

## 2.08. "SvetL" Technologies and Recreation of Water

Author: Zhuravlev, V.V.

LET ME EXPRESS AND PROVIDE MY VIEW on very IMPORTANT (in my opinion) issues related to the "SvetL" Programs.....

In the second part of the answers to questions about the "SvetL" Complex, Fyodor Dmitrievich Shkrudnev was asked a very important and interesting question: **"There is a "SvetL" Complex and "SvetL" Bracelets, which, among other things, structure water and free food of toxins. It is clear about water in general, but in the last Q&A it was said: "use spring water, not tap water, for example".**

**What is the difference between spring water and tap water after it has been exposed to the Generator? Both are dodecahedral in structure after "treatment". The toxins contained in tap water also seem to have been removed. What do the differences relate to? Its non-toxic, but still having a detrimental effect on the functioning of the human body, components (then what?). Well, and the components themselves that determine the taste qualities, because the taste of both waters differs significantly even after exposure to the Complex. Right?**

**And food toxins? What toxins does the Complex and the Bracelet remove? Mercury is a toxin for the wearer. Does it remove mercury? And what happens to it? "Does it 'transform' into another element?"**

The questions are interesting, so you need to cover them in detail. At the same time, it is necessary to rely on the Works of Alexander Mikhailovich Khatybov, as well as on the research of some foreign scientists who have come to understand the "external" properties of Water in their own way.

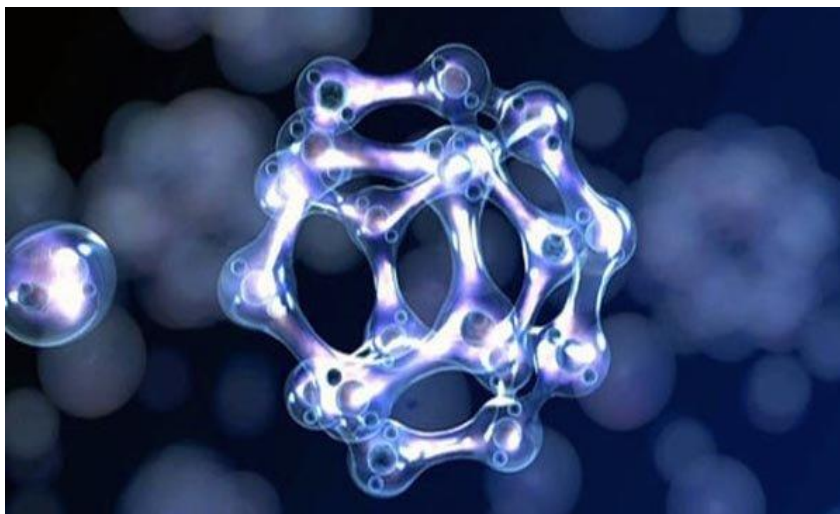

For complete clarity, I recommend reading Masaru Emoto's book about the unique properties of Water. It can be found and downloaded on the Internet without much effort. And to the reader's question about Water, everything will be said below, in the process of research.

And so...

*"Water is not a simple mixture, but a complex structure. If water is used by a biostructure, that it has the necessary octaves of frequencies and energy characteristics on which a living cell of the biostructure is built."*

Here you need to understand that each person, of course, has his own characteristics: level of development, genetics, state of his health. To maintain the balance and stability of the body, we use Water. However, what it is and of what quality, we should think about it more seriously.

And yet: what is Water and how does this topic relate to the treatment and Purification of "SvetL" Water.

If we analyze and study certain information, then, unfortunately, we can draw bleak conclusions about the content of poisons, toxins and contaminants in tap water and more. There are no pure natural sources left, to one degree or another, that have not been subjected to destructive Human activity.

And here is just an approximate list of contamination of tap water: chlorine, lead, copper, mercury, arsenic, various pesticides, infections. And much more. There is no need to talk about the presence of iron in the Water.

And most of these contaminants will not be retained or cleaned by any filter. Moreover, there is another component of pollution. Both at the level of chemical composition and at the level of energy-structure.

And it will be important to understand this in order to answer questions about the quality and structure of Water.

