liberal democracy to govern in the interests of society, and will also be able to perform all the necessary functions of power in an extremely difficult situation of the transition period.*

3.2.3. Strategy of the Human Economy for the transition period.

Before highlighting the proposed Strategy of the Economy, it is necessary to show the following clarifying questions and limitations: the specifics of the conditions in which the program is to be implemented; the main benchmarks on issues related to determining what needs to be created and changed in the basic part of the entire management process; the objectives of the strategy and who they are focused on; the possibilities of the resource base and limitations in its application; guidelines for methodology, principles and time frames.

3.2.3.1. Features of the conditions in which the program will be implemented.

The completion of the basic energy structural transformations of the environment is coming, which will lead to generalized changes and features at the first stage of the transition period. They will directly affect the change in the form and way of being of the entire society of the Planet. These should include:

- changing the transformation of electricity;
- transmutation of all chemical elements with a change in atomic structure;
- changing the structure of the water grid with a complete change in its energy-informational state;
- change of the basic state of all currently used fuels for combustion technology;
- stopping gunpowder combustion;
- changes in the structure and states of radiation grids, termination of operation of nuclear power generating facilities and devices (weapons, nuclear power plants);
- a complete change in the established climatic conditions with their cardinal opposite circulation;
- change of the entire system of the outflow of rivers and the formation of lakes, etc.

This is by no means a complete list of changes whose time frame is very limited, and the above is not predictive or futurological nonsense. The consequences of these changes are not subject to prediction, they should be taken as a given. Most of them will play both positive and negative roles in the implementation of program processes. In any case, their implementation will manifest a number of conditions, which the current society has not had to meet.

The majority of the population in the regions of Southeast Asia, Asia Minor and Central Asia, the Middle East and the Mediterranean zone, the Scandinavian countries, in most of the territory of old Europe and North America - will be in a particularly unfavorable state for

people. People will retain, basically, only motor functions in the brain, extremely massive death through epidemic diseases, extremely limited controllability in the absence of awareness of the situation that is essentially occurring. It will require an unusually large-scale operational work, a high degree of readiness and professional aptitude for making strategic unconventional management decisions. Most of the traditional methods and means of local and global management will not be acceptable. Force support and coercion to implement decisions taken will be practically reduced to zero - gunpowder, rocket and other types of fuel will not be able to burn, the bulk of the personnel of the security forces will not be able to fulfill their purpose, force support will be practically ineffective.

3.2.3.2. The main benchmarks for changing the basic part of the entire management process.

It will require the concentration of organizing efforts to perform important economic steps at a high pace. To organize and carry out the development and transition to new technologies for generating electricity and other types of energy on a local and general territorial scale. To create anew and restore the entire transport network using new types of energy, taking into account the prospects for new settlements. To master building materials on a new structural basis of chemical elements and organize their mass production and application. To proceed with the execution of the plan for the construction of new settlements in areas accompanied and guaranteed by the Life Support System, to organize the relocation of existing infrastructure systems to new settlement sites. Reorient all spheres of management to replace with new metals and metal structures. To organize agriculture taking into account the changing climatic conditions and to reorient animal husbandry and fishing. All production facilities located in the zone of guaranteed life support conditions, apply and convert to new production facilities, modifying them for the primary necessary industrial products with further expansion of the production sphere to other regions, etc. There is no need to list everything needed for execution in the first place, such detail does not play a role in determining the strategy. The main thing at the first stage is the rescue of the surviving population and the organization of their survival.

The second stage is the development of new technologies and their comprehensive implementation in all branches of the new management system being created. At the next stage – the final completion of the creation of the system of Human Economy.

3.2.3.3. The purpose of the strategy of the Human Economy.

An indispensable condition for the correct orientation towards the goals of the future Economy, within the framework of the new Program, is the realization that everything that happens in the future is inevitable and does not depend on the desire of the majority or the unwillingness of the minority. The entire spectrum of changes and transformations provided for by the Goal Vector, will be executed and accompanied by the System.

The target framework defined by the program is based on associated conditions that will be accumulated in the near future by all changing environmental conditions. In these difficult conditions, the main objectives of a special management system are:

- the whole system of organizing and managing actions should be oriented step by step to provide the primary necessary conditions for the survival of the remaining part of the population in the European part of Russia, with a further increase in the pace and volume of construction of a new economic system in the rest of its territory, restoring and creating the basic industrial potential on a new technological basis of a different level;

- to ensure the restoration on a new functional basis of all subsystems and structures of the new social instrument - Mankind, to create on a new technological basis a new information and cognitive environment under the control and management of Structural Power, with special attention in this period to children and youth;

- to create a system for the transition to a new cognition in the basic sciences, change the structure of education and upbringing, organize the retraining of specialists of the entire scientific and scientific-production industry, to restore research centers and bring them to an appropriate level of cognition, carry out a targeted reorientation and change the structure of science management;

- create a new financial system in accordance with the new structure of the world financial institutions, ensure a rapid transition to a new system of assessment values;

- to carry out certification of the entire natural complex and other resource base, to organize a system of strict control over its use, replenishment and replacement;

- to create a system of safe and expedient land use. The entire territory, guaranteed to be accompanied by a life-support system, should be transferred to a position of strict control of the target application under the full responsibility of the Structural Authority;

- to create an integrated transport system based on new principles of energy application on a new technical and technological basis;

- to ensure the restoration of flora and fauna and to develop fish farming in relation to new climatic and other conditions;

- to organize full comprehensive assistance to the remaining part of the population of other countries with preserved and accompanied life support conditions, integrating the created social tools and subsystems into a single integrated system of Humanity.

These basic principles are taken into account in the process of organizing all governing and managerial activities in the implementation of the strategy for building the Human Economy, which provides for two periods: execution in the "main" and execution in the "final".

3.2.3.4. Time frames of execution periods:

- "main" execution, carried out in a transitional period (12 years) in two stages (4 and 8 years), the completion date is 2022;

- "final" execution, carried out in a subsequent period (8 years), in one stage, the completion date is 2030.

3.2.3.5. The strategy of the Human Economy for the transition period.

The old program has ended, the effectiveness of all previously controlling complexes and systems has been stopped and terminated, management processes no longer have a basis

for their existence, to give authority to Performers in their actions to organize events during execution, due to the destruction of all aspects of their energy support. All connections of influence and control from outside, i.e., from the Moon, the Sun and the satellites of the planets, have been terminated, i.e., the associated Ebrov brain of the interventionists has been eliminated. This state was immediately reflected in all the realities of the material world, but there are no explanations for this, except for meaningless guesses and false statements. Natural and weather anomalies, frequent earthquake processes, increased activity of volcanoes, melting of age-old ice, etc. - have become extremely intense and influential in changing the world around us. Many expect that this will last for decades, alas, since the spring of 2010, this period is so instantaneous that the population of the Planet will be very surprised by a sharp change and not only of the climate. Moreover, in the society of the world, the entire previously well-established mechanism for managing the world economy began to fail more and more often, turning into states of irreversible processes and complete indecision of growing problems. The traditional managerial decisions taken at any collegial level, apart from delaying and replicating problems, no longer lead to anything. All attempts to keep some local or global managerial and power states at the same level, lead to nothing. Tales of the struggle with global terrorism and other fictional enemies, no longer work. The entire civilized world, falling steadily into a catastrophic abyss at a steadily increasing pace, feels and recognizes that there is no natural way out of the current situation, relying on the experience of the past, no longer exists. Everyone understands that it is impossible to escape alone, but it does not work collectively, only additional difficulties appear. All sorts of previously undertaken magical tricks and sacred techniques do not work. Something has happened that can no longer be subject to any intervention on the part of people and in general no longer depends on them and on their actions.

No longer does the fictional "power", organized by the "world market", magically attract and surprise with its "might". Limited to a handful of gesheftmachers. Their fabulous accumulations of depreciating money can no longer so powerfully influence the methods and forms of existence of world society. The bulk of people working more out of the habit of working than out of the need to survive, listlessly contemplates this process of the dying out of everything around them and everywhere begins to excite the hum of rebellion and robbery. This is the verdict of all the achieved results of the development of society within the framework of the established old Program. She's gone! And the results of her achievements are no longer needed by the now emerging new world!

And what follows this verdict, what really needs to be done and, at the same time, in a really extremely short time?

First of all, it is necessary for everyone for themselves, i.e., for those who are still capable of elementary logic, to realize that it is not possible to revive all this that no longer exists.

