

Reflections on a given topic: (About the article by F. D. Shkrudnev "Salvation of the Saviors (28_series 369) CHESSBOARD")

Author: I. M. Kondrakov

YOUR MOVE...

Another article by F. D. Shkrudnev has been published, which systematically covers many features and aspects of the process of cognition and understanding, in particular, such a phenomenon as Politics. The legacy and co-creation with A. I. Yuryev, a professional scientist, once again showed that such types of human activity as **politics**, which was attributed to the field of descriptive sciences based only on factual material, allows us to consider and analyze it as a **developing system**.

"... science evolves from funeral to funeral."

M. Planck

Sadly, Max Planck was right when he said that the life expectancy of real scientists and pseudo-scientists is a brake on the development of our ideas about the world. This is on the one hand. On the other hand, **our ABC truths**, absorbed by us during training, if we are trying or have tried to learn something in this world. Our faith and recognition of the abc truths verified by someone eventually generates **psychological inertia** in the process of cognition of the world and solving creative tasks, problems, which eventually hindered our development, and hence the very Cognition of reality. Unfortunately, we are not taught anywhere, for example, creative technologies, in particular, a systematic approach that allows us to see the problem as a reality at many levels of its being, and, "if there is no coverage of the entire chessboard" — the field of action of our Mind, with a real picture of the world, it is impossible even to think the right course of thought when cognizing it. Nowadays, the surrounding reality makes us a challenge to which we must respond with our knowledge and understanding of such a system as Politics, which divides us into a number of parts, from indifferent to each other to antagonistic, therefore practically interacting poorly with each other and leading to disharmony.

In the current conditions, as the author of the article notes, one component is missing — a **global idea** that will unite all participants, and not only in our country. It will be the main vector of the development of civilization under modern conditions.

In the article, all kinds of understanding are collected and considered at the level of knowledge and understanding of their essence, because the **purpose of understanding, as the author notes**, is to comprehend individual phenomena in their mutual connection, to **understand** the **whole**, the parts of which make up this phenomenon.

The systematic approach used by the author makes it possible to highlight the true goals of the processes currently taking place, in particular, under the projects "Ukraine" and "Coronavirus", the purpose of which for the Old system is to restore the initial conditions for the implementation of the main task of the global world — the destruction of excess population. But they won't succeed. But people have to learn in the new conditions of political reality. Everything they know today, are able to understand, what they own, **what status they have — will be "zeroed out."**

Прошлое Настоящее будущее/Past Present Future

Throughout the article, the author adheres to strict logic, and most importantly, the entire text is based on taking into account the laws of the development of systems and their features. For example, the **Law of Transition to a suprasystem.**

It says: **having exhausted the possibilities of development, the system is included in the suprasystem as one of the parts; at the same time, further development takes place at the level of the suprasystem (Fig. 1.). And all subsystems and systems work for the goal vector of the Suprasystem.**

Knowledge of laws or patterns allows you to use all 12 types of understanding, for example, the **3rd type of understanding is "anticipation of subsequent information, because there is always an opportunity to take at least a step forward towards the Truth.**

This approach allows you to see reality at all levels of the hierarchy of systems: at the subsystem, system and suprasystem level (Fig. 1), as well as the direction of the vector of the system development goal.

In addition, it is important to see the real state of the system in the **past, present and future.** That is why the chessboard on which politicians play should not be flat, but "voluminous," consisting of many sublevels (Fig. 1.): **NS** — suprasystems, **S** — systems, **PS** — subsystems (**PPP-subsystems, PPPS, etc ...**). That is why it is so difficult to understand information only of a factual nature, the **level** of its understanding (facts, deeds, dates, names), but its real essence is **hidden at deep levels: context, subtext, sacred knowledge, causing political behavior.**

The existence of two worlds - the real one, in which a person stays most of the time, and the media one plus the computer one within the monitor screen, which reflects an invented unreal world with its goals, often not coinciding with the goals of the real one and dividing society into a huge number of small worlds with their own sets of goals.

Let us introduce the notion of a "**useful function**" - a function acquired by a system as a result of development and aimed, due to prevailing conditions, at increasing the efficiency (main function or Goal Vector) of the system itself, with its Goal Vector (GP) coinciding with the Ideal Final Result (IFR) of the system (see Fig. 2).

All useful functions (Ufn) "work" on the system's goal vector. Useful functions (Ufn), which are close to each other in content, supplement each other to obtain the "expediency which will allow the system to solve the problem in the shortest possible way, striving for stability and harmony of its parts among themselves and with the external world.

Here is one of the important thoughts of the article: "The mistake of reading is that it **involves memorizing and acting "within the limits of this information."** And **understanding means "going beyond this information"** — working with what is not in the text, in the information you received outside the text (audio, video)." The article presents different types of information, they reflect a more complete real picture on the "chessboard," which is also limited, allows you to see and take into account a picture closer to reality than the one that the brain creates on the basis of memorization in the process of cognition.

In order to find and continue to follow the path of Intelligent orientation, understanding your choice and seeing the problem from the perspective of the chessboard that will allow you to solve the problem taking into account reality, you need to move away from a simple sum of knowledge to a real model of the known world as part of its picture.

And here the factual information accumulated over the past centuries is no longer enough, methodological information is needed so that the accumulated knowledge becomes understanding for those who possess it and can continue to walk independently along the path of self-development, self-awareness and understanding of themselves as individuals and their chosen path of Rational orientation, as the most rational in the current conditions, turning as if to **everyone who cares about the future: Your move...**

I. Kondrakov