The fact is that the Water lattice structure has a given reference state (you just need to remember that this state changes with changes in the CPS control parameters). It really is different in different geographical and climatic zones. However, in this case, all toxins and impurities are foreign bodies that are not inherent in the structure of Water. Moreover, they bend the dimension at the level of microspace and change the lattice, that is, the structure of Water. Of course, for the worse, in fact, destroying the stable state of the environment of the molecule (cluster) and introducing negative adjustments to the properties of these same molecules.

And, after a Person regularly consumes such Water, this leads to serious illnesses. And Water has memory. Here is one example:

In the Middle Ages, the recipe for "Evil Water" was known. No one swore at it, but it turned into a deadly poison due to the fact that, for example, a bottle of arsenic was left next to a glass of Water. And after a couple of hours, the Water acquired the structure of poison. Like this ...

This is important to note here, because the water comes from the water supply directly to the apartments. It is already treated with chlorine and other substances. The water supply goes down the street, which allows it to absorb all the negative energy of the city. In addition - rust from pipes and many other things. As a result, tap water already carries negative energy. And it is unlikely to be useful for us.

What happens when structuring Water using the "SvetL" technology?

First, it is necessary to distract from the usual ideas about the Nature and properties of the usual chemical elements and chemical reactions. Because the real structure and processes taking place in life are completely different. Rather, they are built on completely different laws and principles.

It is advisable to collect Water for processing Technology from the Source. A spring, or even better - from a Spring located in the forest. Purchased bottled water, boiled water, moreover, no longer have the same structure and lattice.

In part, answering the question posed to Fyodor Dmitrievich about the "difference in Water", it should be noted that this difference is observed at the level of frequencies, potentials (one can say - **qualitative structure**), with which the Water is saturated. There may also be such a statement: the level of saturation with matters that have certain qualities. And the properties of the impact on a specific "goal".

In fact, at best, the purchased Water will not only make it worse. It certainly won't be better. And an obvious example can be given: anyone who has tasted water, or used it to make tea or coffee from an office cooler, really "appraised" its taste qualities: tasteless, "bland", completely neutral. There is no living structure there at all. And here it is also interesting to note about the taste sensations.

Because a person always strives to improve his Life. And our genetic memory of pure natural sources and uncontaminated food pushes us to search for new ways and opportunities to improve the quality of the products we consume.

Here, for example, is an interesting fact: boiling water from a samovar... It is completely different than boiling water from a kitchen kettle.

Because the shape of the samovar itself (almost always the same for everyone) bends and changes the level of dimensionality of Water clusters, endowing them with certain properties. And the tap, for draining boiling water, is almost always located just below the middle. In fact, there is a harmonious distribution of flows of matter and their descent "from the core" - the center of the samovar.

No less important detail: the coloring of the samovar. Most often, medicinal herbs, berries, and fruits were depicted there. Because the master manufacturer transmitted the image of these healing Gifts of Nature to his Product and, in fact, set a psi program for Water: to get enough of the "image" and properties of these medicinal plants! And in favor of this statement is also the fact that it was not so often possible to find a silver samovar, even among the nobles and wealthy people. What does this mean?

There was no such urgent need for the destruction of pathogenic microflora in Water. And in Europe, silver utensils were widely used by the Nobility. There's a lot to think about.

And now back to the topic of the difference between Water from different sources. Its differences will be at the level of frequencies and energies. And "by chemical" composition. You won't see it visually.

That is, what happens? The ideal option is to find the outlet of the source, or Spring, next to the outlet on the surface, the Source of Life?! Of course, it is. This is an ideal option.

But ... it's not really that bad.

Because, in the previously published articles "[FROM\\_NA Chala](#)", it was indicated that the "SvetL" device is a portable, individual cluster-a cell of the source of Life. In fact, it is the output of a Life Source for a wide application, for a specific user - the Owner of the Device.

Therefore, it is possible to recreate Water by structuring it with the Psi Field of the device.

And it will no longer be so fundamentally important what kind of Water to use. Just a tip: filtered. It has already been partially cleared of some impurities and has not yet completely destroyed the structure. It is undesirable to use boiled Water. It is, as a structure, dead.