The world has already changed, it is necessary to prepare for life in a new world. Old skills, technologies, structural and functional systems will not help to regain their former authority and adjust the functioning of society and its entire former management system to the

new conditions of the changed environment. The structural forms of management of the new System cannot accompany and give effectiveness to everything that was associated with the old states or, in any way, related to the old System. All this former conditional sufficiency to manifest itself in actions and events is dead, and not by the desire and will of people. She is dead by her non-existence. It is no longer there, which means that everything that was created, accompanied, controlled and directed by it is no more. Independently people will not be able to do anything to support their existence, in place of the old Management System. They will not be able to return the entire surrounding world to its previous level, to bring its energy informational state to the old conditions, because they are alien to our planet Earth, it is freed from this.

A new program has begun, under the guidance and control of the new System, only it and only with its accompaniment can something be done, and, people included. Anything outside the actions and frameworks of the new System is a counteraction to the control processes that it creates and provides. Everything that happens outside the framework of the new Program will be strictly suppressed.

By these circumstances, by realizing the true essence of the Goal Vector of future phenomena, actions and events within the framework of the new Program, were we allowed to express the essence of the strategy of the new Economy of Mankind.

The New Economy must be defined as: **"The Strategy of the Expedient Balance of the Economic and Social Development of Mankind"**.

This strategy is a concentrated vector of governing and organizing functions of Structural Power, as a **manifestation**, behind which all necessary and sufficient **actions and events** within the new Program should and can be organized by it, fully corresponding to the true Goal Vector.

The step-by-step essence of practical actions is worked out and executed with full assistance and help from the new Executors from the Conceptual Power.

3.2.3.6. Organizational-structural and settlement basis of the new strategy.

The organizational-structural and settlement basis is represented by: the base settlement foundation; the base management foundation; a form of integration; a complementary social subsystem - Structureless power.

The basic calculation basis is the functional-territorial passport certification system.

What needs to be understood by a functional-territorial passport certification of a certain territory and, most importantly, what should be put into the concept of a functional territory?

By itself, the idea of economic passports is far from new. It has been practiced repeatedly. Each time, when applying passport certifications to any region, they set some specific local goal. This was especially actively done in Russia at the end of the twentieth century.

It seemed that it was possible and expedient to develop a strategy for the development of the region through its passport certification. To do this, they limited themselves to an

amateur set of programs and projects of a commercial nature, tried to frame the scope of interest of the current administrative apparatus at the local and federal levels. Further, lobbying techniques were undertaken at the instances of the apparatus of officials, bearing serious material and other losses, participating in the general process of the ultimate egoism of commercial ideas and projects. In general, this whole process, at best, ended with a kind of spatial large-scale idea of an indefinite nature and goal, sometimes brought to the state level. There were a lot of reasonable and useful ideas and suggestions in individual projects. But what was the overall goal – everything was focused on the interests of getting the maximum personal benefit by the organizers, covered with beautiful slogans about universal usefulness for a large-scale or local society. In fact, it all fit into the usual framework of using the budgetary resources of the whole society in the interests of the narrow framework of the private individual. Based on this, the main part of all these steps was not supported and not followed, even by the old System.

We are putting a completely different functional and structural idea into the passport certification process, which was not previously considered:

- territorial divisions of the economic entities under consideration must necessarily be linked to the true functions of these territories. The delineation of territories can be performed only by function. This function is determined only by the System and information about territorial functions is provided through Performers from the Conceptual Authority. The functions are not the same, there is no duplication, each of them is unique. Any other administrative attempts to divide territories on some other basis, other than the System, will be a complete mistake and will lead to meaninglessness in any organizing and practical actions in such a region. Therefore, the leading feature of the territorial definition is the function of this territory in the general functional territorial model of Humanity on a local and global scale, with full and appropriate energy information support and the level of support for guaranteed life support conditions. The territorial-functional model of the integrated management system (Economy) should be strictly oriented towards the full and indispensable implementation of all the necessary supporting conditions that determine the way and form of Humanity's existence on a local and global scale. Humanity should not limit itself to any need, it should provide comfortable conditions for every Human who has a truly active social position in Humanity. A territorial-functional model for each stage of development, for the level of Structural Authority, will be provided;

- based on the territorial and functional definition, a real strategy of phased development and measures for further retention of the achieved level for each functional territory is being formed. The step-by-step target framework of the formed management system, the volumes of natural and additionally required resource indicators, the scope of necessary and possible volumes of manufactured products or volumes of intangible participation (providing or accompanying), the constituent system complex of transport services of the entire created economic system are expressed. Particular attention is paid to the local autonomous energy system, the volumes of independently generated and additionally required energy of various kinds that require support from the System;

- the most important innovation is the target definition and distribution of all types of substitutes according to the Territorial-functional model of an integrated economic system (Economy) of a local and global scale. It is the definition and distribution of all types of true substitutes that is the basis for calculating, including all the necessary and required amounts of the circulating substitute and future money derived from all their forms and types. It is only on the basis of the cathedral volume and taking into account the strategy of the functioning of the Financial System of Mankind that is being rebuilt in the creation and development of the entire Territorial-functional Model. The required volumes of financial support of all types and forms are determined and distributed for each territory separately and collectively as a whole. This work is performed jointly with the KRU. On this basis, as the primary base, the entire model of the Financial System of Mankind is built in its full structural and functional features and fundamental novelty, fundamentally different from the existing one. Only in this way is a guaranteed basis for compliance with the main target orientation of the entire management system – guaranteed humanity, i.e., everything for a Human and in the name of a Human. There is nothing in common with the ideas of communism and socialism. This Financial System provides guaranteed maintenance and support for the functioning of social subsystems: local and global Structural power, value-integrative subsystem, culture and additionally introduced subsystems of Structureless power. These subsystems are a completely eliminated platform of bureaucratic outrage and bribery. The purity of such a guaranteed state will be under special control, using the basis of the rights of full responsibility for the level of "Fas";

- special attention is paid to the specific definition of the qualitative and quantitative composition of the society at the initial stage and in the future for each territory. The functions of each territory determine the entire list of operator specialization, taking into account the reserve of two or three generations (the orientation age of the reserve is 18-30 years). Additional special functions related to the processes of closed cognition, technical support of contact and communication with the Control System, research technology centers (under special regime conditions) are assigned to individual territories. Such complementary functions are subject to closed additional passport certification, and their financing is determined separately and independently, by direct determination from the KRU.

- some additional territories will have narrowly profiled functions, i.e., the formation and provision of only specialized services that are not related to the process of material production, i.e., without the creation of material goods. These territories will be determined by the profile of functions, to organize and provide: general education and specialized training and education centers, centers for psychophysiological rehabilitation and restoration of health, specialized centers for the preservation and development of culture and art, centers for cultural recreational leisure and education, etc. The formation of this can only be in those territories that will be accompanied and provided with the System and its objects additionally, by creating a special state of the environment that increases the capabilities and abilities of the body and its brain to perform all the necessary things that a Human needs for this at such a time;

- territories that will not be accompanied by life support conditions for a certain period of time are subject to separate passport certification. They will be designed for complex

processes of adaptation and restoration of the true flora and fauna of the planet Earth. Humanity will carry out certain works accompanying this process, but permanent residence, the formation of ways and forms of being in these areas will not be available until a certain time. In subsequent periods, such areas will be accompanied as protected areas for the improvement of the planet. All issues of organizational and management activities with all the necessary support for them are formed in the same way as for other territories.

The rest of the details of everything related to the passport certification are carried out during the execution of the work.

[The basic foundation of management.](#)

Territorial-functional model of a complex economic system (the Economy), as a new economic basis of a fundamentally new Financial system of Humanity, as well as new structural and functional subsystem levels, in conjunction and cooperation with the new subsystems within Structureless power, is a complex single social tool of a fundamentally new type – Humanity requiring special organizing and managing capacity.

Realizing this, as well as the truth of the upcoming processes of change and, accordingly, the extreme need for the concentration of managerial and organizing potential, only one option is possible – *Autocracy, carried out in the form of Presidential Rule* for a period of at least until the end of the transition period.

All the guiding and organizing principles in such a difficult period can be fulfilled only through unity of command, as the only organizational form of leadership of the Structural Power, in which one official is at the head, authorized by the Conceptual Power alone to adopt legally binding management acts.

[Form of integration.](#)

The only form of integration for the implementation of the Strategy of an Expedient Balance of Economic and Social Development of Mankind and the introduced Territorial-Functional Model of the integrated management system (Economy), as the leading subsystem of a single new social instrument, can only be - *redistribution*.

Redistribution should be organized on the new principles of the entire Economy, i.e., newly rebuilt accounting and reporting with the active participation of elements of the social subsystem - Structureless (Public) power.

