

REFLECTIONS ON A GIVEN TOPIC

ACCORDING TO THE ARTICLE BY F.D. SHKRUDNEV 042-369

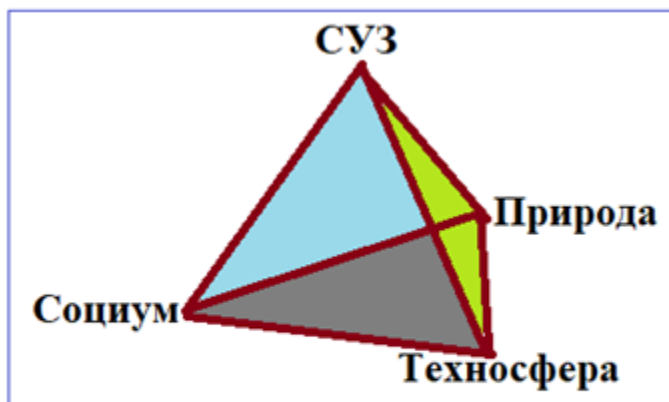

MANAGING LEADERSHIP

*I'm surprised: how stupid people are,
And how insignificant is the futility of their path...*

*They give on credit — counting every ruble,
And time - no one will return to them ...*

SENECA

Proceeding from the fact that the world is systemic, therefore, in our analysis we should proceed from the fact that we must present the object we are analyzing in the form of some system or its important part as a subsystem and conduct analysis from the standpoint of system knowledge. Further, again from a systemic standpoint, it is necessary to consider the real situation associated with this studied (focal) object that is in the focus of our attention. And, since the world is systemic, representing something integral, any object of attention we consider should be connected with other systems and these connections between them should be reflected and taken into account, only then will we be able to understand which or which part of the system controls the rest or is necessary for the functioning of the entire system and each of its parts. Our world on Earth, as a system, consists of two parts: the natural one, which

includes the biosphere and society, and the technosphere – an artificial world that increases the capabilities of a person who has declared himself the King of Nature, but who refers to the biosphere as a conqueror, and not as part of it, giving him the opportunity to exist and develop in this world in accordance with the situation organized by people (Fig. 3.).

Рис. 1. Система Земля.

Суз/CPS, Природа/Nature, Техносфера/Technosphere, Социум/Society
Рис. Система Земля./Fig. 1. The Earth System.

As is known, the entire system is controlled by the Earth Management System (EMS) (Fig. 1.). At the same time, at first, interaction was observed between all subsystems of the system, ensuring the harmonious development of all subsystems. However, over time, nature began to take revenge on subsystems – **society** and the nascent **technosphere** for violating the harmony in which it existed for millions of years, and man did not see and did not realize his responsibility and significance in this, as well as a special problem that will manifest itself fully in the future, because they develop as antagonistic systems (fig. 3.). He simply changed his place of residence, creating along the way many tools for a successful fight against Nature, which resisted his revenge, ruthlessly destroying it in his path, taking a leading position in the fight against it. So, for a hundred years of the industrial revolution, humanity destroyed 15% of the biomass of the biosphere, which formed over billions of years. At the same time, the rate of destruction has only increased and now, like a snowball, it is continuing to increase, leading to the disappearance of many species of animals, plants - representatives of flora and fauna. The Ebers, using the appropriate tools at a certain time, generally plowed the oases of the Sahara to a depth of 50 m, where now there are only sands...

Having felt himself the Ruler of our World, man began to look for a replacement for this wordless being, called Nature, for a system in the form of a non-natural (artificial) world (BPM) of inanimate matter, leading the BPM and the "Ruler" itself to a dead end and to extinction... All this is reflected in the worldview of the representatives of society.

And the author is right that *"with the beginning of a new era, new thinking began to give way. The world is beginning to be understood as a whole **NOT IN RELIGIOUS and philosophical terms, but in political and economic terms**".*

Civilization, as a Suprasystem, controlled by the old system of control systems through the pyramid of power, had to keep all its subsystems under its control, which directly act on the performers, dividing them into "**golden billion**" and "**golden million**".