You don't have to be near the treated Water. It would be worth paying attention to the advice of Fyodor Dmitrievich about the fact that it would not be superfluous to give your loved ones this Water to drink. It will also be useful!!! And here ... just a storehouse of information!

First, it means that after treatment, the Water will already adapt to any person. To make it clearer, the following will happen. Take, as an example, an ordinary family: "There is a cup of water on the table. The water was under the psi field of the device for two hours. The son took a sip of water - the dodecahedral structure of Water was rebuilt to fit the Essence and his problems. The same thing happened when the father and mother drank Water from the same glass. The Water structure has been rebuilt to meet the needs of each family member."

This has not been mentioned before. But it is worth saying that Living Water under the influence of Technology not only heals, frees the body from poisons and toxins, waste products of infections, but also changes the structure of the Human Genetic Code. This is consistent with the information from the Works "Fundamentals of the Formation of Humanity": "the era of genetic and informational development of Mankind has begun."

In fact, positive mutations occur in the Person himself. No viruses, infections and toxins can resist the high-frequency structure of Water. Moreover, the properties of blood plasma and lymph change. Such Water gives them new properties and qualities. This is also important to understand. Therefore, the processes of cleansing the body are so active. And this is only a small part of the positive "parameters" of Water from under the influence of the device.

Secondly, you need to pay attention to one nuance. How does this happen? A person drinks Water, does not take vitamins and still heals? The fact is that even the doctors themselves admit that in addition to the well-known and recommended vitamins, there are hundreds of unknown useful trace elements necessary for human health.

And it is worth paying attention to this phrase: "The main question is whether it is possible to use new water? Yes and no! The new water contains a different quality of structure and billions of times more frequencies than the one to which "everyone is accustomed". But in the new water, the composition of the ions is different, although there may not be any differences in appearance and spectrum" (A.M. Khatybov).

It is important to understand that when ingested into the human body, some part of the Water, as a structure, breaks up into certain streams of matter, saturating certain levels and certain organs and systems of a Person. All the "new frequencies" are vitamins. You don't even need to put parentheses. Vitamins of the future, most likely, will not have a physical projection, like multicolored roundels in plastic.

After all, "SvetL" saturates the essence of a Person with streams. The necessary flows are redistributed to the specified positions. Over time, morphological changes occur in the cells. Which leads to the healing of the selected organ.

And the water, purified and Recreated by the device, not only removes toxins from the cells, but also supplies them with all the necessary frequencies and elements as their components.

Although, of course, it is worth continuing to eat vegetables, fruits, nuts, honey. And beekeeping, by the way, is also a strategic industry. This is a storehouse of vitamins, the most useful substances and Mega-Natural Antibiotics. Such as **propolis**, for example.

And one more thing: now you don't need to throw away vitamins bought at the pharmacy. Put them under the influence of the device for 30 minutes, next to it. And then they will be much more effective. But this applies to vitamins, not medicines and various supplements.

In relation to the topic of Reconstruction (processing) Water is "SvetL", you need to understand that all the necessary frequencies (potentials) are already present. And a Person is saturated with them and is healed. This is just one of the facets of the Healing process. In any case, the structure of the Recreated Water already changes a lot in the Person himself.

And various spells, "ancient secret devices for influencing Water," are ineffective. There are many reasons, but the main one is IGNORANCE and MISUNDERSTANDING.

Maybe in this article there will be the Keys of Truth for those who are looking for Knowledge about the Gift of Nature - Water.

And not quite on the topic, but it must be said: it is pointless to study the works of A.M. Khatybov without first passing through the Knowledge and Understanding of the Natural Processes of Nikolai Levashov.

Those who read, leafed through and considered themselves already an "expert" and encountered the works of A.M. Khatybov and did not understand anything, began to write angry reviews that everything that was written was too complicated and did not agree with the Works of Nikolai Levashov.

It does not just agree, but completely complements and reveals them at an extremely different level of Qualitative Understanding. And it will continue to get harder and harder. In terms of perception. This is why “SvetL” will serve the owners of the devices.

**Think, Develop. There is no other way ...**

**After all, we have a unique opportunity for healing and Development. And it's worth taking advantage of.**