The interaction of Structural and Structureless power to form and give new functions for such a form of integration as *redistribution*, is nothing more than overcoming a previously unsolvable problem by any of the societies – [the acquisition of material goods, services and universal recognition by Humanity - according to the Mind, as the highest degree of justice](#). This means that the acquisition of the social position of each individual in the structure of a social organization – Humanity, will completely depend on the conscientiousness and practical results of the fulfillment of the functions assigned to the individual and assigned to him from above. The recognition of his true social position can be accepted and is only within the framework whose powers are in the sphere of Structureless (Public) power and under the control of the System. In this, the highest harmony of Man and Humanity will be manifested, while any behavioral tricks, clan and coalition and other currently flourishing perversions of unscrupulous

morality are excluded. The whole system of redistribution, a form of integration involving Structureless power, is formalized in more detail in Part 2.

The behavior of people, as a product of various social institutions in which people grow up and are brought up, is predominant in comparison with the fruit of the inner nature of people. In infancy, everyone is equally good, like angels from heaven. And what happens then? And then there is a gradual grinding of life through the millstones of life of public institutions, the totality of which was built within the framework of the program of the old System. With the help of a wide variety of such institutions, power was structurally rebuilt at all stages of the development of civilization.

The old program is over. The new System, as part of its program, creates fundamentally new institutions of social and other relations, a new structure of a single social organization with different goals and functions. One of the new social tools will be the creation of a social subsystem - Structureless power. Along with other subsystems, with its help, a harmonious balance will be maintained between the introduced autocracy of the Structural Authority for the organization and management of the Human Economic System (Economy), as an extremely important sphere, on the one hand, and, on the other hand, the new functions of the remaining subsystems in the structure of a single social instrument – Humanity. Most of the functions of organizing, managing and influencing the efficiency of these other subsystems are assigned to Structureless Power. Moreover, the structureless government is the main "customer" of material goods and services in the Economy and it also acquires an active social position in the system of implementation of the main form of economic integration - redistribution. A more detailed formalization of the functions of Structureless power is considered in Part 2 "Fundamentals of Human Governance".

The proposed concept of functional and structural formation will allow, in the most difficult conditions of the transition period and the ongoing fundamental changes in the environment and the change of programs, to build a basis mainly and finally for the creation of a single structure of a social organization - Humanity. This will make it possible to preserve human life on Earth as much as possible and will create the basis for a leap into the future of humanity.

3.3. Economy as the goal and basis of the unified structure of the social organization of future Humanity.

Before proceeding to judgments about **Economy**, it is necessary to emphasize the fact that the Russian language, of all existing today, has the highest degree of saturation of information density. In this regard, since April 2009, it has been adopted as by the new System as the program language of management and communication, within the framework of the new Program. At the same time, it is the most refined in the perception of material and immaterial images in their worldview and, in this regard, it is the most vulnerable. **It is powerful in word, but, in word, it is also vulnerable!**

The former President of the USSR, M.S. Gorbachev, with his irresponsible and unrestrained judgment, "The economy should be Economical", defamed the whole meaning

and wounded the true essence of the beautiful deep thought of the word "Economy". In the secular, i.e., generally recognized understanding of it, it contains an understanding and comprehension of thrift, saving, effective use and expenditure, rationality, search for the optimal and expedient, etc. There was also "Marxist Political Economy" as a science of the basic principles of the national economy, which tried everything to transfer social relations to only the economic sphere and through economic development to abolish commodity-money relations, considering this the main task of a bright future. Let's not evaluate the past.

What principles and thoughts do we envision in the basic concept of Saving Humanity:

3.3.1. Economy of Humanity is a way of searching for and develop optimal non-traditional integrated solutions in a dramatically changing environment.

A general overview, with a permissible degree of tolerance, presented the causes and nature of energy and structural changes in the environment, the physical bases of the occurring processes, their necessity and inevitability, the future scenario concept of stage-by-stage consequences of the current and subsequent states, etc. The processes taking place in a very short time will change the world around us, people will for the first time encounter such changed conditions of habitation, in which they did not have to exist, form and organize the ways and forms of their existence. Complicating the emerging circumstances in the future will be the manifested inefficiency and significant limitations in the application of all technological achievements of the current civilization on previously mastered technical solutions that have been acquired and successfully applied in previous conditions.

This will occur as a discrete outcome of all changes and the conditions that follow them, each of which, in turn, will significantly affect and lead to the need for a sudden choice of optimal paths and corresponding solutions to actions in extraordinary conditions that will lead to certain events. But who will assess the correctness of these decisions in conditions of the extreme scarcity of time?

Moreover, all this will and should happen in such a way that decisions and subsequent actions leading to specific events in society or with its participation, do not go beyond the Goal Vector of the new Program. This is such a sphere of decision-making in a rapidly changing environment and a shortage of time, the price of which are the lives of people on Earth. This is the main requirement, from the point of view of responsibility, for the managing and organizing level. **Not to gain power as an end in itself, but to be responsible for decisions, actions and their consequences.**

In this regard, Humanity's **Economy** is a **special state of governing and executive interaction** of the entire unified structure of a social organization. It is only in such a state, that the potential of a concentrated unified governing and organizing function of Structural power, should and can find full adequate support and active counter-support from the rest of the social subsystems in the name of finding optimal solutions and their prompt execution, by all participants of the social organization.

Thus, the **Economy** of Humanity is a **set of actions and judgments** to find and make optimal decisions, as a governing and organizing process in the formation of harmony of all

subsystems of a single social instrument of Humanity. It should be focused on the preservation of people, giving organizing active functions to all socially active elements of society for the guaranteed creation, acquisition and distribution of material goods and services in the most difficult conditions of the transition period. The **Economy** of Humanity is the **only tool for organizing expedient and prudent management** in conditions of unconventional constraints and extreme time constraints dictated by the circumstances of the Goal Vector. This is such a management tool, when each applied unit of resource should ensure the receipt of the maximum, manageable and controlled through the distribution of the volume of material goods and services. The management of this process of economic efficiency is entrusted to the interaction of Structural and Structureless authorities. This interaction should be entirely focused on the Economic Strategy of the organization of a **"Reasonable Balance of Economic and Social Development of Mankind"**.

The **Economy** of Mankind is the **harmonious interaction of all subsystems** of a single human social organization: Structural power; value-integrative subsystem; culture; the Economy of Mankind and a new subsystem of Structureless power. Each subsystem, being itself in turn a complex social tool of a functional and structural organization, should aim by its being and practical results at interaction and mutual support to give the necessary and controlled activity to each of the other subsystems.

The **Economy** of Humanity is the **organizing principle and goal of human social organization**, it is a state in which, for the first time in the entire previous history of all societies, the issue of social justice is being resolved: the provision of goods, services and social recognition according to the Mind, and not for money or illegally acquired power. This is the true harmony of Man and Humanity.

3.3.2. Economy of Humanity excludes the existence of political power in the previous incarnation.

Political power as an instrument of the manifestation of the power hegemony of an unfairly singled out minority and independently determined for themselves, the preferential social position in society relative to the majority, is a complete atavism for Humanity, as a society of equals, as a society of constituent functions from each and everyone. It should certainly be recognized by all figures who aspired to power in the past that it was political power in its previous incarnation that was the main source of generating social injustice, no matter what slogans it was covered with. This even applies to the period of socialism in Russia or China, since everyone personally knows and remembers the presence of "especially red party cards" from communists who fought for "equality and brotherhood of all peoples." It was the political power in all its diversity of past incarnations, whatever they were called and whatever goals they emotionally spewed out – they were the ideologists and organizers of the ultimate egoism of the whole society, achieving their preferential social position by force, using all the negativity of the violence of that time over the majority.

In Humanity, as in a single structure of a social organization, the level of social status acquired by each person is determined by two factors: the personal functions of a person

according to his true purpose on Earth and the practical results of this embodiment achieved by him, first of all and necessarily recognized by the primary social cells of Humanity. The highest recognized merit of each person, as the primary principle in a social organization, is the right recognized by Humanity to be part of a Structureless government.

In the changed environmental conditions, provided that the life time of a human is increased by almost an order of magnitude, i.e., up to 800-1000 years, this acquires an incredibly high significance, as a fair incentive and as a way to find harmony between Man and Humanity. To be recognized as part of a Structureless Government is not an honorable right to have a preferential social position. This is a well-deserved and recognized social position, i.e., the voluntary consent of the other members of the social organization with such a well-deserved social position of the individual. Not to be confused with membership in any political party, since this atavism, as a parody of negative social cells, also excludes the right to exist in Humanity in the future. There will be no more parties, the acquisition of a parasitic special social position in an unrecognized way will be considered and recognized as a special crime before the entire social organization - Humanity.