To do this, it must be able to regulate all flows of energy (E), matter (V) and information (I) in accordance with its program (main goals), managing systems as needed by the Suprasystem, because all systems in the Suprasystem "work" only for it. These functions are performed by system-1 and system-2 (see Fig. 2), which make changes in the flows (EVI) at the right time for it. At the same time, they are managed by the system-0 - *the pyramid of power* of world governance (*see Fig.4*), headed by a certain structure of individuals of **Brain genotype 442** — the "**Nadiudean Priest¹**", which, using its working organs (media, organs for processing any information included in the System), transmits already processed streams of E, V, I flows to the systems which need to be processed (destroy, bind to its system, etc.), subjugating them to itself through manipulation of people's consciousness, but holding power over them by violence and its ignorance, remaining "invisible" to everyone.

структуры общества/structure of society

Целостные Знания/Holistic knowledge

Частичные знания/Partial knowledge

Фрагментарные знания (кусочные)/Fragmentary knowledge (piecemeal)

ПИРАМИДА Владения знаниями/PYRAMID Possession of knowledge

At the same time, the Global Predictor and the Nadiudean priesthood have holistic knowledge. The elite already have partial knowledge and strive to get to the top of the pyramid. And the people (crowd) have only fragmentary knowledge, like pieces of glass in a kaleidoscope: turn - one picture, turn again - a completely different picture...

As emphasized in the article, the integrity of the world and the understanding of its unity was given only by its religious perception and comprehension. With the advent of new thinking, the perception of *political and economic systems* was added to the integrity of the perception of the world, which, through power and money, ignoring the completely **SUBJECTIVE FACTOR** and its illegitimacy, continued to preserve the existing System and its management through force accompanied by Complexes and was accompanied by **Control Complexes** (the Caucasus and the Alps), forming a programmatic, individual and associated "program-object" mind that orients all individuals of the planet not to the true objective reality, but to a **ARTIFICIALLY CREATED** one designed by the System, applying **PROGRAMMATIC INFLUENCE** on people — the "division of labor" as a model construction of social inequality.

The programmatic acquisition of social status and the division of labor, according to Brain genotypes, played a truly **LEADING ROLE** in determining the construction of statehood and establishing all the legal foundations of the existence of societies without the participation of the subjective factor and its mind, with strict provision and support of Control Complexes.

Regarding the issue of history, the author writes: "It is proved that Humanity does not exist — it does not have a iz(s)torii. At least — not from iz(s)torii BC. And so, it is.

So, by order of the Vatican, Scaliger wrote an ancient history, where all the priorities were set the way the Vatican needed, and which did not correspond to reality.

And what seems objective today, as the author writes, is actually a consequence of the destruction of everything that was built within the framework of the old Control System to achieve a specific goal that is **NOT REALIZED**, ever.

The weapons used to fight in different epochs within our civilization were determined by its needs and the laws of the development of technical systems (see Fig. 3), related to the level of knowledge of the world in the specific period of development of the technosphere itself. At the same time, the "formula" (the content of the essence) of any system did not change, but the filling of one or another of its organs with new physical content changed (as new laws, phenomena, physical effects were discovered). For example, at whatever stage of development there is a technical system, (at the level of dimensional scale – a solid, a liquid body, a powder ..., molecules, a pre-atomic state, fields and, finally, primary matter ...) a necessary condition for its fundamental viability is the presence and at least minimal operability of the four main parts of the system: the engine (**D**) (or energy source), transmission (transmitter or converter (**T**) of the type of energy), control unit (**OU** or **SU**). or controls and a working organ (**RO**), from which the synthesis of the system itself always begins (Fig. 5.). At the same time, the system processes the Product (Izd) – the people of Society, obtaining the desired result (product) of appropriate quality. *The quality of the products issued, became the quality of people who consumed them.*

The model of the technical system shown in Fig. 5 is the law of completeness of the parts of the system. It is also valid for the system just considered (Fig. 2.). Schematically, it can be written as:

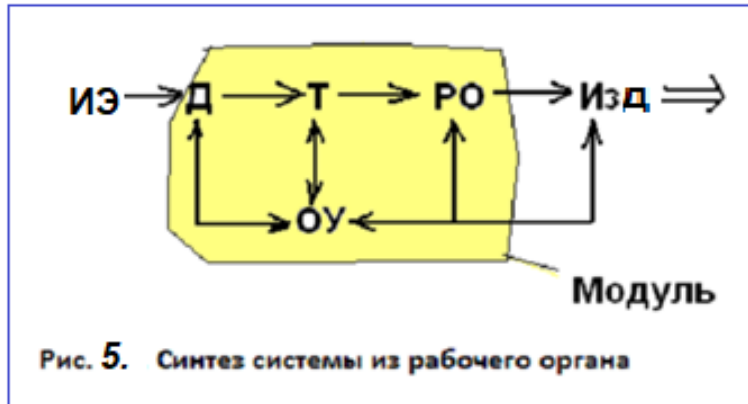

Fig. 5. Synthesis of a system from a working organ
ИЗ/From, Изд/Ed, Модуль/Module

Initially, any wars are waged not only for material values, but also implicitly for the consciousness of the conquered people, so that they obey the conqueror, and this was achieved with the help of crude weapons and violence or “carrot and stick”.

In our time, the war is waged by information – a weapon more subtle than that used in all wars, moreover, without much violence and acting directly, paralyzing consciousness (the last bastion in centuries-long wars), since this is the only and universal weapon in the struggle for consciousness. As the author of the article notes, *the soldiers of this war are directors, screenwriters, composers, writers and other workers of the creative "factory". At the same time, creative merchants and creative performers **DO NOT SUSPECT** for what purpose, for whom they work and what tasks are solved through this!*

And it is very accurately noted by the author: **Only the system can resist the system**. The information army can be opposed by another information army, as a counter-offensive... But it is unlikely it will be possible to create it specifically with a wide range of tastes and preferences. It seems that the most promising way of developing any systems and introducing them into society is the way of **knowing the laws of their development**. And **all systems, as you know, are synthesized and developed according to laws that can be known and used for the systematic development of improved systems, without regard to inspiration, God's revelation or chance...**

Individual geniuses are **NOT QUOTED** for many reasons... Their destiny is to look for new ways of developing civilization in accordance with the laws of Systems development, which will be the criteria for choosing the right path of Civilization development.

The author of the article very accurately notes: **IT'S TIME** to thoroughly push the "cuckoos", and instead of the soap-porn-bloody "cheapies" planted on us, give people a quality product that carries love, kindness and a sense of pride in the work of human hands.

And further... "The quality of the products, became the quality of the people who consumed them"! This is where the reason for the production of the "cuckoo" shaft is".

And another very important problem. The fact of raising the retirement age is not accidental, because here the authors of the idea solved their global tasks.

By raising the age of men, they will save the entire fund of funds for solving some of their tasks, because a scanty number of men live to 65 (in Siberia in the 1990s, the average life expectancy of men in rural areas was 54 years old. Today's men cannot form a division like the one that defended Moscow in '41). Raising the retirement age of women deprives most children of grandmothers, who are the keepers of a joyful and bright childhood, transmitters of traditions, Russian patriotism, guardians of family hearths. Grandmothers are no longer able to work until the age of 60, due to their health, to help their children nurse grandchildren, because their parents will be 20-30 years old at this moment: retirement is still far away, and grandchildren will have to go to kindergarten, nursery. When the children will be able to come to a retired grandmother tired of work, the child will already be 30-40 years old. The one who prepared for this task worked for the pyramid of power and is the most dangerous enemy and criminal of society. Because he understood what he was doing... As for the money, it is enough to pay the increased pensions, still there will be enough for development and even to buy the US securities, helping the US economy, which is what the accountant Nabiulina of the Russian Federation is doing...

I completely agree with the author. The Russian inheritance should not be treated so carelessly, the way it is done by those who by chance, and not by virtue of their merits, ended up at the pinnacle of power.

And this is all that needs to be changed. Change within the current state.

We must unite under the governing Leadership of worthy people and win this war in order to live, to revive and help our Russia recover from a serious illness and together with it step on the path leading Civilization along the path of Intelligent Development. And remember that time works for us and only it is our property.

I.M. Kondrakov