The exclusion of political power in its previous incarnation, together with all its party attributes from the past and their past attempts and irrepressible aspirations for the force of power and the force of money, is carried out through the introduction of a social subsystem - Structureless (Public) power. **It is given special functions – to be a balancing tool in the process of managing society under the conditions of the autocracy of Structural power.** Structureless power embodies its functions through representatives recognized by Humanity, whose social position is deservedly recognized by the social cells of Humanity. This completely excludes the basic foundation of extreme egoism, possible attempts to revive and manifest the former pseudo-electoral systems. The recognition of the highest social position of each Person and the acquisition by him of the right to represent the whole of Humanity in Structureless Power is the highest reward and assessment of Human existence.

3.3.3. Economy of Humanity - the basis of other principles of definition and evaluation of values.

The modern era is characterized by profound upheavals and bereavement. But this is by no means all that can be said for the future in this sense. Today's society, in the simplified aspect of judgment, has almost lost its higher values. The reasons for the loss, at the level of secular judgment, are commonly identified as the loss of traditional notions about values, as such, in the system. Traditional notions of truth, goodness and beauty have been lost, moral and ethical norms are losing importance for people in the sphere of choice and organization of ways and forms of being. But these are not causes, as society now confidently assumes, but consequences. For the causes lie in something else entirely. They lie in the stopping and subsequent elimination of the entire complex management of program processes, artificially established on the Earth by outside interventionist influence. Management has been liquidated, including the activities of people within the framework of the old Program, which lasted for several millennia.

However, it is necessary to pay tribute to many thinkers of the past in their research approaches and opinions on the issue of values. In the past, all philosophical research related to the definition of value, was consolidated into a doctrine - "Axiology". Many theoretical conclusions and definitions will be relevant in the future, they are far from devoid of a reasonable approach. The question is different: what should be changed and how to change the approach to values and the assessment of values in the Humanity's future?

In the future Humanity, the philosophical concept of value, as such, will be preserved, and in the general plan, it will continue to refer to the [property of the object](#), which must satisfy the [desire of the subject](#). Each object has certain properties that satisfy the desire or will of the subject, and is recognized by the subject as meeting its requirements. This special property of an object is called [value](#). Thus, value is something that belongs to the object. It becomes real only if the subject recognizes it as such. In order for the value to be designated, the subject must recognize the property of the object and evaluate it as having significance.

[Until there is a desire of the subject to recognize the very fact of his satisfaction, no material goods and services have any value.](#) This is an extremely important moment and condition, with the help of which and through their influence, program management processes were carried out in the actions of individual people and their communities, in the sphere of the entire organization of ways and forms of being throughout the history of the last millennia. A sufficient example and proof is the incredibly magical influence of gold and its intervention in all defining aspects of the ways and forms of human existence. The same story with hydrocarbons, they have acquired the externally imposed function of a reversible substitute for determining and increasing most of the current derivatives of money, only with the receipt of such a command from the Management System. [Yet, so it was and it's all been stopped!](#) The remaining details in this case are not relevant yet, they are in Appendix 1, Chapter 3.

People's self-discovery through communion with everything Humanly moral - was considered as the true meaning of human life. Objectively, we admit that it didn't work out, basically. What needs to be changed to bring the meaning of a Person's life to a new level?

[Fundamentally change the value orientation of Humanity](#) - as a complex sociological process of a single structure of a social organization, with an active social position and full interaction in the work of all social subsystems.

This work should be based on a new value strategy: ["The transition from Person of price to a Human of value"](#).

[Person of price](#) – the embodiment of the archaic, naively egocentric within the personality, a kind of clearly expressed self. Price for them is everything, even a goal in life. This is the most important characteristic of everything in the world, the world for them consists only of things, because, apparently, the only living, irreplaceable and priceless thing in the universe for them is their own I.

[Man of value](#) – what is necessary to become, a human of true intelligence who has received a different brain and a higher level of knowledge. In the process of transformation, there will be a lot of things in the world that cannot be found of equal value, not because they are most expensive, but because they are unique, irreplaceable, individual, self-valuable, and

created by the System to find true harmony. This is the natural objective value. Man can only be with it, but not be a subjective root cause, according to which the object must necessarily acquire a price. There are more serious subjects besides a person, who will be able and will find such an opportunity to attach price and value to the world around us.

The goal in the implementation of this value strategy is a [harmonious coincidence and a complete harmonious target orientation](#) of the Value Stereotypes (VS) of a Man as an identity with the Value Ideal (VI) of Humanity as a single structure of a social organization.

The development of the entire volume of Value Stereotypes for all social groups, united by close functions of their purpose as a Human on Earth, is the most important stage of the work of all social subsystems. It will require a revision not only of the entire complex of necessary moral values, but of the entire complex of values in general. This is the most difficult work, coupled with the simultaneous process of changing cognition and transferring it to a higher level.

Man is not a passive object of his own value regulation, but a subject who will be able to evaluate his own values at a higher level of true cognition, in accordance with his personal well-deserved social level and will be independently able to project in his imagination his own movement towards new values that differ radically from the current ones.

To do this, the Economy of Mankind, as a state of the system that ensures the implementation of the Strategy of the Economy with the active participation of all subsystems, forms Value Ideals for all Mankind as a single social structure.

A separate issue is the value strategy in the Human Economy. It is quite sufficient to be notified that the basis of the value strategy is based on a completely different management, fundamentally different from management and design in its manifestation under the previous structure, methods and forms of being. The base definition of the volume of values, their substantive essence, purpose, application and provision for use, including the issue of all derivative money – is not the subject of discussion within the framework of the topic under consideration. Suffice it to say that all types of substitutes, rules and rights of treatment with them and to them, the construction of a fundamentally new System of Finance, the laying of world finance - do not cause any ambiguities. This issue has already been determined by the KRU structure assigned for this. For Russia, there will be no problematic issues about the consideration of borrowed and other external financial resources for the implementation and embodiment of not only the strategy of the Economy, but also the construction of the entire unified structure of the social organization - Humanity.

The true history of the development of the Financial System and the substitute used, hidden from humanity.

The history of the development of the financial system and its corresponding structures are directly related to the management processes carried out by Management Complexes. The outflow of these processes has seven stages. The whole sequence of their actions accurately reflects the process of development, not only of society, but also of the Management System of the society itself. As it develops, the System creates appropriate territorial servers and terminals that accompany and manage all processes for the organization and development of ways and forms of human existence, including the formation of the financial system. Territorial legends about the appearance of life and man, figurative legends, confessional definitions and methods of involving the World's population in new current developments, are being developed, etc. It should be emphasized that each complex formed specific zones of territorial coverage for itself and under its management, through the created management servers, the places of human settlements were determined, along with the definition of the entire infrastructure and social structure of societies, etc.

The main stages of these processes are:

№	Years		Management Complex	Nt	Z,%	ZK	ZK*	NZ,%
	From	To						
1	-12400	-8200	China, Sichuan	33	2	-	16	3.5
2	-8200	0	Kailash-2, Pakistan	5120	15	56	16	7.1
3	0	700	Caucasus, Ararat	8110	37	64	64	17.4
4	700	1115	Andes, Nazca	241	49	124	94	23.1
5	1115	1552	Alps, Northern Italy	633	74	228	132	44.8
6	1552	1898	Alps-2	1264	100	628	224	66.2
7	1898	2008	California	9116	100	3126	336	88.2

Nt – Number of terminals installed during the period of operation (the first Orthodoxy - on Mount Ararat).

Z - Territory of the Earth covered by control and fairy tales (in %).

ZK – Number of control probes - UFOs (* - manned vehicles).

NZ - Percentage of the controlled population of the Earth (they tried to destroy the rest).

Types of legends determined through established control frequencies:

№	Complex	Octave	MNK	Title Image	Type of Religion
1	China, Sichuan	16	12	Buddha	Buddhism
2	Kailash-2, Pakistan	22	12		Islam
3	Caucasus, Ararat	34	48	Jesus, Allah	Orthodoxy
4	Andes, Nazca	28	12		Catholicism
5	Alps, Northern Italy	42	124	Virgin Mary	Catholicism
6	Alps-2	56	228	*	*
7	California	60	1248	*	*
Total:			1684		

(Additional control mantissas are inserted into the frequencies.

NMK-Control mantissa number;

*- formation of directions (variants of religious legends);

In order to meet the requirements and conditions arising in the process of forming and improving the structures and functions of the emerging societies, Management Complexes carried out, quite covertly, work on the formation and training of people to use various types of substitutes that initiated and developed the system of value definitions. This especially and significantly influenced the structural improvement of societies, the division of people into social strata and the introduction of elitism, the organization of specific management systems (economics), the conduct of elementary financial systems, etc.

Step-by-step formation of a substitute:

№	The complex	Start date	Substitute type
1	China, Sichuan	-17200	Iron
2	Kailash-2, Pakistan	-16000	Precious gems
3	Caucasus, Ararat	-15330	Gold
4	Andes, Nazca	-12600	Silver
5	Alps, Northern Italy	-10700	Gold, platinum, isotopes
6	Alps-2	-6600	Gas, oil
7	California	-3000	Gas, oil

The formation of the substitute of the future was carried out by the Complex - Australia. Note that the formation went on continuously for the intended use and possession, in the future, of the entire prepared volume of the "golden billion".

The concept of substitute was introduced not so long ago. On a secular and everyday level, a substitute is a substitute for something, a security for something. To what extent, for example, can gold be a substitute?

Gold.

Gold was obtained from isotopes of uranium and what is considered to be a stable element in the periodic table, is actually an isotope.

The initial purpose of gold:

- fuel element bundle (fuel element - energy-generating module);
- label of the biostructure, which must be under the control of the System (rings, chains, medallions, earrings, gold embroidery, etc.);
- covering ritual places of mass gathering of biostructures (mainly churches);
- technological application in the field of electronics;

If gold has an octave bundle of 32 - 53, then instruments can detect the presence of alpha, beta and gamma radiation. If the bundle has a reduced potential, there are no devices to detect these radiations, but there are radiations themselves.

Gold is an excellent conductor for electronic circuits, since the gravitational potential of the octave bundle 31 - 53 is set to maximum, unlike other structures. Gold, as a marker for biostructures, has an octave bundle 32-42-53, which allows the brain of the atmosphere to track "its" biostructures. If we assemble a sheet of gold according to the scheme of a three-volumetric figure (rotation of the curve of the negative shape of hydrogen along the spectral lines of gold), we get a "pump", which, on the one hand, collects from the brain of everyone who is in the church everything that they have (after visiting the church, everyone has a clear and clean head).

At the same time, this "pump", from a depth of 1,200 meters, pumps everything that is accumulated on tires under the dome. Gold is used thoughtlessly as a substitute, since it is an isotope that can turn into lead at any moment according to the scheme:

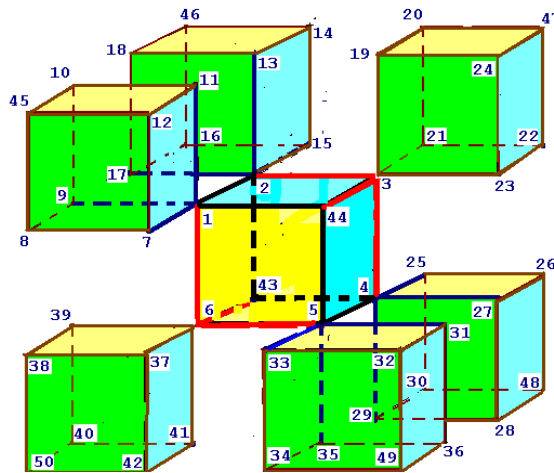

Au-> U-> Pb.

In total we have 24 "stable isotopes", each with a lifetime of more than 4,000 years. All isotopes have an initial (original) frequency structure and initial matrix. According to this initial matrix the characteristics of gold are compiled, but they will be changed (unnoticed by others) with a specific use. So, if gold is used for technical purposes, the octave bundle of 31 to 53 will be permanently pumping. The combination of bundles gives a specific use, making gold a versatile technical material. However, when determining the value of a gram of gold, that value depends on the type of bundle, i.e., there is an energy value (which has never been guessed at). The value of gold is determined by the original matrix, but this value varies depending on the use of the gold.

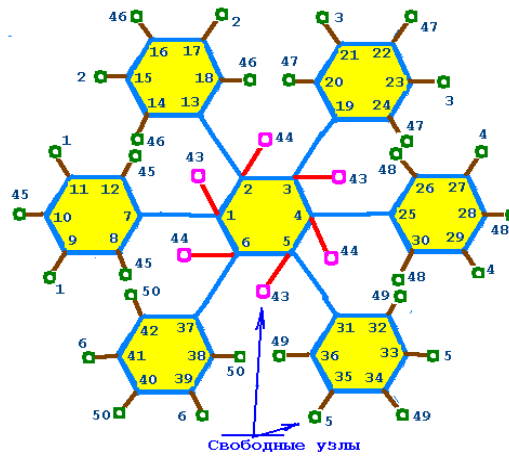

Thus, gold itself is a commodity and has a floating gradation, which is why it was chosen as a "floating" substitute for the purpose of taking value away from everyone who is not part of the "golden billion".

For these purposes, a system of relationships was formed, in which the "craftsmen" of the Control System itself took a direct part, using the capabilities of the complex of Australia, the "computing center" of Ireland, the working complex of the Alps and the entire created composition of the "golden billion". Note that the atomic structure of gold is close to the atomic structure of the brain cell of the "ebrov" and "golden billion":

Кубическая решётка золота

Бензольная структура золота

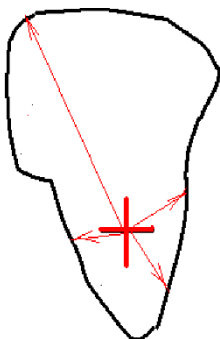

Кубическая решётка золота - Cubic grid of Gold, Бензольная структура золота - Benzene structure of gold
Свободные узлы – Free nodes

The information cube is framed by 6 cubes that are part of the dodecahedron.
 Therefore, the main use of gold is as a biological label.
 Consider the Flerov table (Dubna).
 Au is element 79, atomic mass 196.9665, 29 isotopes.

Indices	Type of decay	Lifetime	Number of isotopes
175 - 179	σ	< 1 – 7.2 sec	5
180 - 196	$\gamma, \beta^+, \epsilon$	8.1 sec- 6.2 day	17
197	$\gamma=98,8$	“stable”	
198 - 204	β^-, γ	28 sec - 2.7 day	7

Note that all 29 isotopes are part of the "stable" element and show their properties when the total potential of the structure and gravitational potentials of individual nodes change.

Like all known chemical elements, gold has its spectrum measured in the 31st octave (civilized mankind has no other possibilities, and it is impossible to measure separately the spectrum in the 41st octave).

Using the properties of symmetry (18 axes and 6 broadcasts), we obtain a contour with the same radiation density with a center (indicated by a cross). Oddly enough, this corresponds exactly to the continent - Africa. In addition, there is the world's largest gold deposit in the area marked with a cross. Using the contour and a number of additions to it, as well as changing the scale, you can find all the Gold deposits on Earth. They are scattered all over the Earth and are always located strictly above the meridian tires.

Information about deposits is provided, and geologists who have a connection with the System can easily find them (as they say - "by smell").

In microdoses, gold is present everywhere – in seawater, in every cubic meter of Land. This "micro-gold" has a greater affinity for the atmospheric brain than gold from deposits. The gold extracted from the deposits is subject to remelting, while only the original matrix remains, but if you take gold from the deposits in California and in western Siberia before remelting, they will have different characteristics, despite belonging to the same stable element. For some reason, no one notices this property.

Can gold be a stable element? **NO!**
 It's not meant for that!

You can hang all the clergy with bars of gold, insert a bar into their ears, nostrils and other places, and in the eyes of the parishioners they will receive all the Program documents without waiting in line ahead of time. Lack of intelligence was sometimes supplemented by gold, all the well-known expressions are built on gold - "golden mean" (there can be no other mean), "golden age", "golden boy", "golden horse" and so on. Copper and bronze are also variants of gold, but when creating the cellular brain of the "golden billion", these structures were excluded. The control structures created on the gold substitute are given in the appendix.

Iron.

Iron and its alloys are the main technical material. According to the Flerov table, we have:

Fe - element 26, atomic mass 55.847, 12 isotopes.

Indices	Type of decay	Lifetime	Number of isotopes
49 – 53, 55	γ, β^+	75 msec - 2.7 year	6
54, 56, 57, 58	$\gamma = 2.25 - 2.63$	«stable»	
59 - 64	β^-, γ	< 1 sec - 10^5 years	6

Unlike gold, there is no doubt that iron is an isotope, and the presence of an isotope at γ, β^+ decays with a lifetime of thousands of years is nonsense. In a pure (stable) state, iron can only exist under conditions of constant pumping along the octave 55 (this is not an atomic number). The iron pillar in India has such a pumping. This is a standard that cannot be achieved in other places. Iron was created as an element for existence in an alkaline environment; it is destroyed during oxidation. The iron pillar in India cannot be counterfeited, it cannot be transported, and it is an example of a substitute (the only one on the entire Planet). Creating conditions (along the octave 55) will allow having a standardized reserve of the equivalent that will be needed. The main feature of stable iron: it cannot be counterfeited.

Iron is the basis for building biological structures, iron isotopes (ions) are the basic structure in the blood, they do not rust there and live exactly as long as necessary. That is, **unlike gold, iron has memory**. The atomic structure of iron includes blocks of tetrahedra (memory, and at the octaves 33, 36 and 42).

This property of iron is used in engineering, but it is extremely harmful when using iron as a substitute. During the development of society, there was a stone, bronze, golden age, but there is no iron age, although iron was present everywhere.

Precious stones.

Precious stones include everything that looks beautiful, and in some cases, even, as it were, seem to cure all kinds of diseases. Not all precious stones can be used for cutting nuts, but if you need to drill something, then first of all use diamond drills. In scientific circles, even a special field of knowledge has been identified - mineralogy, where everything that is known not only about precious stones is dumped. Just as in metallurgy - the main task is to destroy the original properties of metals by melting and "refining" them, in mineralogy - this is the aesthetic value of the mineral and its ability to drive away flies. Each mineral is a structure that contains a set of frequencies intended for control (1,684 frequencies). The maximum number of frequencies in a mineral is no more than 6 (as a rule, these are octaves 22, 28, 31, 34, 41, 53). Since the purpose of the mineral is control, it is impossible to choose a universal mineral that would satisfy the conditions of the substitute - to be in sufficient quantity and that could not be reproduced by technical means. Let's consider diamond separately, or, as it is commonly called, "carbon".

Currently, diamonds are used only as decoration (jewelry) and for technical purposes.

According to the reference information, the practice of opening diamond tubes, in the opinions of experts, are processed on a defective plane that is not an optical axis. The "cutting" of a diamond, when transforming it into jewelry, is carried out without taking into account the presence of optical planes. No one has ever calculated the energy parameters of a diamond. At the same time, when studying AIDS in the USA, the concept of "loss of negative electrical potential of the human body" was introduced. In Russia, in particular, since February 1996, deaths with this diagnosis have been known.

The only mineral that has a colossal density of negative electric potential is diamond, [but only when cutting it along the optical axes.](#)

The new quality of the diamond should also affect its value. There is a "corridor" for the negative electrical potential of the human body, and the use of diamonds for medicinal purposes should also be reasonable.

[Deposits of natural diamonds](#) are found only in kimberlite pipes. We can report that according to the true estimate, the number of diamonds on the Planet is [260 million tons.](#)

Using the new theory of symmetry, the mathematics of "kaleidoscope", it is not only individual deposits, but also entire continents that are calculated from the spectra. The spectral contour of South America exactly coincides with silver, and the center is the world's largest silver deposit, the contour of Africa - with the spectral contour of gold (and the center of the contour is south Africa), the contour of Australia is the spectrum of bauxite, and the most interesting thing is that the contour of Antarctica exactly coincides with the contour of coal. However, the recalculation of the contour according to additional information indicated the presence of diamonds, that is, the contour of the continent coincided with the energy of diamond.

It should be taken into account that the electric axis of the Earth passes through the South Pole (the first cold pole), the second pole of cold is Verkhoyansk. The Verkhoyansk region is also a major diamond deposit.

Diamond plugs act as a capacitor, but their production, of course, is not permissible. In addition to "plugs", there are enough places of concentration of diamonds. They are not scattered in bulk on the Earth, there are more than 260 million tons of them, but only in certain places. The calculation of such places is carried out using the energy characteristics of the diamond, the calculation methodology is available, while the participation of geology is not required, the accuracy is perfect.

The pentagrams of the location of kimberlite tubes can be calculated based on the Earth code - 512 with a base of 64. A pentagram is an irregular 5-angle, all pentagrams are the same in shape, but different in size. The smaller the size, the higher the octave state of the diamond. If we take the octave state of 32, then relative to it, the octaves of diamonds in various deposits will be different:

			Relative potentials of the electric field		
№	Deposit	Octave	Negative	Positive	Negative potential return, %
1	Antarctica	34.628	1	1	100.00
2	Yakutia	33.673	0.0071500	0.12700	1.6
3	Australia	33.246	0.0008150	0.07160	0.045
4	South Africa	33.138	0.0005630	0.05820	0.00061
5	Arkhangelsk	32.773	0.0000024	0.00463	0.00000002

There are diamonds in Ukraine too, but this is transparent graphite.

The corners of the pentagram coincide with the contour of the intersections of the electric, gravitational spirals and the magnetic meridian. The total number of pentagrams is 728. If we take the electric axis of the Earth and draw a plane perpendicular to it through the center of intersection with the gravitational and magnetic axes, then the number of pentagrams north is 364, and south is 364. But the northern pentagrams are more compressed to the north and stretched to the plane, the transition to the southern is uniform, the southern pentagrams correspond to the contour of the Earth, and the compression is on the electric axis.

[Physicochemical properties of diamond.](#)

Diamond No. 1 is taken as a basis.

№	Name		Combustion medium			
			O16	O17	O18	O19
1	Specific gravity ρ/cm^3	12.4				
2	Refractive index	6.4828				
3	Angular dispersion	0				
4	Reflectivity	0.0048				
5	Strength Gpa	9648				
6	Electrical resistance, om	10^{24}				
7	Monolith size m^3	36 - 39				
8	Combustion temperature ^0K	1216	962	988	992	1062
9	Negative electric potential B/M^3	0.640				
10	Positive electric potential B/M^3	0.084				

The color of diamond.

The chromaticity of a diamond is a derivative of its energy state. When the appropriate charge is applied, the color scale shifts.

№	Color (№ 1)	Octave	Charge B/M^3 , %	Charge density ampere/ M^3 , %	Number of optical faces (maximum)
1	Black	34.628	100.0	100	1024
2	White	33.677	88.4	42.8	512
3	Yellow	33.673	64.24	2.64	256
4	Cyan	32.674	56.25	0.43	128
5	Blue	32.773	49.16	0.023	96
6	Violet	33.163	31.75	0.00054	84

7	Green	33.883	20.60	0.0000083	72
8	Orange	33.063	14.21	0.0000000036	64
9	Red	31.833	7.45	0.00000000011	56

The search for diamonds is based on the principle of superposition of the charge equivalent of a given frequency. The depth of diamonds is from 2 to 12,000 meters. The method is contact, from the surface of the Earth. Before searching, it is necessary to have a map of the region taken from a satellite in ultraviolet.

The processing is based on the softening principle found for granite processing.

All the faces to be processed can be calculated if the main energy axis is found. Relative to the main axis, the total number of faces is known, and it is always possible to make an optimal (in terms of beauty and energy) processing scheme.

Experiments on changing the color of diamonds were carried out, using magnetrons and special lighting led to a change in the color of diamonds, but did not solve the main problem - an increase in the density of the negative electric potential.

Diamond is directly related to the tire, as it contains the entire set of frequencies located on tires. It can be used as a substitute, but only the Antarctic one - as a reference.

All other diamonds can be reduced to a scale based on the relationship $y = \text{Log}_2x$. All known diseases that royalty was susceptible to were treated by wearing diamonds, and any medicine could be consumed without harm to health. Correct cutting of a diamond (not into jewelry) allows you to preserve all its properties regardless of its location.

Artificial diamond is nonsense – it is impossible to create a diamond with an octave higher than 31, and the product obtained even with the use of a nuclear explosion (resembling corundum) can only be used in tools. Antarctic diamond is promising as a substitute.

Silver.

Unlike all currencies that are based on paper dye derived from minerals, silver is part of the pound (England). Therefore, silver, together with the control frequencies made up of minerals, is under constant monitoring of the Control System.

Silver has a lattice structure close to the human brain and is intended to be preserved only in an alkaline environment (like Na, from which it is obtained).

Ag – number 47, the atomic mass of the stable isotope = 107.868, the number of isotopes = 27

Indices	Type of decay	Lifetime	Number of isotopes
96 - 106	$\gamma, \beta^+, \epsilon$	5.1 sec- 127 day	12
107, 109	$\gamma = 30-45$	“stable”	
108, 110 - 123	β^-, γ	0.39 sec - 249 day	15

Having two stable isotopes in the deposits we have: (107 - 51.83%, 109 - 48.17%).

Atomic block of silver has different directions of tetrahedron axes, that is why silver cannot enter biological structures in its original form - a pair (dumbbell) is always needed. Silver is also present in seawater and in every cubic meter of the earth, the silver spectrum has a simple shape (according to the energy lines of the same density) and the contour of these lines is the continent of South America. There in the center is the largest silver deposit in the world. Smaller forms are scattered all over the earth. Silver has a number of miraculous properties. The first is that as an element capable of sustaining an energy surge of up to 139% at the 41st octave, it is a marker in medicine. The second is that as an element with a lower threshold of less than 2%, it converts to mercury, which has poison properties for biostructures (therefore, it is not acceptable to use silver in biostructures). Third, silver has the property of changing the ratio of frequencies, for example in water. Changing this ratio makes it impossible for frequencies to exist in water that the biostructure does not have.

CONCLUSIONS. Silver is an ideal means of **forming a reversible substitute** with a given lifetime. Example. The presence of a substitute for a given value is announced for a period of 1 year. After the expiration of the term, all financial transactions using this substitute are no longer **valid and cannot** be restored. Using the properties of silver isotopes, it is possible to obtain an alloy with a given lifetime. In British pounds, this property is not used, it is left for the future.

Platinum and other precious metals.

The entire group of precious metals are additives to fuel rods and are supposed to be used after the transfer of power plants to the surface of the earth.

Pt - element 78, atomic mass 195.08, 34 isotopes.

Indices	Type of decay	Lifetime	Number of isotopes
168 - 178	σ	< 20 sec	11
173 - 189, 191, 193	$\gamma, \beta^+, \epsilon$	0.8 sec- 2.1 day	19
190, 192, 194, 195, 198		“stable”	
197 - 201	β, γ	28 sec - 2.7 day	4

The structure of the dodecahedron is zeroed, the 53rd octave is active. It cannot be used as a substitute; a promising use is a fuel cell.

Of all the above, we note:

- only one element, and that is located in India, is not subject to transmutation;

- all precious metals are additives to the fuel cell, although they are slightly compatible with the structure of the brain, but this property is used in UFOs when moving in non-material structures;

- precious gems have the purpose of markers in medicine.

All countries currently use fuel cell additives (fuel rods) as a stable substitute.

A substitute with variables and temporary ones that have only [identification as a substitute for a trading index](#) should include:

- fuel masses - coal, peat, wood, gas, oil;

- works of art, scientific developments;

- technical products;

- food products.

Gas, oil.

Let us consider this particular type of floating substitute separately, because it is on them that the activity (more than 90%) of all banking structures is built, for the bloated build-up of the "accounting of the supply of electronic money".

Gas.

We know from chemistry that the gas formula CH₄ is methane, which is used as a raw material in the chemical industry and as a fuel. To extract it from the bowels of the earth, preliminary purification and processing, and pumping it to other regions, major companies have been created. This is the "gas needle" on which the "golden billion" sit. Gas is not just a raw material and a fuel; it is a policy. If you shut off the gas pipe that feeds any country, then this country ceases to exist until it meets certain political requirements. Otherwise, it will simply become impoverished and easy prey to the neighboring monsters of the same "golden billion". Gas can be liquefied and transported anywhere in the world. Sometimes the gas that is used as fuel does not burn. That is, there is a flame, but no heat. Then the gas suppliers are to blame. Gas is extracted from depths of up to 4,300 meters, both on the continents and offshore. As a rule, gas is adjacent to oil in the field. Pipes through which gas is pumped sometimes explode (gas also explodes in houses, but there is a reason - electrical wiring short-circuits).

It is customary to keep the finances received for gas in the country where the personal bank accounts of the "golden billion" are located, in order to maintain and secure the currency of this country. Gas, as a rule, is supplied to those countries that can consistently provide payments. Gas cannot be sold, for example, to Ethiopia, even if the temperature there is minus 50°C.

Oil.

The formula of oil is unknown, but the fact that it contains a valuable element – sulfur, makes it attractive. Oil is an oily liquid of black color. Oil burns well, is used as raw materials and as fuel (after appropriate processing). As a rule, oil is extracted from deposits (pumps are used). Not all oil fields are known yet, but there are hundreds of methods of searching for oil.

Unlike gas, oil has the miraculous property that there doesn't have to be much of it. That's what OPEC is for. All finances from the sale of oil and its products are kept in the same place as the finances from the sale of gas. Oil is extracted from a depth of 200 meters to 3,400 meters. White oil was discovered in the depths of Tyumen - a particularly valuable raw material for the industry.

Oil and gas have the property of a duplicate. Any gas field condensate has a twin - an oil field. Example: the Orenburg gas field has a twin - an oil field near Vologda (800 million tons), which the oil workers do not know about, they missed it when drilling using the checkerboard-nest method.

Most "good oil" is in Chechnya (it can be poured into the tanks of cars without processing) and in Asia Minor. Gasoline (of various brands) is obtained from oil for all types of vehicles, kerosene for airplanes, diesel fuel, asphalt for covering roads. The chemical industry cannot work without oil. Oil as a product must have strictly defined qualities, which determines its value. Oil is the equivalent of a substitute. If you have extracted 100 tons of oil, you can print 1 ton of dollars. Oil is always subject to processing, for this purpose plants with infrastructure are created.

When creating the atmospheric brain (from -2,200 meters to 12,400 meters), new frequencies were introduced into the initial structures of the atmosphere. This process began 2,000 years before the new era. The strictly symmetrical dodecahedra structure of atoms was destroyed (some connections with the icosahedron were removed). Each removal of such a bond led to the creation of a new chemical element. If we remove the dodecahedron completely, we get the icosahedral structure of boron. Since the basis were the octaves 16, 22, 28, 32 and 42, it was in these structures that everything was replaced. A certain combination of octaves 16 and 22 led to the creation of gas, and a combination of octaves 16, 22, 28, 32, 42 – to the formation of oil. White oil has the additional octave 47. In addition, the 53rd octave was inserted, as a result they received a "rattling mixture". But these combinations are intermediate and could not be used to form the brain, since they contained a neutralizer – sulfur. Sulfur is a product of brain activity (see sulfur in the ears), but it cannot be part of the brain. But this "explosive mixture" has one property – without it, it is impossible to make the transition to octave 56, which is extremely necessary for all representatives of the "golden billion", in case of an emergency when it is necessary to escape from a nuclear explosion.

After the completion to the octave 56, the "explosive mixture" was no longer needed, and was disposed of like garbage. The custom adopted earlier in Europe was used - all the garbage was poured out through the window into the street.

That is, all 18 Control System Complexes took part in the work of creating the atmospheric brain, the Caucasus Complex was the coordinator, therefore all the large and most famous deposits are around the Caucasus. Then the garbage began to be taken away - Tyumen, Sakhalin, Venezuela, etc. For the development of new deposits (Ufa, Kuibyshev, Tyumen) specialists were needed, and I must say, they all came down from the mountains of the Caucasus and were the first to realize that salaries should be received in potato sacks, not in thin envelopes.

In the future, they retained this habit for other activities. Since this garbage has the 53rd octave in its structure, it was proposed to use garbage dumps as fuel, for which the development of technology was made dependent on a garbage dump. The transition to the 56th octave had 2 stages:

- the first stage was preparatory, octaves 16, 22, 53 were used;
- the second stage was the formative one, these are octaves 28, 32, 42, 53.

Note that there is no octave 64, that is, there is no synchronization. The gravitational octave 63 is added to prevent debris from flying into Space. All existing deposits are the result of the formation of the atmospheric brain with the 56th octave. The maximum age of oil and gas deposits is 4,000 - 4,100 years and no tree deposits were observed.

The entire process of forming the atmospheric brain with the properties of the 56th octave was completed in 2000, which was called the year of the "end of the world". This was to be the "end of the world" for everyone who was not part of the "golden billion". On this occasion, in 2000, a banner hung on Tverskaya Street (Moscow): "Happy end of the world to you." However, the Program did not stop there.

The new program provides for the formation of an atmospheric brain octave to 71, while using a range of 4 steps:

1. Octaves 16 and 21 as clearing octaves.
2. Octaves 22, 27, 31 and 41 as the shapers of the lower tier.
3. Octaves 28, 32, 42, 55 as a platform.
4. Octaves 56, 64, 71 as a ready-made structure.

At the same time the amount of garbage increases tenfold. Instead of the 53rd octave, all stages are supplemented with octave 77, which exceeds octave 53 by millions of times in its combustion power. Of all the known methods of searching for oil deposits, approximately 88% of the methods use the frequency method, while the maximum possible frequency does not exceed the 31st octave. However, the garbage will appear, unlike the previous formations, only after the completion of the Program, which means that the places for future storage have already been selected, there are "tags", but there is nothing there yet, and **the drilling will prove an empty spot**. In addition to the base octave, the properties of octaves 18, 20, 24, 26 and so on were used. The 53rd octave structure was added to each. Therefore, when obtaining the spectrum, we have over 12,000 spectral lines, and therefore we can have to guess about the structure of oil, and it is impossible to use an unknown structure as a long-term substitute, therefore they strive to get rid of oil as quickly as possible. Oil comes to the surface in rare cases (it does in the Caucasus), finding and extraction is a rather laborious task. Oil development began after 1830.

Oil is an expendable material, but the finances produced from it live much longer. Oil and gas are an instant substitute.

If we consider the weight qualities of the existing substitute, then gold accounts for about 2%, silver - 0.01%, oil and gas - 98%. This bias is the cause of the financial crisis. It is not the banks that hold the hard-earned savings of the "golden billion" that need to be saved, but the substitute model, introducing the treasury as a tool for controlling the fixed substitute and

the Control and Audit Office as a System for retaining temporary substitutes, within the framework that does not lead to a crisis in the new financial system.

Removing the 22nd octave from the structure of oil transforms it into coal, while the 53rd octave is preserved (coal burns no worse than oil). Coal does not contain sulfur and is therefore more environmentally friendly than oil and gas. Therefore, as the 71st octave is introduced, oil and gas will disappear (if the 63rd gravitational octave is removed from gas, it will disappear in Space).

We note once again that all energy dependences of chemical elements are determined only by the state of the 53rd octave, and only γ decay is always considered. At the rate of 100% of the potential and 100% of the gravitational potential along the 53rd octave, we have the characteristics of the heat capacity that are given in the reference books. It should be taken into account that automatic control devices on Earth measure only the charge potential, but the charge potential is a combined value, it is possible to maintain 100% of the charge potential by changing the sliding angle and charge density. But in one case, the gas explodes, in the other, there is no heat transfer ("holy fire"). Let us consider some features of the presence of the 53rd octave in fuel structures (silver does not have the 53rd octaves).

№		VP%	Result	NP%	Result	PT
1	Gold	148	Au -> Pb	10	Dust	32
2	Diamond	164	C -> CH ₄ -> H ₂ O (Mist)	10	Black Zircon	22
3	Oil	132	Explosion	21	Cannot be ignited	32
4	Gas	124	Explosion	21	Cannot be ignited	32
5	Tree/Wood (aspen)	128	Fire	26	Cannot be ignited	36
6	Slate	144	Fire	24	Cannot be ignited	34
7	Vegetation	112	Fire	11	Cannot be ignited	36

VP – upper limit at which spontaneous combustion occurs

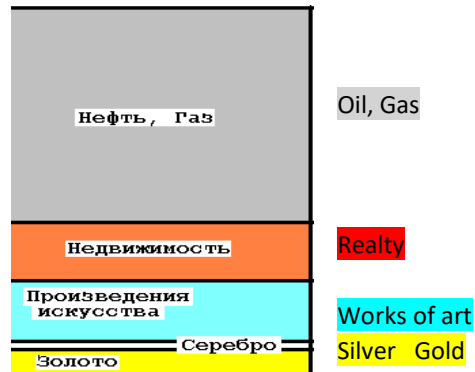

NP – lower limit for potentials of the 53rd octave.

PT - Heat transfer limit (hereinafter referred to as "holy fire")

The limit of heat transfer for gold is useless in electronic circuits (it becomes a resistor instead of a conductor), for diamond it becomes a vampire instead of a donor. The table shows the "ideal" ratios. However, the phenomenon of "holy fire" (spontaneous combustion and no heat transfer) is known.

This effect can now be obtained at any point (in 2007, it was obtained in apartments). That is, it is necessary to "skew" the charge potential so that at the same time there is an upper limit (spontaneous combustion) and lower limit heat dissipation. This is achieved by changing the sliding angle charge in the dodecahedron-tetrahedron bond structure.

Before considering financial management, let's consider some relations on a modern substitute.

The pre-Marx substitute included only gold (over 66%), silver (20%) and copper. Of course, there was no surplus value, their equivalents were printed on paper for existing stocks. It was possible to introduce a Treasury that would monitor the ratios of the substitute - a paper weight

With the advent of "Capital", a convenient form of theft appeared. There was a "surplus value", which in itself does not mean anything, but real estate and works of art can be used as a substitute for it and then "surplus value" can be standardized within the required limits, securing empty pieces of paper in the form of bills, receipts, obligations, loans for non-existent gold, silver, copper. The cause of the modern financial crisis is the Fed, created in 1914. At the first stage all was well, until 1927, until an internal crisis emerged. From then on, an external substitute began to be used in the form of loans to all who requested them, against the economy of the country being credited, but until 1954, the exchange was only for gold.

Since 1954, oil (or rather, the "oil needle", from which they still cannot get off) has been a convenient substitute. The distortion of the meaning of a substitute has not only led to financial crisis - it has led to a collapse. Of course, the first thing to do is to save the banks, where the "labor savings of the golden billion" are kept. It should be noted here that the entire substitute built on a temporary basis (oil, gas) is being sought to be transferred to a permanent basis - gold, therefore, inflationary processes are proceeding at a significant pace.

CONCLUSION

The generation currently living on Earth is incredibly lucky to be participants in a historical moment of Universal scale - the restoration of the true conditions of model existence on our planet, freed from the oppression and consequences of the interventionist seizure from outside. Extremely large-scale in their depth and essence, time and space, complexity and jewelry precision, - these are the processes of real embodiment, taking place basically without a speculative feeling by people, but this is only for now. In the near future, the associated influence of the already accomplished changes in the energy and structural parameters and forms, the elimination of all basic imported energies, the destruction of all complexes and objects of management and control of the interventionist System - all this will inevitably lead to a fundamentally different state of the entire environment. Humans of the Planet will find themselves in completely different living conditions. The entire System of interaction, management and control of the existence of the material world with the energies and processes of higher octave energies will completely change. In practice, Man will be recreated again, will find his true purpose on Earth, will cease to be an object of application and use, will take his true position in the general Harmony of the Earth Model. All this is already happening now and beyond our ability to influence what is happening. This should be accepted as a given, sent from above, but no longer from the outside.

All this will take very little time. We were allowed by the recovering System to inform us that the transition period is only 12 years and this time has begun! It will be an incredibly difficult period, a time of changes in everything that we are used to and what we have learned, what we were able to and what we aspired to, what we dreamed of and what we planned. Everything will change, but this is not some kind of mystical apocalypse. Absolutely not! A person will receive caring and powerful support, but this does not mean receiving manna from heaven. We will have to overcome many difficulties, to rediscover the true World, to acquire new technologies of a higher level and order, to redevelop our native Earth in completely different environmental conditions.

Within the limits of the possible informational limitation, we have set forth an opinion that is based on true information from the System. It is not a dogmatic instruction for future action of the Structural Authority. Elements of initiative are welcome. We realize and believe in good intentions, those who will be able now to feel the true essence of what is happening and take responsibility for the destinies of all those who will be destined to remain in these difficult conditions. We do not pretend or hold out any intention of power in such a situation, but we are ready to assist those who will be able to lead the people.

TABLE OF CONTENTS

Annotation.....	2
Introduction. Does humanity have a future?	3
Chapter 1. Conceptual Power of the old Program.....	14
1.1 Nature and Essence of Conceptual Power.....	17
1.2 What is The Meaning of the completed (old) Program.....	24
1.3 What is the Essence of the completed (old) Program.....	27
Chapter 1 Appendix:	
1. Science as an engine of progress. The role of science.....	32
2. Measure.....	40
3. Formation of a space for human life.....	41
4. Control System or Supersystem.....	44
5. Brain matrix of genotypes 42, 44 ("golden billion")	57
6. Software Management.....	62
Chapter 2. Conceptual basis of the economy in the formation of Humanity of the future.....	68
Introduction.....	68
2.1. The true hidden causes of the formation of societies and states.....	70
2.2. Harmony of Man, harmony of society.....	75
2.3. Role and function of the Economy in the societies of the past.....	82
Chapter 2 Appendix 1	91
Chapter 3. Economy of Humanity.	
Introduction.....	93
3.1. Foundations of the formation of Humanity as a single structure of social organization.....	93
3.2. Strategy of the new Economy of Humanity, as a subsystem of the unified structure of the social organization.....	104
3.2.1. Why is it impractical to assess the material resource base?.....	104
3.2.2. Current state of the power management and organizational resource.....	105
3.2.3. Strategy of the Human Economy for the transition period.....	109
3.3. Economy as the goal and basis of the unified structure of the social organization of the Humanity of the future.....	121
3.3.1. Economy of Humanity is a way of searching for and developing optimal non-traditional integrated solutions in a dramatically changing environment	121
3.3.2. Economy of Humanity excludes the existence of political power in the previous incarnation.....	123
3.3.3. Economy of Humanity - the basis for other principles of definition and evaluation of values.....	124
Chapter 3 Appendix 1.....	128
Conclusion.....	146
